Oil Conservation Commission
The State of New Mexico
Capital Annex Building
Santa Fe, New Mexico

Gentlemen:

In accordance with Section 12 of the Unit Agreement for the Development and Operation of the East Bisti Unit, San Juan County, New Mexico, Skelly Oil Company respectfully submits for your approval a preliminary plan of development and operation of the subject Unit. As the Unit did not become effective until October 1, 1963, plans have not been fully developed particularly as to those areas adjacent to unqualified tracts within the Unit area.

Water Source

Water source for this project will be the Allison-Menefee formation found at a depth of approximately 3200 feet. Four wells with a capacity of 6000 barrels per day each will be drilled to furnish an injection capacity of 24,000 barrels per day. Other water sources in the area were considered and found to be uneconomical when compared to the Allison-Menefee.

Injection Facilities

Injection facilities are being designed to inject up to 24,000 barrels per day at a pressure of 1200 psi.

January 6, 1964

All injection lines and injection well tubing will be internally coated to protect them from corrosion. Construction of injection facilities is scheduled to commence as soon as the severe winter weather is past. Twenty-two wells will be converted to injection in a modified line drive pattern as the first stage of development. It is anticipated that additional wells will be converted if satisfactory line well agreements can be negotiated with outside operators. Six wells in the easternmost part of the Unit area will not be converted to injection until performance data from the first stage can be evaluated.

Injection into Unit Well Nos. 1 and 7, which offset Shell's Carson Unit, began in December, 1962, and as of December 28, 1963, 203,532 barrels of water have been injected into both wells. Injection into these wells is continuing.

The attached map shows the arrangement of the proposed injection pattern.

Yours very truly,

H. E. Aab
District Superintendent

All Working Interest Owners

Gentlemen:

In accordance with Section 12 of the Unit agreement for the Development and Operation of the East Bisti Unit, San Juan County, New Mexico, Skelly Oil Company respectfully submits for your approval a plan of development and operation of the subject Unit.

PAST OPERATION

The East Bisti Unit became effective October 1, 1963 with Skelly Oil Company as Unit Operator. Injection facilities were constructed and injection of water into 24 injection wells commenced during February, 1965.

Cumulative water injection to November 1, 1965 was 4,193,152 barrels of water. The daily average injection rate during October, 1965 was 17,667 barrels.

Cumulative oil production from the Unit area was 5,946,789 barrels on November 1, 1965. The average daily producing rate during October, 1965 was 525 barrels of oil.

DEVELOPMENT PLANS FOR 1966

Work has been started on cathodically protecting the casing of unit wells from corrosion. This project should be completed during 1966. The Working Interest Owners are presently being balloted for approval of a plan to install LACT and well test facilities to serve the producing wells. This project should also be completed during 1966.

Plans are for the continued injection of water into the present injection wells. It is not anticipated that any additional wells will be converted to injection or any wells will be drilled during 1966.

Yours very truly,
SKELLY OIL COMPANY

All Working Interest Owners

Gentlemen:

In accordance with Section 12 of the Unit agreement for the Development and Operation of the East Bisti Unit, San Juan County, New Mexico, Skelly Oil Company respectfully submits for your approval a plan of development and operation of the subject Unit for 1967.

PAST OPERATION

The East Bisti Unit became effective October 1, 1963 with Skelly Oil Company as Unit Operator. Injection facilities were constructed and injection of water into 24 injection wells commenced during February, 1965.

Cumulative water injection to November 1, 1966 was 9,816,623 barrels of water. The daily average injection rate during October 1966 was 13,562 barrels.

Cumulative oil production from the Unit area was 6,124,018 barrels on October 1, 1966. The average daily producing rate during September 1966 was 567 barrels of oil.

Work was completed during November 1966 on cathodic protection for well casings of unit wells, water injection lines, and the oil gathering system. LACT and well test facilities were installed during 1966.

DEVELOPMENT PLANS FOR 1967

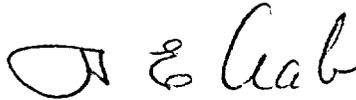

Plans are for the continued injection of water into the present injection wells. It is not anticipated that any additional wells will be converted to injection or

OPERATION & DEVELOPMENT
East Bisti Unit- 11-11-66

Page No. 2

any wells will be drilled for recovery wells during 1967. A study will be made to determine the feasibility of a supplemental water source in order that the injection rate can be increased.

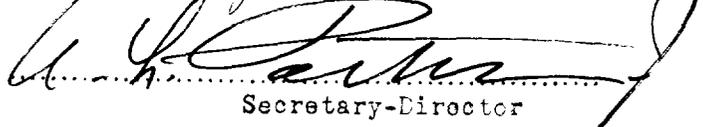

Yours very truly,
SKELLY OIL COMPANY

H. E. Aab, Chairman
Working Interest Owners Committee
