**NATURE OF RELEASE**

Type of Release	Spill	Volume of Release	12 BBLS	Volume Recovered	5 BBLS
Source of Release	2 inch flow line	Date and Hour of Occurrence	10/19/13 9:15 am	Date and Hour of Discovery	SAME
Was Immediate Notice Given?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom?	Geoffrey Leking		
By Whom?	David May	Date and Hour	10/21/13 12:00 pm		
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			
If a Watercourse was Impacted, Describe Fully.*					

**RECEIVED**

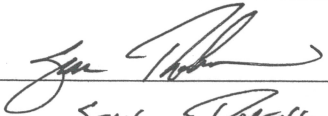

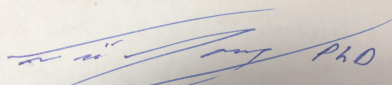

By OCD; Dr. Oberding at 12:44 pm, Apr 06, 2015

Describe Cause of Problem and Remedial Action Taken.\*

Release was caused by pin hole in Flow line due to external corrosion. MOS Shut in well and isolated flow line until repairs could be made.

Describe Area Affected and Cleanup Action Taken.\* The release covered 9,779 square feet of pasture land. RECS personnel were on site beginning on September 4<sup>th</sup>, 2014 to assess the release. Three vertical were installed within the release area at the surface and with depth. Representative samples from the 3 verticals were taken to a commercial laboratory for analysis. Based on the laboratory analysis, a CAP was submitted to NMOCD on September 25<sup>th</sup>, 2014. NMOCD approved the CAP the same day. Corrective Actions began at the site on October 13<sup>th</sup>, 2014. The release was excavated in three portions to 3 ft bgs. All excavated soil, for a total of 1,245 cubic yards, was taken to a NMOCD approved facility for disposal. A total of 1,342 cubic yards of top soil was imported to the site to pad the liners and to serve as backfill. A sample of the imported soil was taken to a commercial laboratory for analysis and returned a chloride value of non-detect. The bottoms of the north excavation and the north excavation (2) were padded with 6 inches of the imported top soil to protect the liners from punctures. 20-mil reinforced poly liners were then installed and properly seated into the base of both excavations. A 5 point bottom composite of the south excavation was taken to a commercial laboratory for analysis. The bottom composite returned a laboratory chloride reading of 192 mg/kg with GRO and DRO readings of non-detect. On October 29<sup>th</sup>, 2014, a request was sent to NMOCD with the excavation data and a request to backfill the site. NMOCD approved the site to be backfilled the same day. All three excavations were backfilled with the imported top soil and contoured to the surrounding location. On November 7<sup>th</sup>, 2014, the disturbed area was seeded with BLM mix #2.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
