PROJECT ENGINEER G.W. Hunt DATE 7/19/93 APPROVED [Signature]

Cuba Mesa Unit No. 35-2
Rio Puerco Field
Sandoval County, New Mexico

Procedure

- 1) Move-in drilling rig. Install a centrifuge and a Cagle Shaker.
- 2) Drill 17-1/2" hole to 250'. Run and cement 13-3/8" casing as per drilling program. Reciprocate casing while cementing.

Note: Notify BLM at 507/327-5344 when the well is spudded.
Also, notify the BLM 48 Hrs prior to cementing casing.

- 3) Install casinghead on 13-3/8" casing, (13-5/8", 3000# x 13-3/8" SOW). Nipple-up 12", 3000# double ram BOP's (with pipe rams on bottom and blind rams on top) and annular preventor.
- 4) Prior to drilling out of surface casing, test BOP's, choke manifold, inside BOP, kelly cock, stand pipe valve, and kill line to rated pressure. Install wear ring.

Note: 1) Have a full opening valve and inside BOP on the floor for each size of tubulars being used.
2) Record BOP test on IADC report form.

- 5) Test 13-3/8" casing to 1000# (rated at 1730 psi)
- 6) Drill a 12-1/4" hole to +/- 2600', using a pendulum stabilizer assembly and shock sub. At 2600', reduce hole size to 9-7/8". Take surveys at 500 ft intervals. On last bit run prior to KOP, run monel drill collar above bit.

Note: 1) On the Cuba Mesa Unit #35-1, loss circulation 3125' and 3798'.
2) Install mud logger at 3000' (Subsurface Inc.).
3) Prior to setting 7-5/8" casing, install the following:
- Skimmer System
- Super Choke
- Air Compressor from Northwestern Air Drilling Service Co. (rated at 800 SCFM)

- 7) At KOP (3539') run multi-shot survey from TD to surface casing.
- 8) Log with DIL/Caliper.

Note: The Gallup "B-1" target in the Cuba Mesa Unit #35-1 pilot hole is at 4186 MD (4185 TVD). The surface location of the Cuba Mesa Unit #35-2 is 333' from the #35-1 in a direction of 327°. This projected Gallup "B-1" target in the #35-2 (at end of curve) is at 4599 MD (4234 TVD). The formation dip is 2.75 degrees in a direction of 355 degrees (downdip).

- 9) GIH with 9-7/8" bit, 6-1/2" AKO mud motor, 2 non mag DC's, 22 jts of 4-1/2" HWDP and 6-1/2" DC's. Build angle at 8.23 degrees per 100 ft. to 87.25 degrees at 4599 MD (4234 TVD) in a direction of 357.49 degrees. The casing seat will be the Gallup "B-1" target.

Note:
1) Notify the supervisor of the Aztec district office of the date and time of commencement of directional drilling operations.
2) Eastman's retrievable MWD & GR will be used.

- 10) Lay down 4-1/2" drill pipe and drill collars.

- 11) Run and cement 7-5/8" casing and parasite tubing (1-1/2") as per drilling program. Run DV tool at 2650'.

Note: Figure 1 shows how the 1-1/2" tubing is attached to the 7-5/8" casing (to be fabricated at A-1 Machine Inc. in Farmington).

- a) Step 1 - Cut end of a joint of 1-1/2", 2.76#, CW-55, IJ 10 Rd tubing at an angle to make a 7.2" (long axis) elliptical opening.
 - b) Step 2 - 1-1/2" tubing is welded onto the 7-5/8" at 4 ft. above the pin end of 7-5/8". The tubing is bent very gradually to run parallel to the casing. The joint of tubing is tack-welded with straps to the casing.
 - c) Step 3 - A piece of 2-3/8" tubing is split and welded over the 1-1/2" tubing. A piece of 8-5/8" casing is split and welded over the 7-5/8" casing opposite the entry position of the injected air.
 - d) All welds will be x-rayed, magnafluxed and pressure tested in shop.
 - e) Install the injection joint of 7-5/8" casing at 2500'.
 - f) As 7-5/8" casing is run, attach tubing to casing with an air bander at 10 ft intervals.
 - h) After cementing, flush 1-1/2" tubing with water.
- 12) Cut-off the 13-5/8" 3000# casinghead. Orange peel 13-3/8" casing onto 7-5/8" casing. Install 2" collar in 13-3/8" casing with a 2" 1500# ball valve.
- 13) Install tubinghead on 7-5/8" casing (7-1/16" 3000# x 7-5/8" SOW).
- 14) Nipple up 11" 3000# BOP's, annular preventer and rotating head.
- 15) Prior to drilling out of a 7-5/8" casing, test BOP's, choke, manifold, inside BOP, kelly cock, stand pipe valve, and kill line to 3000 psig. Test annular preventer to 1500 psig. Install wear ring.

Note:

- 1) BOP's to have pipe rams on bottom and blind rams on top.
 - 2) Have a full opening valve and inside BOP on the floor for each size of tubulars being used.
 - 3) Record BOP test on IADC report form.
- 16) Test 7-5/8" casing to 1500 psig (rated at 4140#).
- 17) The mud system will be an aerated KCl/Polymer system. Circulate through skimmer system. Maintain the solids in the mud as low as possible using Flo Line Cleaner and Centrifuge. Inject sufficient air down 1-1/2" parasite tubing to maintain a hydrostatic head equivalent to 5.5 ppg at TVD. The formation pressure of the Gallup is approximately 6.5 ppg.
- Example: At a mud weight of 8.4 ppg and a circulation rate of 250 GPM, an air injection rate of 500 CFM would be required through the 1-1/2" parasite string at 2500 ft, to maintain an equivalent circulation density of 6.1 ppg at a TVD of 4300 ft.
- 18) Circulate through skimmer system. Inject defoamer and demulsifier upstream of mud gas separator as needed. Monitor corrosion with coupons and adjust corrosion inhibitor as needed.

- 19) GIH with 6-1/2" rock bit, float sub, 1 - 4-3/4" non mag drill collar, 23 jts of 4", 14#, S-135 DP (with 3-1/2" XH tool jts), 40 jts of 4" HWDP (with 3-1/2" XH tool jts), 4", 14#, S-135 drill pipe (with 3-1/2" XH tool jts). Install wear ring. Drill DV tool and test casing to 1500#. Drill casing shoe and 5' of new hole.

Note:

- 1) The 4", 14#, S-135 drill pipe will be run in the curve and horizontal portion of the hole. The ID of the tube on the 4", 14#, S-135 drill pipe is 3.34". The ID of the 3-1/2" XH tool jts is 2-7/16" (OD = 4-3/4").
 - 2) The 40 jts of HWDP will provide 25,000 lbs of effective bit weight. The ID of the tube on the 4" HWDP is 2-9/16".. The ID of the 3-1/2" XH tool joint is 2-1/4" (OD = 4-3/4").
 - 3) Drill pipe design will provide 300,000 lbs of overpull.
- 20) GIH with 6-1/2" PDC bit, AKO mud motor, float sub, Geoservices MWD (with Gamma Ray), 1 - non mag DC, wear sub, 131 jts of 4", S-135 DP, jet sub, string float, 40 jts of 4" HWDP, and 4" S-135 DP. Install wear ring. Hold the 87.25 degree angle and azimuth of 357.49 degrees until a displacement of 3613 ft is obtained. The estimated TD is 7559 MD (4466 TVD). The mud log samples and Gamma Ray on the MWD will be used to determine the change in hole angle needed to stay in the target. The initial dip angle is 2.75 degrees in a direction of 355 degrees. At 1000' displacement, the dip increase to 3.75 degrees. At 1700' displacement the dip increases to 5 degrees.

Note: The bottom hole location will be 660' FNL and 660' FWL of Section 35, T 21 N, R 2 W. The horizontal displacement will be 3613' with an azimuth of 357.49 degrees.

- 21) If the well indicates to be commercially productive, a 4-1/2" slotted liner will be run. The holes in the liner will be drilled with two 3/4" holes per ft with 90 degree phasing. Leave 3 ft from each end blank.
- 22) Run 4-1/2" liner on TIW "L" setting collar. A TIW packoff bushing will be run one joint above guide shoe. After picking up 4-1/2" liner, hang-off liner in slips. GIH with TIW polish jt (15 ft), 2-3/8" tubing, pup jts as required to space out, and TIW "LN" setting tool.
- 23) After setting liner, displace drilling fluid from behind liner with lease crude mixed with emulsion breaker. To release setting tool from setting collar, turn to the right and POOH.
- 24) To test well, GIH with 2-7/8" tubing (install seating nipple on bottom of tubing). Hang off tubing 10 ft above top of liner. Swab test well.
- 25) Based on the results of the swab test, a pump will be sized and installed with a workover rig.

Gentlemen:

Enclosed is a copy of an Application to drill a second well in a Horizontal Directional Drilling Pilot Project Located in the W1/2 of Section 35 - 21 North - 2 West, Sandoval County, New Mexico, filed with the New Mexico Oil Conservation Division on behalf of Bright & Company. Records indicate you are an offset operator or lessee. This matter will be heard by the Division on Thursday, August 12, 1993, at 8:15 a.m. at 310 Old Santa Fe Trail, Santa Fe, New Mexico. Failure to appear at that time will preclude you from contesting this Application at a later date.

Very truly yours,

BRIGHT & COMPANY

Fort Worth, TX 76101

Gentlemen:

Enclosed is a copy of an Application to drill a second well in a Horizontal Directional Drilling Pilot Project Located in the W1/2 of Section 35 - 21 North - 2 West, Sandoval County, New Mexico, filed with the New Mexico Oil Conservation Division on behalf of Bright & Company. Records indicate you are an offset operator or lessee. This matter will be heard by the Division on Thursday, August 12, 1993, at 8:15 a.m. at 310 Old Santa Fe Trail, Santa Fe, New Mexico. Failure to appear at that time will preclude you from contesting this Application at a later date.

Very truly yours,

BRIGHT & COMPANY

Denver, CO 80202

Gentlemen:

Enclosed is a copy of an Application to drill a second well in a Horizontal Directional Drilling Pilot Project Located in the W1/2 of Section 35 - 21 North - 2 West, Sandoval County, New Mexico, filed with the New Mexico Oil Conservation Division on behalf of Bright & Company. Records indicate you are an offset operator or lessee. This matter will be heard by the Division on Thursday, August 12, 1993, at 8:15 a.m. at 310 Old Santa Fe Trail, Santa Fe, New Mexico. Failure to appear at that time will preclude you from contesting this Application at a later date.

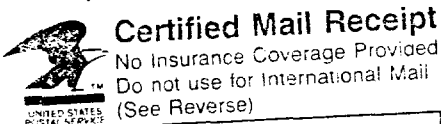

Very truly yours,

BRIGHT & COMPANY
