Describe Cause of Problem and Remedial Action Taken.\*

**By OCD; Dr. Oberding at 10:44 am, Apr 15, 2015**

A valve to the Poseidon tank was left partially open while transferring produced water from one tank to another causing a spill of 51 BPW. 42 bbls spilled into the lined containment and 9 bbls spilled over on to location. A vacuum truck was able to recover all of the 42 BPW in the containment and 5 BPW on the pad, leaving 4 bbls that soaked into the ground on location. No water spilled outside the location pad.

Describe Area Affected and Cleanup Action Taken.\*

The ground area affected was approximately 40' x 60' and on the southeast section of the pad. Alfredos Trucking will take soil samples, haul off the contaminated soil, and lay new caliche.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
