

AP - 104

2012 AGWMR

04 / 17 / 2013

October 18, 2012 to determine if those wells were downgradient from the margins of the contaminant plumes.

4.2 POTENTIOMETRIC SURFACE AND GRADIENT

Fluid level measurements collected during 2012 are tabulated in Table 1. Elevations of tops of casings were recorded in feet above mean sea level (famsl). Elevations of the potentiometric surface were calculated in famsl. The range of elevations on the potentiometric surface during the first semi-annual monitoring event April 10, 2012 was from 3858.65 famsl (TW-15) to 3857.60 famsl (TW-9). The map of elevations of the potentiometric surface during the first semi-annual monitoring event is in Figure 3. The direction of flow of groundwater was northeast. The calculated magnitude of the gradient was 0.0018 ft./ft.

The range of elevations of the potentiometric surface during the monitoring event on October 18, 2012 was from 3859.09 famsl (TW-15) to 3857.79 famsl (TW-20). The map of elevations of the potentiometric surface on October 18, 2012 is in Figure 4. Elevations of the potentiometric surface in TW-9 and TW-11 were not used in the construction of this map, because depths to water in those wells were inaccurately measured. Figure 4 depicts the direction of flow of groundwater on October 18, which was also to the northeast. The calculated magnitude of the gradient was 0.0015 ft./ft.

Directions of gradient for the potentiometric surface were northeast during 2012, as they have been since 2009. Magnitude of the gradient became slightly shallower—from 0.0018 ft./ft. to 0.0015 ft./ft. on April 10 and October 18, 2012, respectively. Comparison of gauging data from the two monitoring events in October 2011 and October 2012 indicates the potentiometric surface increased in elevation in all wells measured during both monitoring events—TW-10, TW-11, TW-13 and TW-14. The range of increase was from 1.02 ft. to 2.34 ft. The average increase among those wells was 1.54 feet.

4.3 RESULTS OF ANALYSES OF DISSOLVED-PHASE CONTAMINANTS IN GROUNDWATER

Samples of groundwater were collected from wells TW-10, TW-13 and TW-14 during monitoring events conducted on April 10 and October 18, 2012. Samples also were collected from TW-9, TW-20 and RW-3 on October 18, 2012. A cumulative table of all available results of analyses of groundwater samples collected at the Buckeye Vacuum Field Unit Site is in Table 2. Chemicals of concern (COCs) are in columns across the top of the table. Standards established by the NMWQCC are below the names of analytes. Analytical results for the first monitoring event April 10, 2012, are in map form on Figure 5. Analytical results of the second monitoring event, October 18, 2012, are in map form on Figure 6.

Trends of concentrations of chemicals of concern over time are in Appendix A. Copies of signed analytical reports and chains-of-custody are attached in Appendix B. Dissolved chloride and TDS were present in all the samples collected from wells TW-10 and RW-3 during 2012 at concentrations above the NMWQCC standards of 250 mg/L and 1000 mg/L, respectively. Dissolved chloride in TW-10 increased from 302 mg/L to 425 mg/L during 2012. TDS in TW-10 decreased from 1080 mg/L to 1020 mg/L. Dissolved chloride levels in RW-3 increased from 392 mg/L to 1050 mg/L from

10-18-11 to 10-18-12. TDS RW-3 increased from 823 mg/L on 10-18-11 to 2910 mg/L on 10-18-12. Increases in TW-10 and RW-3 were the sharpest of the year. The long-term trends in concentrations of dissolved chloride and TDS in TW-10 and RW-3 continued to increase during 2012. Dissolved chloride in TW-13 decreased from 83.6 mg/L to 79.5 mg/L between April and October 2012. TDS in TW-13 decreased from 796 mg/L to 731 mg/L during the same period. Dissolved chloride in TW-14 increased from 40.2 mg/L to 49.7 mg/l between April and October 2012. TDS in TW-14 decreased from 527 mg/L to 525 mg/L between April and October 2012. Long-term trends of dissolved chloride and TDS in TW-13 and TW-14 decreased slightly during 2012 and remained below the NMWQCC standards. Dissolved chloride and TDS concentrations in TW-9 and TW-20 were below the NMWQCC standards during 2012. Those wells are considered to be downgradient of the portions of the chloride and TDS plumes exceeding the NMWQCC groundwater standards.

5.0 GROUNDWATER REMEDIATION AND PERFORMANCE

Concentrations of dissolved chloride and TDS in RW-3 increased in 2012 and remained above the NMWQCC standards despite intermittent pumping of water from RW-3 for use in the waterflood operation in the Buckeye Vacuum Field Production Unit. The duration and frequency of pumping from RW-3, while effectively removing dissolved chloride and TDS from the contaminant plume, may be insufficient to reduce concentrations below NMWQCC standards in a timely manner. Increasing the volume of groundwater recovered from RW-3 may be necessary to achieve those goals and is currently under consideration.

6.0 SUMMARY OF FINDINGS

Based on activities conducted at the Buckeye Vacuum Field Unit Site in 2012, CRA presents the following summary of findings:

- The first semi-annual groundwater monitoring event was conducted by CRA on April 10, 2012. Measurements of fluid levels were collected from TW-9, TW-10, TW-11, TW-13, TW-14, TW-15 and TW-19. Samples of groundwater were collected from TW-10, TW-13 and TW-14. Figure 3 depicts the direction of flow of groundwater on April 10, 2012 to be northeast. The calculated magnitude of the gradient was 0.0018 ft./ft.
- The second semi-annual monitoring event was conducted on October 18, 2012. Fluid levels were measured in wells TW-9, TW-10, TW-11, TW-13, TW-14, TW-15, TW-19 and TW-20. Samples of groundwater were collected from TW-9, TW-10, TW-13, TW-14, TW-20 and RW-3. Figure 4 depicts the direction of flow of groundwater also to be northeastward. The calculated magnitude of the gradient was 0.0015 ft./ft.
- Elevations of the potentiometric surface rose in all three monitor wells gauged in October 2011 and October 2012. The elevation of the potentiometric surface in those wells rose by an average of 1.54 feet during that period.
- Dissolved chloride and TDS were present at concentrations above the NMWQCC standards of 250 mg/L and 1000 mg/L, respectively, in all the samples collected from wells TW-10 and RW-3 during 2012. The trends in TW-10 and RW-3 continued to increase during 2012. The trends of dissolved chloride and TDS in TW-13 and TW-14 decreased slightly and remained below NMWQCC standards. Dissolved chloride and TDS concentrations in TW-9 and TW-20 were below the NMWQCC standards during 2012. Those wells are considered to be downgradient of the portions of the chloride and TDS plumes that exceed NMWQCC groundwater standards.
- The area impacted by dissolved chloride and TDS in groundwater exceeding the NMWQCC standards has been reduced by pumping groundwater from RW-3, since pumping began in 2001. The area remaining impacted above the groundwater standards, however, has expanded slightly during 2011 and 2012 to include TW-10.

7.0 PLANNED ACTIVITIES

Semi-annual gauging and sampling will be conducted in April and October of 2013. TW-9, TW-10, TW-13, TW-14, TW-20 and RW-3 will be included in the semi-annual monitoring plan. TW-9 and T-20 will be monitored until TW-10 again demonstrates downgradient delineation of the contaminant plumes. Monitoring will include measurements of fluid levels and collection of samples of groundwater. Dissolved chloride and TDS in all these wells will be analyzed according to analytical methods EPA300.0 and SM2540C, respectively.

Withdrawal of groundwater from RW-3 will continue for use in the water flood system of the Chevron Buckeye Vacuum Field Production Unit. Pump testing will be conducted in RW-3 to determine the extent to which groundwater removal can be increased to further reduce concentrations of dissolved chloride and TDS in RW-3 and the surrounding area.

Results of the two semi-annual groundwater monitoring events at the Buckeye Vacuum Field Unit Site during 2013 will be summarized in an annual report for submission to the NMOCD. The report will include tabulated data from gauging activities, tabulated results of chemical analyses, maps of groundwater gradients, maps of concentrations of chemicals of concern for each monitoring event and recommendations to expedite the site toward closure. Activities conducted to determine the potential to increase the volume of groundwater pumped from RW-3 also will be reported.

All of which is Respectfully Submitted,

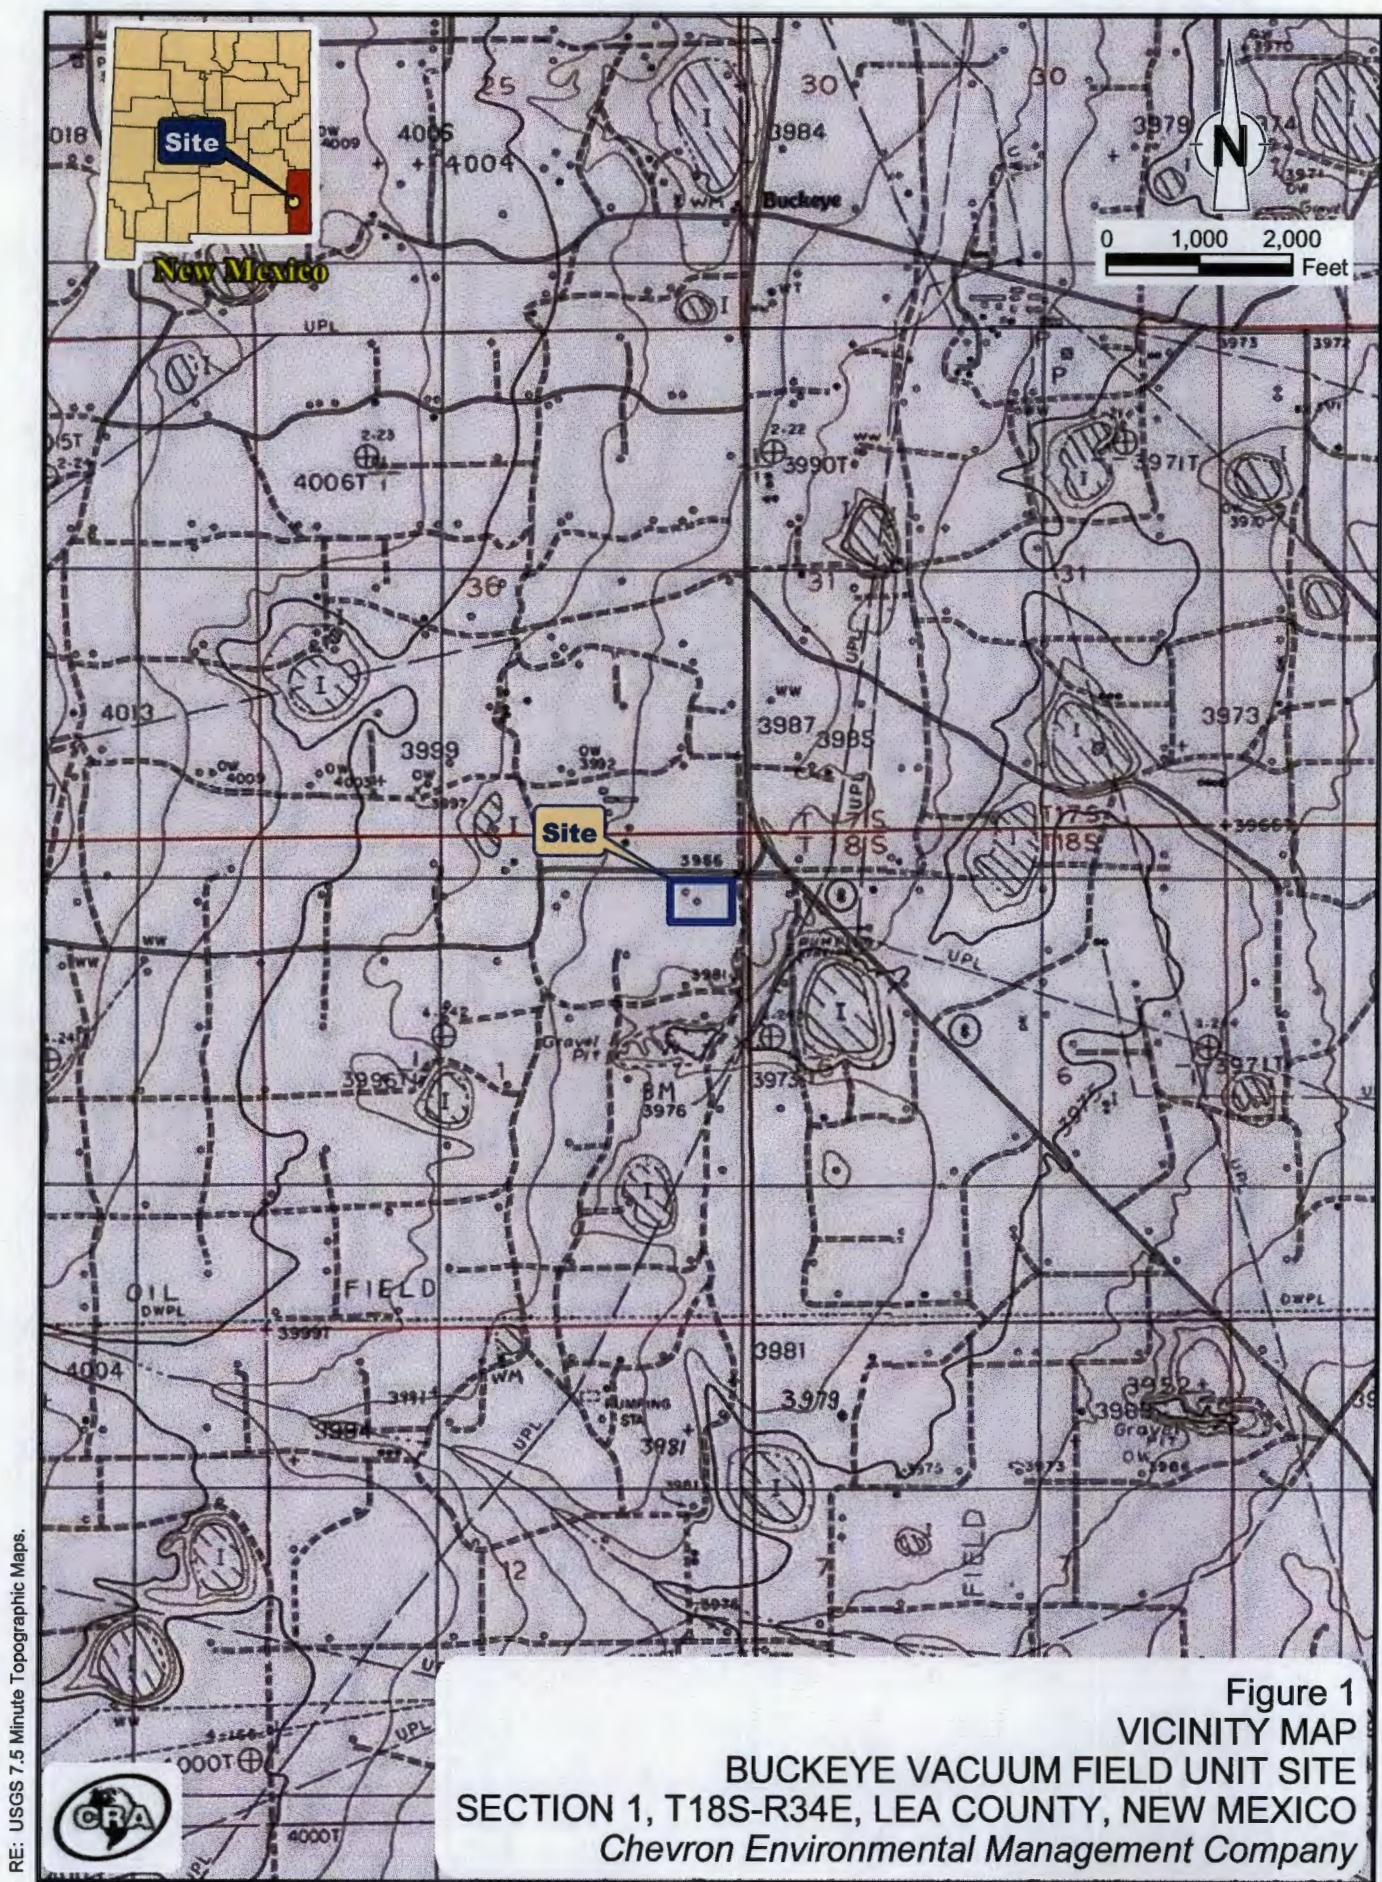

CONESTOGA-ROVERS & ASSOCIATES, INC.

Project Address: Buckeye, New Mexico

Claudia Ramos:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 440574. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 440574 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron II

Odessa Laboratory Manager

Final 1.000

Page 5 of 11

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Prelogin / Nonconformance Report - Sample Log-In

Client: C.R.A.
Date/Time: 4/12/12 12:10
Lab ID #: 440574
Initials: AE

Sample Receipt Checklist

1. Samples on ice?	Blue	Water	No							
2. Shipping container in good condition?	Yes	No	None							
3. Custody seals intact on shipping container (cooler) and bottles?	Yes	No	N/A							
4. Chain of Custody present?	Yes	No								
5. Sample instructions complete on chain of custody?	Yes	No								
6. Any missing / extra samples?	Yes	No								
7. Chain of custody signed when relinquished / received?	Yes	No								
8. Chain of custody agrees with sample label(s)?	Yes	No								
9. Container labels legible and intact?	Yes	No								
10. Sample matrix / properties agree with chain of custody?	Yes	No								
11. Samples in proper container / bottle?	Yes	No								
12. Samples properly preserved?	Yes	No	N/A							
13. Sample container intact?	Yes	No								
14. Sufficient sample amount for indicated test(s)?	Yes	No								
15. All samples received within sufficient hold time?	Yes	No								
16. Subcontract of sample(s)?	Yes	No	N/A							
17. VOC sample have zero head space?	Yes	No	N/A							
18. Cooler 1 No. lbs	12.5	°C	Cooler 2 No. lbs	°C	Cooler 3 No. lbs	°C	Cooler 4 No. lbs	°C	Cooler 5 No. lbs	°C

Nonconformance Documentation

Contact: _____ Contacted by: _____ Date/Time: _____

Regarding: _____

Corrective Action Taken: _____

Check all that apply: Cooling process has begun shortly after sampling event and out of temperature condition acceptable by NELAC 5.5.8.3.1.a.1.

- Initial and Backup Temperature confirm out of temperature conditions
 Client understands and would like to proceed with analysis

John Schnable:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 451047. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 451047 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Nicholas Straccione

Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.

JN A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

* Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

DL Method Detection Limit

NC Non-Calculable

+ NELAC certification not offered for this compound.

* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

Project Name: Midland Odessa Discounted Fee Schedule

Work Order #: 451047

Analyst: TTE

Lab Batch ID: 8992287

Sample: 628923-1-BKS

Date Prepared: 10/20/2012

Batch #: 1

Matrix: Water

Units: mg/L

Sample: 899482-1-BKS

Date Prepared: 10/23/2012

Batch #: 1

Matrix: Water

Inorganic Anions by EPA 300/300.1

Analytes	Blank Sample Result [A]	Spike Added [B]	Blank Spike Result [C]	Blank Spike %R [D]	Spike Added [E]	Blank Spike Duplicate Result [F]	Blk. Spk Dup. %R [G]	RPD %	Control Limits %R	Control Limits %RPD	Flag
Chloride	<0.500	50.0	49.6	99	50.0	49.8	100	0	80-120	20	

Analyst: KUG

Sample: 899482-1-BKS

Date Prepared: 10/23/2012

Batch #: 1

Matrix: Water

TDS by SM2540C

Analytes	Blank Sample Result [A]	Spike Added [B]	Blank Spike Result [C]	Blank Spike %R [D]	Spike Added [E]	Blank Spike Duplicate Result [F]	Blk. Spk Dup. %R [G]	RPD %	Control Limits %R	Control Limits %RPD	Flag
Total dissolved solids	<5.00	1000	1000	100	1000	999	100	0	80-120	30	

Relative Percent Difference RPD = $200 * |(C-F) / (C+F)|$

Blank Spike Recovery [D] = $100 * (C) / (B)$

Blank Spike Duplicate Recovery [G] = $100 * (F) / (E)$

All results are based on MDL and Validated for QC Purposes

Client: Conestoga Rovers & Associates

Acceptable Temperature Range: 0 - 6 degC

Date/ Time Received: 10/19/2012 10:31:00 AM

Air and Metal samples Acceptable Range: Ambient

Work Order #: 451047

Temperature Measuring device used :

	Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?		4.5
#2 *Shipping container in good condition?		Yes
#3 *Samples received on ice?		Yes
#4 *Custody Seals intact on shipping container/ cooler?		Yes
#5 Custody Seals intact on sample bottles?		Yes
#6 *Custody Seals Signed and dated?		Yes
#7 *Chain of Custody present?		Yes
#8 Sample instructions complete on Chain of Custody?		Yes
#9 Any missing/extra samples?		No
#10 Chain of Custody signed when relinquished/ received?		Yes
#11 Chain of Custody agrees with sample label(s)?		Yes
#12 Container label(s) legible and intact?		Yes
#13 Sample matrix/ properties agree with Chain of Custody?		Yes
#14 Samples in proper container/ bottle?		Yes
#15 Samples properly preserved?		Yes
#16 Sample container(s) intact?		Yes
#17 Sufficient sample amount for indicated test(s)?		Yes
#18 All samples received within hold time?		Yes
#19 Subcontract of sample(s)?		Yes
#20 VOC samples have zero headspace (less than 1/4 inch bubble)?		Yes
#21 <2 for all samples preserved with HNO3,HCL, H2SO4?		Yes
#22 >10 for all samples preserved with NaAsO2+NaOH, ZnAc+NaOH?		Yes

* Must be completed for after-hours delivery of samples prior to placing in the refrigerator
