A. DRILLING PROGRAM - Page 2a

5a. Possible deviated - high angle - hole and target area.

Depending upon operator's assessment of geologic information by the time the base of the Mesa Verde has been reached with the bit, operator will select a target point within the below-described target area, and will at the base of the Mesa Verde (KOP) commence building angle at an appropriate rate which will reach the target point such that the hole will be within the target area from the top of the Niobrara A zone to total depth or to the base of the Greenhorn formation - should the Greenhorn be penetrated.

The target area is defined by four lines in Section 10, each 1650 feet from - and parallel to - its nearby section line.
