BEFORE THE  
OIL CONSERVATION COMMISSION  
SANTA FE, NEW MEXICO  
*Shell* EXHIBIT No. 4  
CASE 17-18

Attention: Mr. R. R. Robison

Gentlemen:

Your letter of February 27 advises that there is one producible oil well on lease Santa Fe 078065 and that in order to save the expense of providing oil measurement and shipping facilities on the leased land, you plan to lay a flow line from the well to the central plant on lease Santa Fe 078066 where a gas separator, a positive displacement meter, and automatic sampler will be installed to measure the production from Santa Fe 078065. The metered oil from such lease would then be commingled with the oil from Santa Fe 078066 for pipe line shipment through an automatic custody transfer station. You request our approval of the proposed measurement and shipping facilities.

The method you propose for measuring and shipping production from lease Santa Fe 078065 is hereby approved.

Very truly yours,

*John A. Anderson*
