Penrose #1 Tiffin
Quay County*

Mr. R. R. Spurrier
Box 871
Santa Fe, New Mexico.

Dear Sir:

Please find enclosed the required number of copies on Form C-102; C-103; and C-105 prepared in connection with abandonment of N. G. Penrose #1 Tiffin (formerly Hoyt Hamill) located in sec-35, township 12 North, range 34 East, Quay County, New Mexico.

This test was drilled to depth of 6128' in Schist. It was taken over by N. G. Penrose at a depth of 5615'.

I have been unable to locate samples from this test above the depth at which Mr. Penrose took the well over. I am, therefore, handicapped in trying to show the tops of formations above this point. I have talked with Mr. Hamill, and also his attorney in Lubbock who kept Mr. Hamill's records, but have not been able to get much from them.

I believe the hole had reached Schist when Mr. Hamill gave it up and the section below that point was predominately Schist. I believe the lower part of section, in particular, was Horneblende Schist.
