If a Watercourse was Impacted, Describe Fully.*					

RECEIVED

By OCD; Dr. Oberding at 8:59 am, Apr 13, 2015

Describe Cause of Problem and Remedial Action Taken.*

MST at the Maljamar MCA lease, a release of produced water occurred. The release originated from a 4" fiberglass water transfer line that was damaged during remediation activities. MSOs immediately isolated line, stopping the release.

Describe Area Affected and Cleanup Action Taken.*

Corrective actions began at the site on September 11th, 2014 for the 1RP-3220 release. During excavation, a 4 inch fiberglass line was hit causing the 1RP-3220 release. A vacuum truck was called to the site to remove the fluid from the excavation. Given that the new release was encompassed in the excavation being conducted for the prior release, once the wet material was removed, the excavation for liner installation continued. When the entire release area was excavated to a depth of 4 ft bgs, a 20-mil reinforced poly liner was installed and properly seated into the base of the excavation. A request to backfill the site was sent to NMOCD and BLM on October 6th, 2014, and both agencies approved the request that same day. Approximately 800 cubic yards of contaminated soil was taken to a NMOCD approved facility for disposal. A total of 860 cubic yards of top soil was imported to the site to serve as backfill. A sample of the imported top soil was taken to a commercial laboratory and returned a chloride result of non-detect. The excavation was backfilled with the imported top soil and contoured to the surrounding location. The disturbed areas in the pasture will be seeded with a blend of native vegetation during the 2015 rainy season that begins in April or May.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
