Re: Sackett Waterflood Project

Dear Mr. Catanach:

Please find attached the data you requested at our waterflood hearing on April 4, 1990. Initially, the zone we plan to inject into is at 2527' - 2568'. We will set a retrievable bridge plug below our injection zone and set an injection packer at 2480'. If we get good response from this zone, additional pay will be perforated in the Penrose and San Andres. We will achieve vertical conformance in both the Sackett #1 and Sackett #2 through recompletions in both wells. At some point in time, we will begin to water out our producer. We then plan to open any additional porosity stringers up the hole.

I am staging this project over time based on economics and probability of successful completions. This is a fairly marginal project and I need to keep my costs low. This is why I am going to tie into Marbob's system so I don't have to buy additional facilities.

If I can be of any assistance, please do not hesitate to call me at (505) 622-2202.

Sincerely,

SIETE OIL AND GAS CORPORATION
