INTRODUCTION

On behalf of Plains Marketing, L.P., (Plains), NOVA Safety and Environmental (NOVA) is pleased to submit this 2013 Annual Monitoring Report in compliance with the New Mexico Oil Conservation Division (NMOCD) letter of May 1998, requiring submittal of an Annual Monitoring Report by April 1 of each year. Beginning on May 29, 2004, project management responsibilities were assumed by NOVA. The Monument 10 Site (the site), formally the responsibility of Enron Oil Trading and Transportation (EOTT), is now the responsibility of Plains. This report is intended to be viewed as a complete document with figures, attachments, tables and text. The report presents the results of the quarterly groundwater monitoring events conducted in calendar year 2013 only. For reference, the Site Location Map is provided as Figure 1. Cumulative tables and laboratory data are provided on the enclosed data disk.

Groundwater monitoring was conducted each quarter of 2013 to assess the levels and extent of dissolved phase constituents and Phase Separated Hydrocarbon (PSH). The groundwater monitoring events consisted of measuring static water levels in the monitor wells, checking for the presence of PSH and purging and sampling of each well exhibiting sufficient recharge. Monitor wells containing a thickness of PSH greater than 0.01 foot were not sampled.

SITE DESCRIPTION AND BACKGROUND INFORMATION

The legal description of the site location is SE ¼ NE ¼ Section 30, Township 19 South, Range 37 East. No information with respect to the release date, volume of crude oil released or recovered, excavation volumes, or pipeline repair details is available. The Release Notification and Corrective Action (Form C-141) is provided as Appendix A. The initial site investigation, consisting of the installation of seven groundwater monitor wells (MW-1 through MW-7), was performed by a previous consultant.

Seven groundwater monitor wells (MW-1 through MW-7) are currently on-site. An automated recovery system recovers PSH from monitor wells MW-2 and MW-3.

FIELD ACTIVITIES

Product Recovery Efforts

During the reporting period, monitor wells MW-2 and MW-3 exhibited measurable thicknesses of PSH during the four quarters of the reporting period. The average PSH thickness for the year from the two (2) monitor wells displaying PSH was 0.74 feet. The maximum measured PSH thickness of 2.89 feet was observed in monitor well MW-2 on December 10, 2013.

Approximately 113.54 gallons (approximately 2.7 barrels) of PSH were recovered from the site during the reporting period. Approximately 2,336.54 gallons (approximately 55.7 barrels) of PSH have been recovered from this site since the project inception. To maximize product recovery efforts, Plains installed a solar recovery system during the 4th quarter of 2011 which utilizes two total fluid pumps powered by two 12 volt solar panels and a 12 volt wind turbine installed in monitor wells MW-2 and MW-3. The pumps operate on a cycle of approximately 3 minutes every 3 hours at an average pumping rate of approximately 2 gallons per minute.

Recovered PSH is reintroduced into the Plains transportation system at the Plains Lea Station Facility, near Monument, New Mexico. Measurable thicknesses of PSH are recorded in Table 1 and Figures 3A-3D.

Groundwater Monitoring

Quarterly monitoring events for the reporting period were performed according to the following sampling schedule, which was approved by the NMOCD in correspondence dated April 28, 2004 and amended by NMOCD correspondences dated June 22, 2005, January 26, 2006, and October 31, 2012.

| NMOCD Approved Sampling Schedule | |
|----------------------------------|---------------|
| MW-1 | Quarterly |
| MW-2 | Quarterly |
| MW-3 | Quarterly |
| MW-4 | Annually |
| MW-5 | Annually |
| MW-6 | Semi-Annually |
| MW-7 | Semi-Annually |

The site monitor wells were gauged and sampled on February 5, May 9, August 1, and November 7, 2013. During each sampling event, monitor wells were purged of a minimum of three well volumes of water or until the wells failed to produce water. Purging was performed using a disposable polyethylene bailer for each well or electrical Proactive Mini-Monsoon pump and dedicated tubing. Groundwater was allowed to recharge and samples were collected using disposable Teflon samplers. Water samples were placed in clean glass containers provided by the laboratory and placed on ice in the field. Purge water was collected in a polystyrene tank and disposed of at a licensed disposal facility.

Locations of the monitor wells and the inferred groundwater gradient, which were constructed from measurements collected during quarterly sampling events performed in 2013, are depicted on the Inferred Groundwater Gradient Map(s), Figures 2A-2D. Groundwater elevation data for 2013 is provided as Table 1. Historic groundwater elevation data beginning at project inception is provided on the enclosed data disk.

The most recent Groundwater Gradient Map, Figure 2D, indicates a general gradient of 0.012 feet/foot to the southeast. This is consistent with data presented on Figures 2A through 2C from earlier in the year. The corrected groundwater elevations ranged between 3,605.03 and 3,609.58 feet above mean sea level, in monitor well MW-6 on May 9, 2013 and monitor well MW-4 on August 1, 2013, respectively.

LABORATORY RESULTS

Monitor wells MW-2 and MW-3 contained PSH during the four quarters of the reporting period and were not sampled.

Groundwater samples obtained during the quarterly sampling events of 2013 were delivered to Trace Analysis, Inc. in Midland, Texas for determination of Benzene, Toluene, Ethylbenzene and Xylene (BTEX) constituent concentrations by EPA Method 8021B. Polynuclear Aromatic Hydrocarbons (PAH) analysis on monitor wells MW-2 and MW-3 was scheduled during the year

2013, but was suspended due to the presence of PSH. Based upon historic PAH analytical data, only those wells exhibiting elevated constituent concentrations above WQCC standards will be sampled, with the exclusion of those wells containing measurable PSH thicknesses. No other wells warrant PAH analysis based upon NMOCD directive. A listing of BTEX constituent concentrations for 2013 is summarized in Table 2. Copies of the laboratory reports generated for 2013 are provided on the enclosed data disk. The quarterly groundwater sample results for BTEX constituent concentrations are depicted on Figures 3A through 3D.

Monitor well MW-1 is sampled on a quarterly schedule and analytical results indicate BTEX constituent concentrations ranged from below the laboratory method detection limit (MDL) for the 1st, 2nd, and 3rd quarters to 0.0031 mg/L during the 4th quarter of the reporting period. Benzene concentrations were below the NMOCD guidelines during the reporting period. Toluene and Ethyl-benzene concentrations were below the laboratory MDL and NMOCD guidelines during the reporting period. Xylene concentrations ranged from below the MDL during the 1st, 2nd, and 4th quarters to 0.0039 mg/L for the 3rd quarter of the reporting period. Xylene concentrations were below the NMOCD guidelines during the reporting period. PAH analysis was not conducted during the 4th quarter sampling event.

Monitor well MW-2 is monitored on a quarterly schedule. Monitor well MW-2 was not sampled during the four quarters of the reporting period, due to the presence of PSH. PSH thicknesses of 0.57 feet, 0.22 feet, 0.76 feet, and 0.26 feet were reported during the 1st, 2nd, 3rd and 4th quarters of 2013, respectively. PAH analysis was not conducted during the 4th quarter sampling event due to the presence of PSH.

Monitor well MW-3 is monitored on a quarterly schedule. Monitor well MW-3 was not sampled during the four quarters of the reporting period, due to the presence of PSH. PSH thicknesses of 2.86 feet, 0.26 feet, 1.63 feet, and 0.08 feet were reported during the 1st, 2nd, 3rd and 4th quarters of 2013, respectively. PAH analysis was not conducted during the 4th quarter sampling event due to the presence of PSH.

Monitor well MW-4 is sampled on an annual schedule and analytical results indicate BTEX constituent concentrations were below MDL and NMOCD regulatory guidelines for each BTEX constituent during the 4th quarter sampling event. Monitor well MW-4 has exhibited 32 consecutive monitoring events below NMOCD regulatory guidelines. PAH analysis was not conducted during the 4th quarter sampling event.

Monitor well MW-5 is sampled on an annual schedule and analytical results indicate BTEX constituent concentrations were below MDL and NMOCD regulatory guidelines for each BTEX constituent during the 4th quarter sampling event. Monitor well MW-5 has exhibited 35 consecutive monitoring events below NMOCD regulatory guidelines. PAH analysis was not conducted during the 4th quarter sampling event.

Monitor well MW-6 is sampled on a semi-annual schedule and analytical results indicate BTEX constituent concentrations were below MDL and NMOCD regulatory guidelines for each BTEX constituent during the 2nd and 4th quarter sampling events. Monitor well MW-6 has exhibited 36 consecutive monitoring events below NMOCD regulatory guidelines. PAH analysis was not conducted during the 4th quarter sampling event.

Monitor well MW-7 is sampled on a semi-annual schedule and analytical results indicate BTEX constituent concentrations were below MDL and NMOCD regulatory guidelines for each BTEX constituent during the 2nd and 4th quarter sampling events. Monitor well MW-7 has exhibited 41 consecutive monitoring events below NMOCD regulatory guidelines. PAH analysis was not conducted during the 4th quarter sampling event.

Laboratory analytical results were compared to NMOCD regulatory guidelines based on the New Mexico groundwater guidelines found in section 20.6.2.3103 of the New Mexico Administrative Code.

SUMMARY

This report presents the results of monitoring activities for the 2013 annual monitoring period. Currently, there are seven groundwater monitor wells on the site. Two (2) monitor wells (MW-2 and MW-3) exhibited measurable thicknesses of PSH during each of the four sampling events of the reporting period and were not sampled. An automated recovery system recovers PSH from monitor wells MW-2 and MW-3. The most recent Groundwater Gradient Map, Figure 2D, indicates a general gradient of 0.012 feet/foot to the southeast.

Approximately 113.54 gallons (approximately 2.7 barrels) of PSH were recovered from the site during the reporting period. Approximately 2,336.5 gallons (approximately 55.7 barrels) of PSH have been recovered from this site since the project inception.

Review of the laboratory analytical results of the groundwater samples obtained during the reporting period indicated BTEX constituent concentrations remain below applicable NMOCD regulatory guidelines in five (5) of the seven (7) site monitor wells. PSH impact is limited to the vicinity of monitor wells MW-2 and MW-3.

ANTICIPATED ACTIONS

Quarterly monitoring, automated PSH recovery, and groundwater sampling will continue in 2014. Manual product recovery and gauging well be conducted on a weekly schedule and will be adjusted according to site conditions. Additional MDPE events will be scheduled as necessary.

An Annual Monitoring Report will be submitted to the NMOCD before April 1, 2015.

LIMITATIONS

NOVA has prepared this Annual Monitoring Report to the best of its ability. No other warranty, expressed or implied, is made or intended.

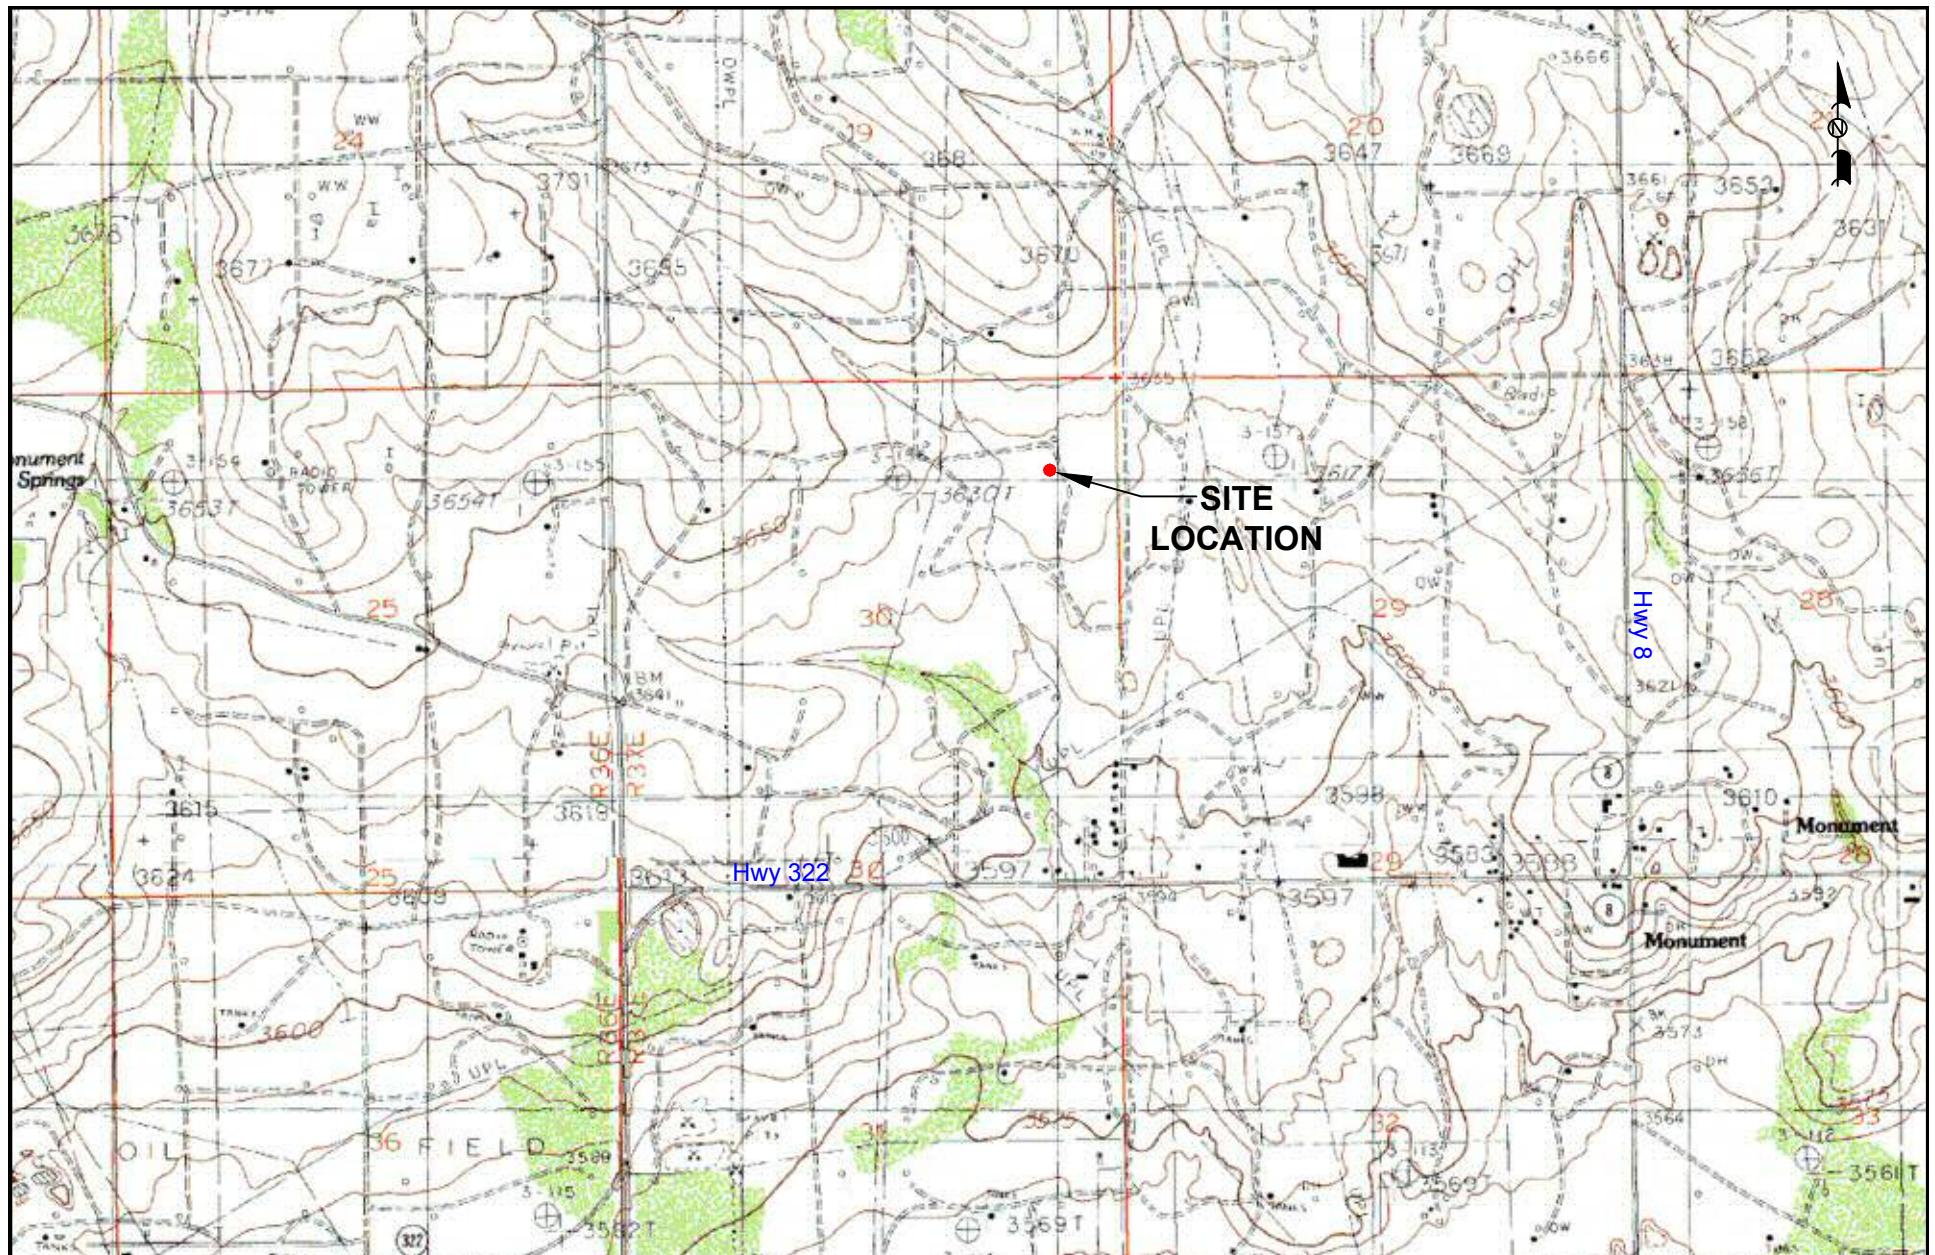

NOVA has examined and relied upon documents referenced in the report and has relied on oral statements made by certain individuals. NOVA has not conducted an independent examination of the facts contained in referenced materials and statements. We have presumed the genuineness of the documents and that the information provided in documents or statements is true and accurate. NOVA has prepared this report, in a professional manner, using the degree of skill and care exercised by similar environmental consultants. NOVA also notes that the facts

and conditions referenced in this report may change over time and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

This report has been prepared for the benefit of Plains. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of NOVA and/or Plains.

| Was Immediate Notice Given? Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required | If YES, To Whom? | |
| By Whom? | Date and Hour | |
| Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No | If YES, Volume Impacting the Watercourse. | |
| If a Watercourse was Impacted, Describe Fully.* | | |

Describe Cause of Problem and Remedial Action Taken.*

Describe Area Affected and Cleanup Action Taken.*

NOTE: Texas-New Mexico Pipeline was the owner/operator of the pipeline system at the time of the release, initial response information is unavailable.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

| Sample | Description | Matrix | Date Taken | Time Taken | Date Received |
|--------|-------------|--------|------------|------------|---------------|
| 320345 | MW-1 | water | 2013-02-05 | 13:02 | 2013-02-06 |

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 10 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Case Narrative

Samples for project Monument #10 were received by TraceAnalysis, Inc. on 2013-02-06 and assigned to work order 13020603. Samples for work order 13020603 were received intact without headspace and at a temperature of 4.8 C.

Samples were analyzed for the following tests using their respective methods.

| Test | Method | Prep Batch | Prep Date | QC Batch | Analysis Date |
|------|---------|------------|---------------------|----------|---------------------|
| BTEX | S 8021B | 83768 | 2013-02-11 at 12:00 | 98865 | 2013-02-11 at 12:00 |

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13020603 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Report Date: May 16, 2013

Work Order: 13051005

Project Location: Monument NM
Project Name: Monument #10
Project Number: NM-2007
SRS #: TNM Monument 10

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

| Sample | Description | Matrix | Date Taken | Time Taken | Date Received |
|--------|-------------|--------|------------|------------|---------------|
| 328898 | MW-6 | water | 2013-05-09 | 12:40 | 2013-05-10 |
| 328899 | MW-7 | water | 2013-05-09 | 12:36 | 2013-05-10 |
| 328900 | MW-1 | water | 2013-05-09 | 12:20 | 2013-05-10 |

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 11 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Case Narrative

Samples for project Monument #10 were received by TraceAnalysis, Inc. on 2013-05-10 and assigned to work order 13051005. Samples for work order 13051005 were received intact without headspace and at a temperature of 3.1 C.

Samples were analyzed for the following tests using their respective methods.

| Test | Method | Prep Batch | Prep Date | QC Batch | Analysis Date |
|------|---------|------------|---------------------|----------|---------------------|
| BTEX | S 8021B | 85958 | 2013-05-15 at 11:00 | 101437 | 2013-05-15 at 11:00 |

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13051005 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

| Sample | Description | Matrix | Date Taken | Time Taken | Date Received |
|--------|-------------|--------|------------|------------|---------------|
| 337353 | MW-1 | water | 2013-08-01 | 13:24 | 2013-08-02 |

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 10 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Case Narrative

Samples for project Monument #10 were received by TraceAnalysis, Inc. on 2013-08-02 and assigned to work order 13080204. Samples for work order 13080204 were received intact without headspace and at a temperature of 4.3 C.

Samples were analyzed for the following tests using their respective methods.

| Test | Method | Prep Batch | Prep Date | QC Batch | Analysis Date |
|------|---------|------------|---------------------|----------|---------------------|
| BTEX | S 8021B | 87952 | 2013-08-07 at 16:30 | 103804 | 2013-08-08 at 09:39 |

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13080204 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Report Date: November 12, 2013

Work Order: 13110802

Project Location: Monument NM
Project Name: Monument #10
Project Number: NM-2007
SRS #: TNM Monument 10

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

| Sample | Description | Matrix | Date Taken | Time Taken | Date Received |
|--------|-------------|--------|------------|------------|---------------|
| 346059 | MW-4 | water | 2013-11-07 | 13:55 | 2013-11-08 |
| 346060 | MW-5 | water | 2013-11-07 | 14:15 | 2013-11-08 |
| 346061 | MW-6 | water | 2013-11-07 | 14:24 | 2013-11-08 |
| 346062 | MW-7 | water | 2013-11-07 | 14:40 | 2013-11-08 |
| 346063 | MW-1 | water | 2013-11-07 | 14:53 | 2013-11-08 |

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 13 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Case Narrative

Samples for project Monument #10 were received by TraceAnalysis, Inc. on 2013-11-08 and assigned to work order 13110802. Samples for work order 13110802 were received intact without headspace and at a temperature of 3.8 C.

Samples were analyzed for the following tests using their respective methods.

| Test | Method | Prep Batch | Prep Date | QC Batch | Analysis Date |
|------|---------|------------|---------------------|----------|---------------------|
| BTEX | S 8021B | 90343 | 2013-11-11 at 08:56 | 106702 | 2013-11-11 at 10:00 |

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 13110802 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Standard Flags

| F | Description |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| B | Analyte detected in the corresponding method blank above the method detection limit |
| H | Analyzed out of hold time |
| J | Estimated concentration |
| Jb | The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL. |
| Je | Estimated concentration exceeding calibration range. |
| MI1 | Split peak or shoulder peak |
| MI2 | Instrument software did not integrate |
| MI3 | Instrument software misidentified the peak |
| MI4 | Instrument software integrated improperly |
| MI5 | Baseline correction |
| Qc | Calibration check outside of laboratory limits. |
| Qr | RPD outside of laboratory limits |
| Qs | Spike recovery outside of laboratory limits. |
| Qsr | Surrogate recovery outside of laboratory limits. |
| U | The analyte is not detected above the SDL |
