RE: Permit Application to State of New Mexico Oil
Conservation Division for operation of a Land Farm Facility:

Tierra Environmental Company, Inc. (TEC) is applying to the State of New Mexico Oil Conservation Division (OCD) for a permit allowing TEC to operate a Land Farm Facility. OCD Rule 711, requires that land owners, located within one half mile of the proposed facility be notified of the pending application by the applicant.

The proposed Land Farm will be located in San Juan County, on Crouch Mesa, in the South East Quarter of Section 2, T29 N, R 12 W.

The Land Farm intends to accept non hazardous oil field waste solids and soils as described in RCRA Subtitle C or by characteristic testing analysis. The material will be applied to the land and naturalized by atmospheric exposure and or by the addition of micro organisms designed to neutralize any contaminants present. No liquids will be applied to the land farm. Berms will surround the facility in order to prevent any materials from leaving the location as a result of excess rain fall. The area will be fenced. The operation from a cosmetic view point will appear no different than a farmers field prepared for planting. Once the soils and solids are remediated (decontaminated), they may be used for top soils, fill, road base or some other normal use.

**RUNOFF CALCULATION FOR
TIERRA ENVIRONMENTAL COMPANY LAND FARM**

Area = 21.9 Acres

6 hr 100 year rainfall from NOAA
Atlas 2 volume IV = 2.1 inches

$21.9 \text{ Ac } (43560 \text{ Sq. Ft./Ac}) (2.1/12) = 166,944 \text{ Cu. Ft.}$

Estimate 50% runoff 166,949 Cu. Ft. $(0.5) = 83,472 \text{ Cu. Ft.}$

Estimate 83,472 Cu. Ft. of runoff in 6 hour period for 100 year storm

Top of proposed dike as shown on attached topo map = 5,881
Maximum depth = 3.25 Ft.

Holding capacity of triangular shaped area in northwest corner of
property = $0.5(320)(570) = 91,200 \text{ Sq. Ft.}$

Holding capacity @ 1' average depth = 91,200 Cu. Ft.
Holding capacity @ 1.5' average depth = 136,800 Cu. Ft.

Runoff estimated = 83,472 Cu. Ft.

Based on the above assumptions, the holding capacity is sufficient for the 6 hour 100 year storm
and the 100 year 1 hour storm.
