If a Watercourse was Impacted, Describe Fully.*	N/A				

**RECEIVED**

By OCD; Dr. Oberding at 1:10 pm, Mar 18, 2015

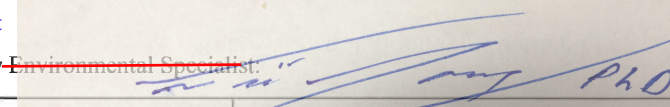

**Describe Cause of Problem and Remedial Action Taken.\***

An offset operator frac'd into our well & caused a small stuffing box leak which led to a release at the battery inside the containment with plastic liner. Location had 1 bbl of oil & 30 bbls of water at well and 10 bbls of oil & 220 bbls of water at the battery inside the containment. Vacuum truck was called in to pick up oil and water. Oil was placed back into the tanks & water was hauled off to a SWD facility. Affected dirt was hauled off.

**Describe Area Affected and Cleanup Action Taken.\***

The caliche pad around the wellhead and the plastic lined containment were the two areas affected. The pool of oil in the containment was picked up with a vacuum truck and put back into the tanks. Water was taken to a SWD facility. Field staff cleaned inside the tank battery and scraped up the dirt that was affected at the wellhead and hauled off.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
