

INSPECTION REPORT

July 17, 1952

Sweetman and Aday
Drilling Associates

Re: Cecil D'Spain No. 1
MENW Sec. 12-6N-6E
Torrance County

This well reached a total depth of 400' at 5:30 p.m. today. The hole is being drilled with sixteen inch tools and has stood up very well without surface casing.

The formation at this depth continues to be a white to dark gray, compact, and somewhat vitreous limestone. Drilling is progressing at a rate of from seven to nine feet per day. Now there is approximately 80' of water standing in the hole. This hasn't hindered drilling any.

During the past week, drilling was suspended Tuesday and Wednesday because of rain.
