Elements of a State's Program Revision Application

[40 CFR § 145.32](#) lists the core elements of a program revision application.

States may need to submit the following:

- A modified Program Description;
- A revised or new MOA;
- A modified Attorney General's statement;
- A modified MOA between the state and the RA;
- The state's revised UIC statutes and/or regulations; and
- A description of the state's public participation process.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

MEMORANDUM

SUBJECT: Guidance for Review and Approval of State
Underground Injection Control (UIC) Programs and
Revisions to Approved State Programs.
GWPB Guidance #34

FROM: Victor J. Kimm, Director
Office of Drinking Water (WH-550)

TO: Water Division Directors
Regions I - X

PURPOSE

The purpose of this document is to provide guidance to EPA Regional offices on the revised process for the approval of State primacy applications and the process for approving modifications in delegated programs, including aquifer exemptions.

BACKGROUND

On January 9, 1984, the Deputy Administrator announced an Agency policy for a State program approval process placing the responsibility on Regional Administrators to recommend UIC program approval to the Administrator and making Regional Administrators clearly responsible for assuring that good, timely decisions are made. At the same time, we are reaching a point in the UIC program where States are beginning to make revisions to approved programs and we are promulgating amendments to the minimum requirements that the States must adopt within 270 days. We have reviewed the existing approval process and this Guidance spells out the adjustments necessary to comply with the Agency's policy. This new process will take effect on July 5, 1984, and applies to approval of primacy applications and substantial program revisions, which are both rulemaking and cannot be delegated by the Administrator under the Safe Drinking Water Act. This guidance also addresses review and approval of non-substantial program revisions which are the responsibility of the Regional Administrator.

I. REVIEW AND APPROVAL OF APPLICATIONS

REGIONAL ROLE

The effect of the new Agency policy is to give Regions greater responsibility for managing the delegation of EPA programs. The FY 1984 Office of Water Guidance suggests that Regions develop State-by-State delegation strategies, although formal schedules for submittal and approval of State applications are not required after FY 1984. Regions are to work with States to develop approvable applications. They are to solicit and resolve Headquarters comments, "keep the clock on the formal review period, recommend approval to the Administrator, and are responsible for timely approvals. In this process, the Regions speak for the Agency on approval matters but are advised not to make commitments regarding unresolved major issues raised by Headquarters offices.

Draft applications

The Regions are responsible for working with the States and getting them to submit draft applications so that problems can be identified and resolved in the early stages. The draft applications should be submitted as early as possible to Headquarters for comments, and Headquarters comments discussed with the States. (Guidelines on resolving recurring problems in State applications are included as Attachment 1.)

Final applications

Upon receipt of a final application the Regions will:

1. determine whether the application is complete, and if it is:
2. send copies of the final application to Headquarters for review, accompanied by a staff memorandum explaining how issues raised on the draft application have been resolved; (This should be done as early as possible so that Headquarters comments can be received before the public hearing.)
3. take care of the public participation process including: selecting a date for the public hearing, making the necessary arrangements for holding the hearing and publishing notice in the Federal Register;
4. work with the State to resolve all remaining issues identified either during the public participation process or by Headquarters;
5. when all issues have been resolved, prepare and transmit to Headquarters an Action Memorandum signed by the Regional Administrator recommending approval, explaining the major issues and their resolution, a Federal Register notice of the Administrator's

decision, and a staff memorandum explaining how all issues have been resolved.

HEADQUARTERS ROLE

The policy specifies that program Assistant Administrators, the General Counsel, and the Assistant Administrator for Enforcement and Compliance Monitoring have the authority to raise issues which must be resolved prior to the approval of the State program. The policy also states that the process should include time limits for completion of reviews by all offices, that new issues should not be raised or old issues reopened unless there are material changes in the application, and that there should be some distinction between major objections which must be resolved before program approval and comments of a more advisory nature. We believe that for the sake of expeditious and consistent reviews, ODW should retain the role of coordinating Headquarters comments.

Draft applications, Final applications.

These and any other material for review by Headquarters should be sent to the Director, State Programs Division (SPD). The SPD will coordinate the review process with Office of General Counsel, Office of Enforcement and Compliance Monitoring and internally within the Office of Water. The Regions will be advised of the issues raised by the Review Team by a conference call between the Review Team and Regional staff. Written comments distinguishing major issues and advisory comments (if necessary) will be sent within 15 working days unless there is voluminous material to be xeroxed, in which case the review period will be extended to 20 working days. (The Region will be notified if such extension is necessary.) Written comments will be signed by the Director, State Programs Division.

Action memorandum and Federal Register Notice of Approval

These should be sent to SPD which will be responsible for obtaining the proper concurrences from all AAs involved and sending the package to AX for signature. The staff memorandum explaining resolution of all issues will be reviewed at the Review Team level within 5 working days. Assuming that all issues have been taken care of the process for obtaining all necessary signatures will take between 30 and 45 days.

II. PROGRAM REVISIONS

INTRODUCTION

Following EPA approval of a State UIC program, the State will from time to time make program changes which will constitute revisions to the approved program. The UIC regulations address procedures for revision of State programs at 40 CFR §145.32. These regulations direct the State to “keep the Environmental Protection Agency (EPA) fully informed of any proposed modification to its basic statutory or regulatory authority, its forms, procedures, or priorities.” The regulations differentiate between “substantial” revisions which are rulemaking and must be approved by the Administrator and “non-substantial” revisions which can be approved by a letter to the Governor.

To date EPA has encountered the following types of revisions to approved State programs:

- S Aquifer exemptions;
- S Minor changes to the delegation memorandum of agreement;
- S Regulatory and statutory changes which resulted in a more stringent program;
- S Revisions to State forms which were part of the approved program;
- S Transfer of authority from one State agency to another;
- S Alternative mechanical integrity tests.

While providing a basic framework for program revisions, the regulations are not specific in defining “substantial” and “non-substantial” program revisions. These categories are defined below.

Definition of Program Revisions

Revisions to State UIC programs require EPA approval or disapproval actions only if they are within the scope of the Federal UIC program. Aspects of the program which are beyond the scope of the Federal UIC regulations are not considered program revisions under §145.32. For example, if a State modifies permitting requirements for Class V wells, this would not be considered a program revision as long as the modified requirement was at least as stringent as the Federal UIC regulations, since the regulations do not require specific permitting of Class V wells.

"Substantial" versus "Non-substantial" Revisions

The wide range of possible program revisions and varying situations from State to State makes it impossible to establish a firm definition of what constitutes a "substantial" program revision. However, as a general rule, the following types of program revisions will be considered "substantial":

1. Modifications to the State's basic statutory or regulatory authority which may affect the State's authority or ability to administer the program;
2. A transfer of all or part of any program from the approved State agency to any other State agency;
3. Proposed changes which would make the program less stringent than the Federal requirements under the UIC regulations (or the Safe Drinking Water Act, for Section 1425 programs); and
4. Proposed exemptions of an aquifer containing water of less than 3,000 mg/l TDS which is: (a) related to any Class I well; or (b) not related to action on a permit, except in the case of enhanced recovery operations authorized by rule.

Any program revision which requires action by EPA, but which is not considered "substantial", will be a "non-substantial" revision.

REGIONAL ROLE

Substantial Program Revisions

Upon determining that a program revision is substantial, the Regions will:

1. send copies of the proposed revision to SPD;
2. take care of the public participation process;
3. work with the State to resolve problems, if any;
4. prepare an Action Memorandum and a Federal Register notice of Administrator's approval.

Non-substantial Revisions

The authority for approval of non-substantial revisions is delegated to the Regional Administrator. The Regions will forward a copy of the approval letter and of the approved revision to the State Program Division.

Disapproval of Program Revisions

Disapproval of a proposed State program revision may be accomplished by a letter from the Regional Administrator to the State Governor or his designee.

For all aquifer exemptions, the Regions should fill out and send to the SPD and Aquifer Exemption Sheet (Attachment 2). If the exemption constitutes a substantial program revision, or requires ODW concurrence, as much of the supporting material as feasible should be sent along. (Large maps and logs are difficult to reproduce and may be omitted.) Aquifer exemptions that constitute substantial revisions will be handled as described above. Where ODW concurrence is necessary it will be in the nature of a telephone call from the Director, SPD, because of the potential of the short approval time frames. Approval will be confirmed later by a memorandum. Guidance for the review of aquifer exemptions are included as Attachment 3.

Alternative Mechanical Integrity Tests

The authority to approve alternative mechanical integrity tests has been delegated to the Director, Office of Drinking Water. Therefore, such proposals and appropriate supporting documents should be submitted to the State Program Division. The SPD will transmit them to the UIC Technical Committee for review. If the Committee supports approval of the test, the Director of ODW will inform the Regions and approve the test as a “non-substantial” program revision.

III. RESOLUTION OF DIFFERENCES

The major effect of the Agency policy should be to speed up the resolution of issues. The policy states that the senior managers are responsible for assuring that early consultation takes place so that issues can be identified and resolved internally as early as possible. Regional Administrators are responsible for elevating to top managers those issues upon which there is internal disagreement. Differences can arise within Headquarters and between Headquarters and Regions. They will be handled as follows for both program approvals and substantial program modifications.

Within the Headquarters Review Team

If the Headquarters Review Team cannot agree on whether an issue should be raised, the Review Team memorandum will reflect the majority comments. The dissenting office may send a memorandum signed by its Office Director or equivalent to the Water Division Director explaining its issue. If the Region agrees, it will raise the issue with the State. If not, the issue will be resolved using the process outlines below.

Between Headquarters and the Region

1. The first step should be a Regional appeal to the “Bridge Team” (Office Directors). This can be accomplished within 10 working days. The Region should notify SPD by telephone that there is disagreement on a given issue. A Bridge Team meeting will be scheduled within 7 - 10 working days. The Region can attend the meeting, send a memorandum explaining its position, or rely on the SPD to present the Regions position. The decision of the Bridge Team will be communicated to the Region by telephone as soon as it is made, and confirmed, for the record, in a memorandum signed by the ODW Office Director with concurrence from other offices involved.
2. If this fails the Agency’s “Decision-Brokering” process should be invoked. This process is explained in detail in a February 1, 1984, memorandum from Sam Schulhof (Attachment 4)

IV. IMPLEMENTATION

This guidance takes effect on July 1, 1984. We realize that many applications are now in the review process. For the sake of simplicity and clarity this process will only apply to those pending applications for which a public hearing has not been held or announced by that date.

Attachments

Guidelines for Resolving Recurrent Problems in UIC Applications
Aquifer Exemption Summary Sheet
Guidelines for Reviewing Aquifer Exemption Requests
Sam Schulhof Memorandum of February 1, 1984

PROCESS

Day 1-10 Receive Primacy Application from the State.

Determine whether the submission is complete.

To determine whether a State submission is complete one must determine whether all the elements of submission are included, properly signed, as stringent as the Federal requirements, etc.. In turn, these submitted elements must be looked at individually and determined to cover all points of an acceptable program. For example, the Attorney General’s Statement must contain the necessary documentation that the State has the authority to issue permits and set conditions on those permits. As another example, the program

description must include schedules for issuing permits to all injection wells which are required to have permits, and to establish an inventory of Class V wells. Refer to individual guidances for more detailed information. See paragraph one (1) under State Submission for elements of a program submission.

Begin to make arrangements in the Region for tentative hearing date, location of submission for public inspection, press releases, preparations for public hearing, stenographic services, public comment and public hearing procedures, etc.

NOTE: Under Sec. 1425 guidance, the EPA is required to determine within 10 days whether the State's submission is complete.

Day 10 Send Notice to Federal Register indicating the State's submission is complete.

Send copy(s) of the complete State's submission to EPA Headquarters.

Notify the State that the submission is complete.

NOTE: EPA is given 30 days to review the State's submission to determine its completeness, and to notify the State of its decision. However, the EPA should attempt to determine if the submission is indeed complete in all respects as soon as possible to start the required times for public comment and public notice for hearings.

NOTE: Under Sec. 1425 guidance: if an application has been found to be incomplete and the State insists that EPA proceed with first review of the application as submitted, the review period will begin on the date that EPA receives the State's request to proceed in writing.

Federal Register notices to be published and all copies of the State's submission to be submitted to EPA Headquarters should be addressed to:

Mr. Phil Tate¹
U.S., Environmental Protection Agency
Office of Drinking Water
State Programs Division (WH-550)
401 M Street, SW
Washington, DC 20460
(202) 426-8290

¹As of April 2000, the contact is:
Mario Salazar//Office of Ground Water and Drinking Water (4606)//401 M. Street, SW//Washington, DC 20460
Phone: 202 260-2363, fax: 202 401-2345, email: salazar.mario@epa.gov

(Express mail service is recommended)

It is recommended that the Regional Office set up a review team to review the State's submission, and to appoint the Water Supply Branch the lead in establishing the procedures for the review process. The application review team should include representatives from the offices of the Regional Counsel, Solid Waste, Enforcement, and other divisions which have direct responsibility in the UIC regulatory program. The following list is an example of this structure. Headquarters has been set up to review applications as shown below.

REGION: Water Supply Branch (WSB)
 Solid Waste Branch
 Enforcement Branch
 Regional Counsel
 Permits Branch

HEADQUARTERS: Ground Water Protection Branch (to Phil Tate for distribution) ²
 Office of Solid Waste
 Office of General Counsel
 Office of Water Enforcement
 Enforcement Division
 Permits Division

Day 10-50 EPA Regional and Headquarters Review.

It is presumed that discussions will take place between the Regional and Headquarters staffs during this period.

Day 20 Public notice of the complete submission appears in the Federal Register.

The public notice shall be in accordance with EPA review procedures in 40 CFR 123.54(c) and (d). This Notice shall indicate that a public hearing will be held if sufficient interest is expressed, and that a 30-day comment period will be held. All information pertaining to the public hearing, such as date, time and location of the hearing should be included.

Day 20-50 30-Day public comment period.

The WSB should remain . in close contact with the State during this entire time, and all changes that can be made should be discussed and revised during this time.

² Please send revision/primacy packages to the same person in footnote above.

remainder of the review period in time sufficient for the Regional Administrator's determination.

If it is determined that sufficient time does not exist to make the necessary revisions in the State's submission, EPA and the State shall mutually agree on a reasonable extension of the statutory review period.

Day 85 Obtain Concurrence from EPA Headquarters on Final package.

Day 88 Forward State's submission package to Regional Administrator for approval (See Special instructions, pg. 14).

Day 90 Regional Administrator makes his decision on State's application.

NOTE: Regional Administrator must obtain prior concurrence from EPA Headquarters.

Notify the State of the Regional Administrator's decision.

Send notice of determination to Federal Register.

Publish the notice of the rule in accordance with 4UCFR 123.54(a)(1) --- circulated to attract wide attention; i.e* newspapers mailing lists, etc.

If the Regional Administrator decides not to approve the State program or to approve only in part, the notice shall include a concise statement of the reasons for that determination.

Send Responsiveness Summary to those that testified at public hearings and to others on request.

IMPLEMENTATION

The Water Supply Branch (WSB) Chief shall use this guidance in reviewing the State UIC program submission in accordance with established Regional review procedures. The activities listed during the 90 day period do not exhaust all the activities necessary for the Regional Office to accomplish during its review of the State submission. However, this guidance does establish the major milestones that need to be accomplished during this 90-day review period.

EPA Headquarters suggests that the Regional office invite and give adequate notice to Headquarters to attend the meetings with the State concerning the comments from the public comment period, the public hearing, and EPA review (both Regional and Headquarters review). EPA Headquarters should also be notified of matters of discussion between the State and the Region that are of national significance, or in which the results would be of importance to the program as a whole.

If during the meeting with the State it is determined that the statutory review period must be extended, the Regional Office shall by agreement with the State set interim dates, schedules, and reviews of the revised submission. The length of the extensions shall be by mutual agreement between EPA and the State. EPA Headquarters must be notified of all actions concerning extensions of the review period. Extensions are for the purpose of the State needing additional time to make necessary revisions to the submission.

The WSB Chief should also keep EPA Headquarters informed of: the receipt and status of UIC program submissions; the scheduled dates for public hearings; significant meetings between the State and the Region; and other primacy actions. The Regional Administrator shall also comply with all limitations as defined in the delegation of authority for the UIC program.

SPECIAL INSTRUCTIONS

Sec. 1422(b)(2) of the SDWA states that within ninety days after the State's application, the Administrator shall either approve, disapprove, or approve in part and disapprove in part, the State's underground injection control program. The EPA Headquarters intends to delegate this authority to the Regional Administrator (RA) with prior concurrence by EPA Headquarters. Until this delegation becomes effective, program approvals can only be made by the Administrator.

In the interim, all requests for approval shall be processed by the Regional Water Supply Branch in accordance with this guidance, excluding the procedure delineated at Day 85.

Instead, the Regional Water Supply Branch Chief shall forward the necessary briefing documents and transmittal package to the EPA Headquarters for final approval by the EPA Administrator in accordance with normal Regional clearance procedures. ODW will be responsible for obtaining the Administrator's approval.

All documents sent to Headquarters shall be sent to Mr. Phil Tate the person in footnote 1 above for action.

FILING INSTRUCTIONS

This guidance should be filed as Ground Water Program Guidance No. 15: UIC Program Guidance #34.

ACTION RESPONSIBILITY

For further information on this guidance contact:

A. Roger Anzzolin³

³ Use the person in footnote 1 above as contact person after April 2000.

State UIC Program
Approval Process

GUIDELINES FOR RESOLVING RECURRING
PROBLEMS IN UIC APPLICATIONS

Inadequate statutory authority

1. Authority to regulate all underground injection.

The regulations require that a State must have the authority to “prohibit any underground injection except as authorized by permit or by rule” 40 CFR §144.11. Many States have not enacted specific statutes parallel to the Safe Drinking Water Act (SDWA), but rely on the authority provided by statutes enacted to comply with RCRA or CWA. In such statutes the State’s authority is often keyed to disposal of wastes or the regulation of pollution. If the definitions of these terms are not broad enough the State may not have the authority to regulate all classes of wells. The problem can usually be solved by the Attorney General if in his statement of legal authority he can make a colorable argument that the statutes do, in fact, give the State broad authority to regulate “non-waste” injection.

2. Authority to impose minimum requirements as stringent as the federally prescribed minimum requirements.

Even if a State can demonstrate authority over all injections, the enabling statute may not provide the authority to impose certain specific requirements. For example, a statute which simply mandates non-endangerment or protection of the “beneficial uses” of ground water may not provide the authority to impose construction requirements designed to achieve non-migration of fluids as prescribed by 40 CFR §§146.12, .22, and .32. As above, this issue can be solved by the Attorney General if he can assert that the specific technical requirements to be imposed by the State are within the authority established by the State’s statute.

3. Authority on Federal lands and over Federal facilities.

State authority to regulate injection on Federal lands and by Federal agencies and facilities is explicitly required by the Act. Section 1421 (b)(1)(D). Therefore, the State must demonstrate such authority.

Demonstration of authority over Federal agencies can usually be done by assuring that the State’s definition of “person” or “owner or operator” includes officers or agencies of the Federal Government. At the very least, these should not be excluded from the definition, and the Attorney General should assert that the definition is broad enough to cover such entities.

As far as demonstration of authority over Federal lands is concerned, the Attorney General statement should include an explicit finding that the State has the authority to apply its UIC program on Federal lands. Furthermore, because the U.S. Geological Survey regulates some classes of wells on Federal lands, the Program Description should include a section describing the relationship between the State's and the Survey's regulatory activities.

4. Authority over Indian lands.

The UIC regulations assume that implementation on Indian lands is a Federal responsibility unless: 1) the State chooses to assert jurisdiction; and 2) the State demonstrates the necessary legal authority.

Several States which have asserted jurisdiction over Indian lands have relied on the fact that they have regulated non-Indian operators on these lands for years. This does not constitute an acceptable demonstration. There needs to be a discussion in the AG statement explaining the basis for the State's authority. A simple assertion from the Attorney General does not suffice since he is not simply interpreting State law but discussing relationships between State and Federal jurisdictions. The application must include the treaties or Federal statute which grant the State such authority and the text of any opinions in any court case in which the State's authority in this regard was tested.

Inadequate demonstration under 40 CFR §145.21.

Pursuant to 40 CFR §145.21(d), a State need not develop a full regulation for a given class of wells if the State can demonstrate that no wells of the class exist, and that none can legally occur.

The demonstration that no well of a given class exist should be based on a reliable inventory or on geological or hydrological facts, and not be an unsubstantiated assertion.

The determination of whether a class of wells cannot legally occur is a matter of State law, and EPA will rely to a large extent on the interpretation of State law and regulations in determining whether the State has met the standard. Such a demonstration need not be made by any single set of circumstances. In all cases the State must have statutory authority over the class of wells. Where the State has an explicit statutory or regulatory prohibition of the class of well this obviously is an adequate demonstration. Where the State has no regulations the State might make the demonstration by showing that no injection may be authorized without a permit and that under law the State cannot issue permits (even if requested) in the absence of regulations.

Where State does have applicable regulations the state might make the demonstration that no injection may occur without a permit by agreeing with EPA not to issue any permits and by showing that the State has the absolute discretion to make such an agreement. Other types of demonstrations may also be possible if they accurately reflect State law as stated by the Attorney General.

Inadequate definition of the resource to be protected.

1. Definition of underground sources of drinking water.

The Federal regulations define underground sources of drinking water, (USDWs) explicitly at 40 CFR §144.3. A number of statutes that we have reviewed authorize the State agency to protect "waters of the State" or "fresh water". These terms leave a great deal of discretion to the State agency to define the resource to be protected. The discretion should be tied down in the regulations which should use EPA's definition. If this cannot be done then, at the very least, the State should agree in the MOA to interpret its definition as being as broad or broader than EPA's and the Attorney General's statement should certify that it is within the State's authority to do so.

2. Aquifer exemptions

In some States, Class II and III operations may be taking place in aquifers containing less than 10,000 mg/l TDS. These aquifers must be exempted in accordance with 40 CFR §146.04 in order for these operations to remain legal. All information necessary for EPA to approve the exemptions should be included in the application. This includes a demonstration that the aquifer is not currently used and that it meets one of the criteria of §146.04(b). The aquifer must also be identified in terms of areal extent and depth.

3. EPA role in subsequent exemptions.

There must be a clear agreement on the part of the State that exemptions subsequent to approval of the State program will be treated in accordance with 40 CFR §144.7(b)(3). If this is not clear in the State's regulations, the State should address the question in the MOA. EPA will consider some flexibility in the process for approval of these exemptions and the timing of EPA's actions.

Inadequate permitting process.

So far the major problems that we have encountered with regard to permits have been the level of public participation in the permitting process and the possibility of permits issuing by default.

1. Public participation.

Some State statutes limit the definition of interested parties to such entities as adjacent "landowners" or "mineral rights owners". EPA's regulations require that the general public be informed of permit applications and given the right to comment. This problem can usually be solved by the State agreeing in the MOA to taking whatever additional measures are necessary to assure adequate participation by the public.

2. Default permits.

Several States have statutes which require permit applications to be acted upon within a stated period of time. These requirements must be scrutinized with care. If the effect of the requirement is that a permit automatically issues at the default deadline, the State would not be able to demonstrate that no injection that could endanger underground sources of drinking water will be authorized. In this case, there is little recourse but to get the State to amend its statutes. If, however, the deadline simply compels the State to act, but the State can still require all necessary permit conditions, and assure adequate public participation before the permit is issued, the deadline may be acceptable.

The Attorney General Statement should explicitly address the effect of such statutory sections and certify that the State can in all cases impose appropriate permit conditions or deny the permit if such action is warranted.

Inadequate authorization by rule.

If any injection wells are in operation in a State at the time the State's UIC program is approved, these wells become illegal unless permitted or authorized by rule. Since all wells cannot be permitted immediately upon the effective date of the State program the State regulations must contain the language of a rule clearly authorizing the wells to continue operation for a given period of time and spelling out the requirements with which an operator must comply. In some cases however, an existing State permit program already submits owners and operators to the requirements of EPA's authorization by rule. If these permits continue in effect until UIC permits are issued, the State need not authorize wells by rule.

Where applicable the Attorney General statement must certify that the State has the authority to authorize injection by rule and to impose the specific requirements. We have reviewed several programs where the statutes seemed to give the State only the authority to require permits. The Attorney General should then explain how the State can authorize by rule. A possibility is to state that rules are a form of permits.

Inadequate enforcement authority.

The State statutes should provide for the enforcement mechanisms and civil and criminal penalties in at least the amounts specified in 40 CFR §145.12. EPA may make an exception to these requirements for: 1) Class I, II or III wells where banned, 2) Class II wells covered under §1425; and 3) Class V wells. Furthermore, the State's authority should not be limited by the use of qualifiers such as “willfully” or “knowingly” in the language of the statutory provisions. If a State statute is lacking in regard to any of these provisions it is very difficult to resolve the problem without legislative changes. It is sometimes possible to find other environmental statutes that could provide the necessary penalty authority. The Attorney General must certify that these authorities can be applied to violations of the UIC program.

Finally, the State must have the ability to enforce both against violations of the terms of a permit and violations of the statutes and regulations in general. If the statutes do not explicitly provide that ability and the Attorney General cannot provide a satisfactory argument that the State somehow has this ability, legislative changes may be necessary.

Problems with incorporation by reference

EPA supports the concept of State incorporation by reference of the Federal regulations where the Attorney General can assert that it is consistent with State law. However, if the Federal regulations were ever amended it would be difficult for operators in the State to locate a definite body of regulations that constitute the regulations legally effective in the State. The State may consider actually printing out the language of the Federal regulations in the State administrative code.

Attachment 3

GUIDELINES FOR REVIEWING

AQUIFER EXEMPTION REQUESTS

BACKGROUND

The Consolidated Permits Regulations (40 CFR §§146.04 and 144.7) allow EPA, or approved State programs with Environmental Protection Agency (EPA) concurrence, to exempt underground sources of drinking water from protection under certain circumstances. An underground source of drinking water may be exempted if:

1. It does not currently serve as a source of drinking water and;
2. It cannot now and will not in the future serve as a source of drinking water because:
 - (a) It is mineral, hydrocarbon, or geothermal energy producing, or it can be demonstrated by a permit applicant as a part of a permit application for a Class II or III operation to contain minerals or hydrocarbons that considering their quantity and location are expected to be commercially producible;
 - (b) It is situated at a depth or location which makes recovery of water for drinking water purposes economically or technologically impractical;
 - (c) It is so contaminated that it would be economically or technologically impractical to render that water fit for human consumption; or
 - (d) It is located over a Class III well mining area subject to subsidence or catastrophic collapse; or
3. The Total Dissolved Solids content of the ground water is more than 3,000 and less than 10,000 mg/l and it is not reasonably expected to supply a public water system.

Regulations at 40 CFR §144.7(b)(1) state that "The Director may identify (by narrative description, illustrations, maps or other means) and describe in geographic and/or geometric terms (such as vertical and lateral limits and gradient) which are clear and definite all aquifers or parts thereof which the Director proposes to designate as exempted aquifers. . ." If an exemption is proposed under 40 CFR §146.4(b)(1), the applicant for a Class II or III injection well permit must submit information to demonstrate "commercial producibility." To demonstrate producibility the applicant for a Class III injection well permit may provide a map and general description of the mining zone, analysis of the amenability of the mining zone to the proposed mining method, and a production timetable. Applicants for an exemption for a Class II injection well may demonstrate producibility by providing information such as logs, core data, drill stem

test information, a formation description, and oil data for the well in question or surrounding wells.

Except as listed above, the regulations do not specify technical criteria for the EPA to judge aquifer exemption requests. The EPA therefore developed the following technical criteria. These criteria include general information requirements common to all aquifer exemption requests. These are followed by specific criteria to evaluate each type of exemption request listed above.

EPA will approve aquifer exemptions for only specific purposes. All exemption request approvals will include a description of injection activities allowed and a statement that additional approvals would be needed for other injection activities (e.g., hazardous waste disposal into an aquifer exempted for mineral production).

EVALUATION CRITERIA

General

Applicants requesting exemptions must provide the following general information:

1. A topographic map of the proposed exempted area. The map must show the boundaries of the area to be exempted. Any map which precisely delineates the proposed exempted area is acceptable.
2. A written description of the proposed exempted aquifer including:
 - (a) Name of formation of aquifer.
 - (b) Subsurface depth or elevation of zone.
 - (c) Vertical confinement from other underground sources of drinking water.
 - (d) Thickness of proposed exempted aquifer.
 - (e) Area of exemption (e.g., acres, square miles, etc.).
 - (f) A water quality analysis of the horizon to be exempted.

In addition to the above descriptive information concerning the aquifer, all exemption requests must demonstrate that the aquifer “. . . does not currently serve as a source of drinking water.” (40 CFR §146.4(a)). To demonstrate this, the applicant should survey the proposed exempted area to identify any water supply wells which tap the proposed exempted aquifer. The area to be surveyed should cover the exempted zone and a buffer zone outside the exempted area. The buffer zone should extend a minimum of a 1/4 mile from the boundary of the exempted area. Any water supply wells located should be identified on the map showing the proposed exempted area.

If no water supply wells would be affected by the exemption, the request should state that a survey was conducted and no water supply wells are located which tap the aquifer to be exempted within the proposed area. If the exemption pertains to only a portion of an aquifer, a demonstration must be made that the waste will remain in the exempted portion. Such a demonstration should consider among other factors, the pressure in the injection zone, the waste volume, injected waste characteristics (i.e., specific gravity, persistence, etc.) in the life of the facility.

Specific Information

§146.4(b)(1) It cannot now and will not in the future serve as a source of drinking water because: it is mineral, hydrocarbon, or geothermal energy producing or can be demonstrated by a permit applicant as part of a permit application for a Class II or III operation to contain minerals or hydrocarbons that considering their quantity and location are expected to be commercially producible.

If the proposed exemption is to allow a Class II enhanced oil recovery well or an existing Class III injection well operation to continue, the fact that it has a history of hydrocarbon or mineral production will be sufficient proof that this standard is met. Many times it may be necessary to slightly expand an existing well field to recover minerals or hydrocarbons. In this case, the applicant must show only that the exemption request is for expanding the previously exempted aquifer and state his reasons for believing that there are commercially producible quantities of minerals within the expanded area.

Applicants for aquifer exemptions to allow new in-situ mining must demonstrate that the aquifer is expected to contain commercially producible quantities of minerals. Information to be provided may include: a summary of logging which indicates that commercially producible quantities of minerals are present, a description of the mining method to be used, general information on the mineralogy and geochemistry of the mining zone, and a development timetable. The applicant may also identify nearby projects which produce from the formation proposed for exemption. Many Class III injection well permit applicants may consider much information concerning production potential to be proprietary. As a matter of policy, some States do not allow any information submitted as part of a permit application to be confidential. In those cases where potential production information is not being submitted, it may be necessary for EPA to participate with the State in discussions with the applicant to obtain sufficient evidence to indicate that the ore zone is commercially producible. The information to be discussed would include the results of any R & D pilot project.

Exemptions relating to any new Class II wells which will be injecting into a producing or previously produced horizon should include the following types of information.

- a . Production history of the well if it is a former production well which is being converted.

- b. Description of any drill stem tests run on the horizon in question. This should include information on the amount of oil and water produced during the test.
- c. Production history of other wells in the vicinity which produce from the horizon in question.
- d. Description of the project, if it is an enhanced recovery operation including the number of wells and there location.

§146.4(b)(2) It cannot now and will not in the future serve as a source of drinking water because: It is situated at a depth or location which makes recovery of water for drinking water purposes economically or technologically impractical:

EPA consideration of an aquifer exemption request under this provision would turn on: The availability of alternative supplies, the adequacy of alternatives to meet present and future needs, and a demonstration that there are major costs for treatment and or development associated with the use of the aquifer.

The economic evaluation, submitted by the applicant, should consider the above factors, and these that follow:

- 1. Distance from the proposed exempted aquifer to public water supplies.
- 2. Current sources of water supply for potential users of the proposed exempted aquifer.
- 3. Availability and quality of alternative water supply sources.
- 4. Analysis of future water supply needs within the general area.
- 5. Depth of proposed exempted aquifer.
- 6. Quality of the water in the proposed exempted aquifer.

Costs to develop the proposed exempted aquifer as a water supply source including any treatment costs and costs to develop alternative water supplies. This should include costs for well construction, transportation, and water treatment for each source.

§146.4(b)(3) It cannot now and will not in the future serve source of drinking water because: It is so contaminated that it would be economically or technologically impractical to render that water fit for human consumption.

Economic considerations would also weigh heavily in EPA's decision on aquifer exemption requests under this section. Unlike the previous section, the economics involved are controlled by the cost of technology to render water fit for human consumption. Treatment methods can

usually be found to render water potable. However, costs of that treatment may often be prohibitive either in absolute terms or compared to the cost to develop alternative water supplies.

EPA's evaluation of aquifer exemption requests under this section will consider the following information submitted by the applicant:

- (a) concentrations and types of contaminants in the aquifer.
- (b) source of contamination.
- (c) whether contamination source has been abated.
- (d) extent of contaminated area.
- (e) probability that the contaminant plume will pass the through proposed exempted area.
- (f) ability of treatment to remove contaminants from ground water.
- (g) chemical content of proposed injected fluids.
- (h) current water supply in the area.
- (i) alternative water supplies.
- (j) costs to develop current and probable future water supplies, cost to develop water supply from proposed exempted aquifer. This should include well construction costs, transportation costs, water treatment costs, etc.
- (k) projections on future use of the proposed aquifer.

§146.4(b)(4) It cannot now and will not in the future serve as a source of drinking water because: It is located over a Class III mining area subject to subsidence or catastrophic collapse:

An aquifer exemption request under this section should discuss the proposed mining method and why that method necessarily causes subsidence or catastrophic collapse. The possibility that non-exempted underground sources of drinking would be contaminated due to the collapse should also be addressed in the application.

§146.4(c) The Total Dissolved Solids content of the ground water is more than 3,000 and less than 10,000 mg/l and it is not reasonably expected to supply a public water system.

An application under this provision must include information about the quality and availability of water from the aquifer proposed for exemption. Also, the exemption request must analyze the potential for public water supply use of the aquifer. This may include: a description of current

sources of public water supply in the area, a discussion of the adequacy of current water supply sources to supply future needs, population projections, economy, future technology, and a discussion of other available water supply sources within the area.

1.0 Purpose and Scope

The 1980 amendments to the Safe Drinking Water Act (SDWA) added a new Section 1425 which provides an alternative means for States to acquire primary enforcement responsibility for the control of underground injection related to the recovery and production of oil and natural gas. This document contains guidance on: (1) how States may apply for approval under Section 1425; and (2) the criteria EPA will use in approving or disapproving applications under Section 1425.

EPA is mindful of the fact that, in enacting Section 1425, Congress intended that States be offered an alternative to the detailed requirements of the regulations promulgated at 40 CFR 122 [144], 123 [145], 124 and 146, and that State programs to control injections related to oil and gas production be considered on their merits. Nevertheless, Section 1425 does require a State to demonstrate that such portion of its Underground Injection Control (UIC) program: (1) meets the requirements of Section 1421(b)(1)(A) through (D); and (2) represents an effective program to prevent injection which endangers drinking water sources. Further, Section 1425 requires the Administrator of EPA to approve or disapprove such portion of a State's UIC program for primary enforcement responsibility based on his judgment of whether the State has succeeded in making the required demonstrations.

Consequently, EPA believes that States are entitled to guidance on the implementation of Section 1425. The procedures and criteria contained in this document were developed in consultation with interested States. They represent a “model” State application and program which, in EPA's view, meet the requirements of the amended SDWA. A State application which conforms to these procedures and meets the suggested criteria should be approvable under Section 1425.

A State may choose to apply in a different form and make demonstrations different from those suggested in this document. EPA will consider such applications. However, they will have to be reviewed on a case-by-case basis to determine whether they meet the requirements of the Act. Such reviews may involve additional requests for information, more time and less assurance of ultimate approval.

This guidance and the regulations promulgated at 40 CFR 122 [144], 123 [145], 124 and 146 are both aimed at achieving the same fundamental objective: the protection of underground sources of drinking water from endangerment by well injection. There are, however, some significant differences between them.

The most immediate difference is that one is a regulation and the other is guidance. This was a deliberate choice on the part of the Agency because it does not view the new Congressional mandate as requiring another set of detailed regulations for its implementation. In any event, there is insufficient time to develop such regulations in light of the short time remaining before State program submissions are due under Section 1422(b)(1)(A) of the SDWA.

A further difference is that State program submissions under Section 1422(b)(1) of the SDWA are required to meet a different legal standard from State program submissions under Section 1425. Under Section 1422(b)(1)(A), the State is required to make a showing that its UIC program “meets the requirements of regulations in effect under Section 1421; ...” Under Section 1425, the State is required to demonstrate that the Class II portion of its UIC program meets the requirements of Section 1421(b)(1)(A) through (D) and represents an effective program to prevent underground injection which endangers drinking water sources.

As a consequence of these differences, this guidance is much less detailed than the regulations and leaves a great deal more discretion to the State to develop and EPA to approve State UIC programs under Section 1425.

2.0 Applications

2.1 Definition

For the purposes of Section 1425 of the SDWA:

1. the underground injection of brine or other fluids which are brought to the surface in connection with oil or natural gas production; and
2. any underground injection for the secondary or tertiary recovery of oil or natural gas; and
3. any injection for the storage of hydrocarbons which are liquid at standard temperature and pressure;

shall be defined as “class II” injections or wells.

2.2 Need for an Underground Injection Control (UIC) Program

Any State which has Class II wells must have an UIC program to assure that such wells do not endanger underground sources of drinking water (USDWs). A State may submit its Class II program to EPA for approval. If EPA approves the program, the State has primary enforcement responsibility for that portion of its UIC program.

If a State chooses not to apply, or if its program is disapproved, or if subsequent to approval the State loses primary enforcement responsibility because the Administrator determines, under Section 1425(c)(2), that the demonstration is no longer valid, EPA must prescribe and implement a program in that State. When EPA implements a Class II program for a State, it will do so in accordance with the requirements of 40 CFR 122 [144], 124 and 146.

A State which does not have any Class II wells need not develop a Class II control program in order to qualify for primacy under the UIC program. Under the regulations at 40 CFR 123.51 [145.21] (d), such a State only needs to demonstrate that Class II wells cannot legally occur until the State has developed an approved program to regulate such injections.

2.3 Applications under Section 1425

Any State which has Class II wells may, at its option apply for primacy for its Class II UIC program either: (1) under the regulations at 40 CFR 122 [144], 123 [145], 124 and 146; or (2) under Section 1425 of the SDWA.

2.4 When Should Application be Made?

House Report No. 96-1348, accompanying the 1980 amendments, states on page 5 that: “The Committee expects that alternative demonstrations will be submitted on the same schedule. Accordingly, as demonstrations required for state programs meeting Federal regulations promulgated under Section 1421(b).” States have 270 days from July 24, 1980 to submit applications, or until April 20, 1981.

This period may be extended by up to another 170 days by the Regional Administrators for “good cause”, or until January 15, 1982.

A State need not wait until it is ready to submit its application for all classes of wells. EPA will entertain partial applications for primacy as long as the program for which approval is sought covers: (1) all elements of a program to regulate a particular class or classes of injection practices even if the class or classes involve the jurisdiction of more than one State agency; or (2) all elements of a program to regulate all the classes or types of wells within the jurisdiction of a single State agency. However, if a State submits a partial application, the alternative demonstration under Section 1425 may be used only for the Class II portion of the application. The portion of the program covering types of practices other than Class II will have to meet the requirements of 40 CFR 122 [144], 123 [145], 124 and 146.

2.5 Effects of a Partial Application

The recent amendments have changed Section 1443 of the SDWA so that a State may receive grant support until July 1982. After that date, it must have achieved full primacy in order for grant eligibility to continue. As a consequence, a State may receive partial primacy for its Class II control program and continue to receive grants: (1) if it has obtained an extension for submitting the remainder of its application; (2) until it declares its intention not to file any further applications; (3) until EPA terminates its grant for cause; or (4) until July 1982, whichever is soonest.

If a State receives full primacy, its eligibility for grants will, of course, continue.

3.0 Elements of an Application for Primacy under Section 1425

3.1 Elements of a State Application

A complete State submission should contain the following elements:

- a. a letter from the Governor;
- b. a description of the program;
- c. a statement of legal authority;
- d. copies of the pertinent statutes and regulations;
- e. copies of the pertinent State forms; and
- f. a signed copy of a Memorandum of Agreement.

The nature of these elements is described further below.

3.2 Letter from the Governor

The letter from the Governor should:

- a. request approval of the State's program for primacy under the UIC program;
- b. specify whether approval is sought under Section 1425 of the SDWA, or under 40 CFR 122 [144], 123 [145], 124, and 146; and
- c. affirm that the State is willing and able to carry out the program described.

3.3 Program Description

A State's application is expected to contain a full description of the program for which approval is sought, in sufficient detail to enable EPA to make the judgments outlined in Section 5 below. Such a description should:

- a. specify the structure, coverage and scope of the program;
- b. specify the State permitting process and address, to the extent applicable, the following elements:
 - 1. who applies for the permit or the authorization by rule;

2. signatories required for permit application and reports;
 3. conditions applicable to permits, including: duty to comply with permit conditions, duty to reapply, duty to halt or reduce activity, duty to mitigate, proper operation and maintenance, permit actions, property rights, inspection and entry, monitoring, record keeping, and reporting requirements;
 4. compliance schedules;
 5. transfer of permits;
 6. termination of permits;
 7. whether area permits or project permits are granted;
 8. emergency permits;
 9. the availability and use of variances and other discretionary exemptions to programmatic requirements; and
 10. administrative and judicial procedures for the modification of permits.
- c. describe the operation of any rules used by the State to regulate Class II wells;
 - d. describe the technical requirements applied to operators by the State program;
 - e. include a description of the State's procedures for monitoring, inspection and requiring reporting from operators;
 - f. discuss the State's enforcement program, e.g.:
 1. administrative procedures for dealing with violations;
 2. nature and amounts of penalties, fines and other enforcement tools;
 3. criteria for taking enforcement actions; and
 4. if the State is seeking approval for an existing program, summary data on:
 - A. past practice in the use of enforcement tools;

- B. current compliance/non-compliance with State requirements;
 - C. repeat violations at the same well or by the same operator at different wells;
 - D. well failure rates; and
 - E. USDW contamination cases based on actual field work and citizen complaints.
- g. detail the State's staffing and resources, and demonstrate that these are sufficient to carry out the proposed program;
 - h. if more than one State agency is involved in the Class II program, describe their relationships with regard to carrying out the Class II program;
 - I. contain a reasonable schedule for completion of an inventory of Class II wells in the State;
 - j. include the procedures for exempting aquifers, a list of the aquifers or portions of aquifers proposed for exemption at the time of application, and the reasons for the proposed exemptions, unless these have been described in other partial applications made by the State;
 - k. contain a plan (including the basis for assigning priorities) for the review of all existing Class II wells in the State within five years of program approval to assure that they meet current non-endangerment requirements of the State (this may include permit modification and reissuance, if appropriate);
 - l. describe State requirements for ensuring public participation in the process of issuing permits and modifying permits in the case of substantial changes in the project area, injection pressure or the injection horizon; and
 - m. describe State procedures for responding to complaints by the public.

3.4 Statement of Legal Authority

The statement of legal authority is intended to assure EPA that the State has the legal authority to carry out the program described. It may be signed by a competent legal officer of the State, for example, the Attorney General, the Counsel for the responsible State agency, or any other officer who represents the Agency in legal matters.

The statement may, at the option of the State, consist of a full analysis of the legal basis for the State program, including case law as appropriate. Or the statement may consist of a simple certification by the legal representative that the State has adequate authority to carry out the described program. If the State chooses to submit a certification, the program description should detail the legal authority on which the various elements of the State's program rest.

3.5 Copies of Statutes and Regulations

The application should contain copies of all applicable State statutes, rules and regulations, including those governing State administrative procedures.

3.6 Copies of State Forms

The application should contain examples of all forms used by the State in administering the program, including application forms, permit forms and reporting forms.

3.7 Memorandum of Agreement

The head of the cognizant State agency and the EPA Regional Administrator shall execute a memorandum of agreement which shall set forth the terms under which the State will carry out the described program and EPA will exercise its oversight responsibility. A copy of such an agreement signed by the Director of the State agency, shall be submitted as part of the application.

At a minimum, the memorandum of agreement should:

- a. Include a commitment by the State that the program will be carried out as described and be supported by an appropriate level of staff and resources;
- b. Recognize EPA's right of access to any pertinent State file;
- c. Specify the procedures (e.g., notification to the State and participation by State officials) governing EPA inspections of wells or operator records;
- d. Recognize EPA's authority to take Federal enforcement action under Section 1423 of the SDWA in cases where the State fails to take adequate enforcement actions;
- e. Agree to provide EPA with an annual report on the operation of the State program, the content of which may be negotiated between EPA and primacy States from time to time;

- f. Provide that aquifer exemptions for Class II wells be consistent with aquifer exemptions for the rest of the UIC program;
- g. When appropriate, may include provisions for joint processing of permits by the State and EPA for facilities or activities which require permits from both EPA and the State under different programs; and
- h. Specify that if the State proposes to allow any mechanical integrity tests other than those specified or justified in the program application, the Director will notify the cognizant Regional Administrator and provide enough information about the proposed test that a judgment about its usefulness and reliability may be made.

4.0 Process for Approval or Disapproval of Application

4.1 Public Participation by States

Section 1425 relieves States of the responsibility to hold public hearings or afford an opportunity for public comment prior to submitting an application to EPA. Therefore, when application is made by a State under Section 1425, it may, but need not, provide an opportunity for public hearings or comments.

4.2 Complete Applications

Within 10 working days of the receipt of a final application, EPA will determine whether the application is complete or not and so notify the State in writing. If the application is found to be incomplete it will be returned to the State with specific requests for additional material or changes. However, the State may, at its option, insist that EPA complete its review of an application as submitted.

4.3 EPA Review

- a. EPA has 90 days to approve or disapprove an application. If EPA finds that the application is complete, the review period will be deemed to have begun on the date the application was received in the cognizant Regional Office. If an application has been found to be incomplete and the State insists that EPA proceed with its review of the application as submitted, the review period will begin on the date that EPA receives the State's request to proceed in writing. The review period may be extended by the mutual consent of EPA and the State.
- b. Within the 90-day period, EPA will request public comments and provide an opportunity for public hearing on each application, in the applying State, in

accordance with 40 CFR 123.54 [145.31](c) and (d). If the State has not done so, EPA will hold at least one public hearing in the State.

- c. If a State's application is approved, the State shall have primary enforcement responsibility for its Class II program.
- d. If a State's application is disapproved, EPA intends within 90 days of disapproval or as soon thereafter as feasible, prescribe a Class II program for the State in accordance with Section 1422(c) of the SDWA and 40 CFR 122 [144], 124 and 146.

5.0 Criteria for Approving or Disapproving State Programs

5.1 General

Section 1425 of the SDWA states that: “. . . the State may demonstrate that [the Class II] portion of the State program meets the requirements of subparagraphs (A) through (D) of Section 1421 (b)(1) and represents an effective program (including adequate recordkeeping and reporting) to prevent underground injection which endangers drinking water sources.”

Thus Section 1425 requires that a State, in order to receive approval for its Class II program under the optional demonstration, make a successful showing that its program meets five conditions:

- a. Section 1421(b)(1)(A) requires that an approvable State program prohibit any underground injection in such State which is not authorized by permit or rule.
- b. Section 1421(b)(1)(B) requires that an approvable State program shall require that:
 - 1. the applicant for a permit must satisfy the State that the underground injection will not endanger drinking water sources; and
 - 2. no rule may be promulgated which authorizes any underground injection which endangers drinking water sources.
- e. Section 1421(b)(1)(C) requires that an approvable State program include inspection, monitoring, recordkeeping, and reporting requirements.
- d. Section 1421(b)(1)(D) requires that an approvable State program apply to: (1) underground injections by Federal agencies; and (2) underground injections by any other person, whether or not occurring on property owned or leased by the United States.

- e. Section 1425(a) requires that an approvable State program represent an effective program to prevent underground injection which endangers drinking water sources.

The following sections provide guidance to EPA personnel making the required judgments with respect to these five conditions in the review of an application for approval under Section 1425.

5.2 Section 1421(b)(1)(A)

The question of whether a State program prohibits unauthorized Class II injections is a function of the State's statutory and regulatory authority. A determination of whether the State program meets this condition should be made from a review of the coverage and scope of the program, the statement of legal authority submitted by the State, and of the statutes and regulations themselves. One important consideration is whether the State has an appropriate formal mechanism for modifying permits in cases where the operation has undergone significant change.

5.3 Section 1421(b)(1)(B)

The determination of whether a State program is adequate in requiring that the applicant demonstrate that the proposed injection will not endanger drinking water sources turns on two elements: (1) whether the State program places on the applicant the burden of making the requisite showing; and (2) the extent of the information the applicant is required to provide as a basis for the State agency's decision. Whether the burden of making the requisite showing is on the applicant should be determined from the State's description of its permitting process. If the necessary information is available in State files, the Director need not require it to be submitted again. However, as a matter of principle, the applicant should not escape ultimate responsibility for assuring that the information about his operation is accurate and available. One consideration in this regard is whether the well operator has a responsibility to inform the permitting authority about any material change in his operation, or any pertinent information acquired since the permit application was made.

With regard to the extent of the information to be considered by the Director, the State program should require an application containing sufficiently detailed information to make a knowledgeable decision to grant or deny the permit. Such information should include:

- a. A map showing the area of review and identifying all wells of public record penetrating the injection interval;
- b. A tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data should include a description of each well's type, construction, date of drilling, location, depth, record of plugging and/or completion, and any additional information the Director may require;

- c. Data on the proposed operation, including:
 - 1. Average and maximum daily rate and volume of fluids to be injected;
 - 2. Average and maximum injection pressure; and
 - 3. Source, and an appropriate analysis of injection fluid if other than produced water, and compatibility with the receiving formation;
- d. Appropriate geological data on the injection zone and confining zones including lithologic description, geological name, thickness, and depth;
- e. Geologic name, and depth to bottom of all underground sources of drinking water which may be affected by the injection;
- F. Schematic drawings of the surface and subsurface construction details of the system;
- g. Proposed stimulation program;
- h. All available logging and testing data on the well; and
- I. The need for corrective action on wells penetrating the injection zone in the area of review.

There are two circumstances under which the Director may require less information from the applicant. First, the Director need not require an applicant to resubmit information which is up-to-date and readily available in State files. Second, a State's application may outline circumstances or conditions where certain items of information may not be required in a specific case. Such circumstances may include situations where, based upon demonstrable knowledge available to the Director about a specific operation, the Director proposes to permit that operation without requiring corrective action or alternatives to it. Examples of such circumstances are gravity or vacuum injections and injections through zones of plastic heaving shales.

Section 1421(b)(1)(B) also requires a State which authorizes Class II injections by rule to show that such rules do not allow any underground injection which endangers drinking water sources. The determination of whether the State program meets this requirement may be made from the program description, statement of legal authority, the text of the rules themselves, and the manner in which the State has administered such rules.

5.4 Section 1421(b)(1)(C)

This section of the SDWA requires that an approvable State program contain elements for inspection, monitoring, recordkeeping and reporting. The adequacy of the State program in these respects may be assessed with the use of the following criteria.

a. Inspection

An approvable State program is expected to have an effective system of field inspection which will provide for:

1. Inspections of injection facilities, wells, and nearby producing wells; and
2. The presence of qualified State inspectors to witness mechanical integrity tests, corrective action operations, and plugging procedures.

An adequate program should insure that, at a minimum, 25% of all mechanical integrity tests performed each year will be witnessed by a qualified State inspector.

b. Monitoring, Reporting and Recordkeeping

1. The Director should have the authority to sample injected fluids at any time during injection operation.
2. The operator should be required to monitor the injection pressure and injection rate of each injection well at least on a monthly basis with the results reported annually.
3. The Director should require prompt notice of mechanical failure or downhole problems in injection wells.
4. The State should assure retention and availability of all monitoring records from one mechanical integrity test to the next (i.e., 5 years).

5.5 Section 1421(b)(1)(D)

An approvable State program must demonstrate the State's authority to regulate injection activities by Federal agencies and by any other person on property owned or leased by the United States. The adequacy of the State's authority in these regards may be assessed on the basis of the program description and statement of legal authority submitted by the State. Such authority and the programs to carry it out must be in place at a time no later than the approval of the program by EPA. EPA will administer the UIC program on Indian lands unless the State has the authority and is willing to assume responsibility.

5.6 Section 1425(a)

In addition to the four demonstrations discussed above, Section 1425 requires a State to demonstrate that the Class II program for which it seeks approval in fact "represents an effective program to prevent underground injection which endangers drinking water sources." Among the factors that EPA will consider in assessing the effectiveness of a State program are: (1) whether the State has an effective permitting process which results in enforceable permits; (2) whether the State applies certain minimum technical requirements to operators by permit or rule; (3) whether the State has an effective surveillance program to determine compliance with its requirements; (4) whether the State has effective means to enforce against violators; and (5) whether the State assures adequate participation by the public in the permit issuance process.

Evidence of the presence or absence of ground water contamination is important. However, it cannot serve as the sole criterion of effectiveness. Not all States have collected such evidence systematically. More importantly, the absence of evidence of contamination, especially if based on an absence of complaints, is not necessarily proof that ground water contamination has not occurred.

Each of the five factors named above is discussed further in the following subsections. In its review of these factors, EPA is not necessarily looking for a minimum set or even any particular elements. The effectiveness of a State program will be assessed by reviewing the State's entire program. The absence of even an important element in a State program may not by itself mean that the program is ineffective as long as there is a credible program for detecting and eliminating injection practices which allow any migration which endangers drinking water sources.

a. Permitting Process

Section 3.3 b of the Program Description outlines the major elements of the permitting process. The listing of these considerations should not be viewed as Federally imposed minimum policy, but rather as an outline of the information which will be necessary for EPA to evaluate the effectiveness of the State's permitting process.

States may deal with permitting considerations, such as limitations on the transfer of permits, in a variety of ways. There are many permitting approaches which may be equally effective. EPA's review will turn on whether the permitting process, taken as a whole, represents an effective mechanism for applying appropriate and enforceable requirements to operators.

b. Technical Criteria

Any approvable State program should have the authority to apply, by permit or rule, certain technical requirements designed to prevent the migration of injected or formation fluids into USDWs. Any State program adopting the language of 40 CFR 146 should be considered approvable on its face

value for that portion of the program to which it applies. State applications not relying on the language of 40 CFR 146 should be reviewed for the presence and adequacy of the following kinds of technical requirements in the State program.

1. Siting

Siting requirements should be considered in the placement and construction of any Class II disposal well. Such requirements should be designed to assure that disposal zones are hydraulically isolated from underground sources of drinking water (USDWs). Such isolation may be shown through information supplied by the applicant, or data, on file with the State, which would be analyzed by qualified State staff.

2. Construction

A. Effective programs should require all newly drilled Class II wells to be cased and cemented to prevent movement of fluids into USDWs. Specific casing and cementing requirements should be based on:

- I. the depth to the base of the USDW;
- ii. the nature of the fluids to be injected; and
- iii. the hydrologic relationship between the injection zone and the base of the USDW.

B. All newly converted Class II wells should be required to demonstrate mechanical integrity.

3. Operation

A. Adequate operating requirements should establish a maximum injection pressure for a well which assures that the pressure in the injection zone during injection does not initiate new fractures or propagate existing fractures in the confining zone. Limitations on injection pressure should also preclude the injection from causing the movement of fluids into an underground source of drinking water.

Acceptable methods for establishing limitations on injection pressures include:

- I. Calculated fracture gradients;

- ii. Injectivity tests to establish fracture pressure; or
 - iii. Other compelling geologic, hydrologic or engineering data.
- B. An effective State program should have the demonstrated ability to detect and remedy system failures discovered during routine operation or monitoring so as to mitigate endangerment to USDWs.

4. Plugging and Abandonment

Plugging and abandonment requirements should be reviewed for the presence of the following elements:

- A. That appropriate mechanisms are available in the State program to insure the proper plugging of wells upon abandonment;
- B. That all Class II wells are required, upon abandonment, to be plugged in a manner which will not allow the movement of fluids into or between USDWs; and
- C. That operators are required to maintain financial responsibility in some form, for the plugging of their injection wells.

5. Area of Review

An effective State program is expected to incorporate the concept of an area of review defined as a radius of not less than 1/4 mile from the well, field, or project.

Alternatively, a State program may substitute a concept of a zone of endangering influence in lieu of this fixed radius. The zone of endangering influence should be determined for the estimated life of the well, field, or project through the use of an appropriate calculation, formula, or mathematical model that takes the relevant geologic, hydrologic, engineering and operational features of the injection well, field or project into account.

6. Corrective Action

An approvable State program is expected to include the authority to require the operator to take corrective actions on wells within the area of review or zone of endangering influence.

- A. Corrective action may include any of the following types of requirements:

- I. recementing;
 - ii. workover;
 - iii. reconditioning; or
 - iv. plugging or replugging.
- B. A State program may provide the Director the discretion to specify the following types of requirements in lieu of immediate corrective action:
- I. permit conditions which will assure a negative hydraulic gradient at the base of USDW at the well in question;
 - ii. monitoring program (i.e., monitoring wells completed to the base of USDW within the zone of influence); or
 - iii. periodic testing to determine fluid movement outside the injection interval at other wells within the area of review.

However, if monitoring or testing indicate the potential endangerment of any USDW, corrective action shall be required.

- C. In cases where the Director has demonstrable knowledge of geologic, hydrologic, or engineering conditions, specific to a given operation, which assure that wells within the zone of endangering influence or area of review will not serve as conduits for migration of fluids into an USDW, a State program may provide the Director the discretion to permit a specific operation without requiring corrective actions or any of the alternatives specified in Subsection (8) above. Examples of such circumstances are gravity or vacuum injections and injections through zones of plastic heaving shales. However, under the statute the State program may, in no circumstances, authorize an injection which endangers drinking water sources.

7. Mechanical Integrity

An approvable State program is expected to require the operator to demonstrate the mechanical integrity of a new injection well prior to operation and of all injection wells

periodically, at least once every five years. For the purpose of assessing the State's mechanical integrity requirements:

- A. An injection well has mechanical integrity if:
 - I. there is no significant leak in the casing, tubing or packer; and
 - ii. there is no significant fluid movement into an underground source of drinking water through vertical channels adjacent to the well bore.
- B. The following tests are considered to be acceptable tests to demonstrate the absence of significant leaks:
 - I. a pressure tests with liquid or gas;
 - ii. the monitoring of annulus pressure in those wells injecting at a positive pressure, following an initial pressure test; or
 - iii. all other tests or combinations of tests considered effective by the Director.
- C. The following are considered to be acceptable tests to demonstrate the absence of significant fluid movement in vertical channels adjacent to the well bore:
 - I. cementing records (they need not be reviewed every five years);
 - ii. tracer surveys;
 - iii. noise logs;
 - iv. temperature surveys; or
 - v. any other test or combination of tests considered effective by the Director.
- D. If the State program allows or specifies alternative tests under B(iii) or (C)(v) above, the program description should supply sufficient information so that the usefulness and reliability of such tests in the proposed circumstance may be assessed.

c. Surveillance

The demonstration of an effective surveillance program has already been discussed in Section 5.4 above.

d. Enforcement

A State's enforcement of its program is a crucial consideration in making the judgment of whether the State program is effective. States have used a number of enforcement tools to shift the economic incentive of operation more toward compliance with the law. Often State programs have employed civil penalties and, for repeat or willful violators, criminal fines or jail sentences. Other commonly used practices are administrative orders and court injunctions. In the area of oil and gas regulation, many States have found pipeline severance a powerful tool. In assessing a State's enforcement program, EPA will consider not whether a State has all or any particular enforcement tools but whether the State's program, taken as a whole, represents an effective enforcement effort. Certainly, there are many enforcement matrices which create effective programs. In addition, EPA will look at whether the State has exercised its enforcement authorities adequately in the past.

e. Public Participation

One factor to be used by EPA in assessing the "effectiveness" of a State program is the degree to which it assures the public an opportunity to participate in major regulatory decisions. It is assumed that most States already have legislation that governs public participation in State decision-making and defines such processes as appeals, etc. Therefore, the following represents only a minimal list of elements that EPA will consider:

1. Public Notice of permit application:
 - A. The State may give such notice or it may require the applicant to give notice.
 - B. The method of giving notice should be adequate to bring the matter to the attention of interested parties and, in particular, the public in the area of the proposed injection. This may involve one or more of the following:
 - I. posting;
 - ii. publication in an official State register;
 - iii. publication in a local newspaper;

- iv. mailing to a list of interested persons; or
 - v. any other effective method that achieves the objective.
 - C. An adequate notice should:
 - I. provide an adequate description of the proposed action;
 - ii. identify where an interested party may obtain additional information. This location should be reasonably accessible and convenient for interested persons;
 - iii. state how a public hearing may be requested; and
 - iv. allow for a comment period of at least 15 days.
- 2. The State program should provide opportunity for a public hearing if the Director finds, based upon requests, a significant degree of public interest.
 - A. The Director may hold a hearing of his own motion and give notice of such hearing with the notice of the application.
 - B. If a public hearing is decided upon during the comment period, notice of public hearing shall be given in a newspaper of general circulation. The hearing should be scheduled no sooner than 15 days after the notice.
- 3. The final State action on the permit application should contain a “response to comments” which summarizes the substantive comments received and the disposition of the comments.

6.0 Oversight

6.1 General

Once a Class II program is approved under Section 1425, the State has primary enforcement responsibility for such portion of its UIC program. The Class II program is a grant-eligible activity and is subject to the same EPA oversight as other portions of the UIC program (e.g., State/EPA Agreements, Mid-course Reviews, grant conditions, etc.).

6.2 Mid-Course Evaluation

EPA will conduct a mid-course evaluation of Class II programs as envisioned in 40 CFR 122.18 [144.8] (c)(4)(ii) and 146.25. However, in lieu of a special reporting requirement, additional requirements have been added to the State's annual report to EPA. Should this mechanism prove unable to provide the necessary data, a special reporting requirement may be negotiated with the primacy States at a later date.

6.3 Annual Reporting

As part of the Memorandum of Agreement, each State shall agree to submit an annual report on the operation of its Class II program to EPA. At a minimum the annual report shall contain:

- a. an updated inventory;
- b. a summary of surveillance programs, including the results of monitoring and mechanical integrity testing, the number of inspections, and corrective actions ordered and witnessed;
- c. an account of all complaints reviewed by the State and the actions taken;
- d. an account of the results of the review of existing wells made during the year; and
- e. a summary of enforcement actions taken.

Checklist for**UIC Regulations Submitted with Primacy Applications Under Section 1422 of the SDWA
Legal Authority**

The following table describes the contents of the state and federal rules.

attorney general statement required by 40 CFR 145.24. See the following page for a complete table comparing the

Citation	Federal Rule Language and Criteria	State Citation	Language from or Summary of Relevant Portion of Attorney General Statement	Comments
40 CFR 145.24(a)	<p>40 CFR 145.24 Attorney General's statement</p> <p>Any State that seeks to administer a program under this part shall submit a statement from the State Attorney General (or the attorney for those State or interstate agencies which have independent legal counsel) that the laws of the State, or an interstate compact, provide adequate authority to carry out the program described under §145.23 and to meet the requirements of this part. This statement shall include citations to the specific statutes, administrative regulations, and, where appropriate, judicial decisions which demonstrate adequate authority. State statutes and regulations cited by the State Attorney General or independent legal counsel shall be in the form of lawfully adopted State statutes and regulations at the time the statement is signed and shall be fully effective by the time the program is approved. To qualify as "independent legal counsel" the attorney signing the statement required by this section must have full authority to independently represent the State agency in court on all matters pertaining to the State program.</p> <p>Note: EPA will supply States with an Attorney General's statement format on request.</p>			
	Citations to specific statutes, administrative regulations, and where, appropriate, judicial decisions which demonstrate adequate authority for the UIC program			
	Citations to state statutes or administrative regulations that provide civil penalties			
	Citations to state statutes or administrative regulations that provide criminal penalties			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt "optional" program elements such as authorization by rule.

Citation	Federal Rule Language and Criteria	State Citation	Language from or Summary of Relevant Portion of Attorney General Statement	Comments

40 CFR 124 - Procedures For Decisionmaking Subpart A - General Program Requirements					
124.2*	Definitions (see 144.3)				
40 CFR 124.3(a)(1) (See also 145.11(a)(24))	40 CFR 124.3 Application for a permit Applicable to State programs, see §145.11 (UIC). (1) Any person who requires a permit under the UIC programs shall complete, sign, and submit to the Director an application for each permit required under §144.1 (UIC). Applications are not required for underground injections authorized by rules (§§ 144.21 through 144.26).				
40 CFR 124.3(a)(2) (See also 145.11(a)(24))	The Director shall not begin the processing of a permit until the applicant has fully complied with the application requirements for that permit. See §144.31 (UIC).				
40 CFR 124.3(a)(3) (See also 145.11(a)(24))	Permit applications must comply with the signature and certification requirements of § 144.32 (UIC).				

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt "optional" program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 124.3(d)	If an applicant fails or refuses to correct deficiencies in the application, the permit may be denied and appropriate enforcement actions may be taken under the applicable statutory provision including SDWA sections 1423 and 1424.			
40 CFR 124.4 (a)(1)	40 CFR 124.4 Consolidation of permit processing. Whenever a facility or activity requires a permit under more than one statute covered by these regulations, processing of two or more applications for those permits may be consolidated. The first step in consolidation is to prepare each draft permit at the same time.			
40 CFR 124.4 (a)(2)	Whenever draft permits are prepared at the same time, the statements of basis (required under § 124.7 for EPA-issued permits only) or fact sheets (§ 124.8), administrative records (required under § 124.9 for EPA-issued permits only), public comment periods (§ 124.10), and any public hearings (§ 124.12) on those permits should also be consolidated. The final permits may be issued together. They need not be issued together if in the judgment of the Regional Administrator or State Director(s), joint processing would result in unreasonable delay in the issuance of one or more permits.			
40 CFR 124.4 (b)	Whenever an existing facility or activity requires additional permits under one or more of the statutes covered by these regulations, the permitting authority may coordinate the expiration date(s) of the new permit(s) with the expiration date(s) of the existing permit(s) so that all permits expire simultaneously. Processing of the subsequent applications for renewal permits may then be consolidated.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 124.4 (c)	Processing of permit applications under paragraph (a) or (b) of this section may be consolidated as follows:			
40 CFR 124.4 (c)(1)	The Director may consolidate permit processing at his or her discretion whenever a facility or activity requires all permits either from EPA or from an approved State.			
40 CFR 124.4 (c)(2)	The Regional Administrator and the State Director(s) may agree to consolidate draft permits whenever a facility or activity requires permits from both EPA and an approved State.			
40 CFR 124.4 (c)(3)	Permit applicants may recommend whether or not the processing of their applications should be consolidated.			
40 CFR 124.5(a) (See also 145.11(a)(25))	40 CFR 124.5 Modification, revocation and reissuance, or termination of permits. (Applicable to State programs, see §145.11 (UIC).) Permits may be modified, revoked and reissued, or terminated either at the request of any interested person (including the permittee) or upon the Director's initiative. However, permits may only be modified, revoked and reissued, or terminated for the reasons specified in § 144.39 or 144.40 (UIC). All requests shall be in writing and shall contain facts or reasons supporting the request.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 124.5(b)	If the Director decides the request is not justified, he or she shall send the requester a brief written response giving a reason for the decision. Denials of requests for modification, revocation and reissuance, or termination are not subject to public notice, comment, or hearings. Denials by the Regional Administrator may be informally appealed to the Environmental Appeals Board by a letter briefly setting forth the relevant facts. The Environmental Appeals Board may direct the Regional Administrator to begin modification, revocation and reissuance, or termination proceedings under paragraph (c) of this section. The appeal shall be considered denied if the Environmental Appeals Board takes no action on the letter within 60 days after receiving it. This informal appeal is, under 5 U.S.C. 704, a prerequisite to seeking judicial review of EPA action in denying a request for modification, revocation and reissuance, or termination.			
40 CFR 124.5(c)(1) (See also 145.11(a)(25))	(Applicable to State programs, see 40 CFR 145.11 (UIC)). (1) If the Director tentatively decides to modify or revoke and reissue a permit under 404 CFR 144.39 (UIC), he or she shall prepare a draft permit under § 124.6 incorporating the proposed changes. The Director may request additional information and, in the case of a modified permit, may require the submission of an updated application. In the case of revoked and reissued permits, the Director shall require the submission of a new application.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 124.5(c)(2) (See also 145.11(a)(25))	In a permit modification under this section, only those conditions to be modified shall be reopened when a new draft permit is prepared. All other aspects of the existing permit shall remain in effect for the duration of the unmodified permit. When a permit is revoked and reissued under this section, the entire permit is reopened just as if the permit had expired and was being reissued. During any revocation and reissuance proceeding the permittee shall comply with all conditions of the existing permit until a new final permit is reissued.			
40 CFR 124.5(c)(3) (See also 145.11(a)(25))	“Minor modifications” as defined in § 144.41 (UIC) are not subject to the requirements of this section.			
40 CFR 124.5(d)(1) (See also 145.11(a)(25))	(Applicable to State programs, see §145.11 (UIC) of this chapter.) (1) If the Director tentatively decides to terminate: A permit under § 144.40 (UIC) of this chapter, he or she shall issue a notice of intent to terminate. A notice of intent to terminate is a type of draft permit which follows the same procedures as any draft permit prepared under § 124.6 of this chapter.			
40 CFR 124.5(d)(3)	In the case of EPA-issued permits, a notice of intent to terminate or a complaint shall not be issued if the Regional Administrator and the permittee agree to termination in the course of transferring permit responsibility to an approved State under 145.25(b)(1) (UIC) of this chapter.			
40 CFR 124.6(a) (See also 145.11(a)(26))	40 CFR 124.6 Draft permits. (Applicable to State programs, see §145.11 (UIC).) Once an application is complete, the Director shall tentatively decide whether to prepare a draft permit or to deny the application.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 124.6(b)	If the Director tentatively decides to deny the permit application, he or she shall issue a notice of intent to deny. A notice of intent to deny the permit application is a type of draft permit which follows the same procedures as any draft permit prepared under this section. See § 124.6(e). If the Director's final decision (§ 124.15) is that the tentative decision to deny the permit application was incorrect, he or she shall withdraw the notice of intent to deny and proceed to prepare a draft permit under paragraph (d) of this section.			
40 CFR 124.6(d) (See also 145.11(a)(26))	(Applicable to State programs, see §145.11 (UIC).) If the Director decides to prepare a draft permit, he or she shall prepare a draft permit that contains the following information:			
40 CFR 124.6(d)(1) (See also 145.11(a)(26))	All conditions under §144.51 and 144.42 (UIC);			
40 CFR 124.6(d)(2) (See also 145.11(a)(26))	All compliance schedules under §144.53 (UIC);			
40 CFR 124.6(d)(3) (See also 145.11(a)(26))	All monitoring requirements under §144.54 (UIC); and			
40 CFR 124.6(d)(4)(ii) (See also 145.11(a)(26))	For: *** UIC permits, permit conditions under § 144.52;			
40 CFR 124.6(e) (See also 145.11(a)(26))	(Applicable to State programs, see §145.11 (UIC).) Draft permits prepared by a State shall be accompanied by a fact sheet if required under § 124.8.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 124.8(a) (See also 145.11(a)(27))	40 CFR 124.8 Fact sheet. A fact sheet shall be prepared for every draft permit for a major, UIC facility or activity, and for every draft permit which the Director finds is the subject of wide-spread public interest or raises major issues. The fact sheet shall briefly set forth the principal facts and the significant factual, legal, methodological and policy questions considered in preparing the draft permit. The Director shall send this fact sheet to the applicant and, on request, to any other person.			
40 CFR 124.8(b) (See also 145.11(a)(27))	The fact sheet shall include, when applicable:			
40 CFR 124.8(b)(1) (See also 145.11(a)(27))	A brief description of the type of facility or activity which is the subject of the draft permit;			
40 CFR 124.8(b)(2) (See also 145.11(a)(27))	The type and quantity of wastes, fluids, or pollutants which are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged.			
40 CFR 124.8(b)(4) (See also 145.11(a)(27))	A brief summary of the basis for the draft permit conditions including references to applicable statutory or regulatory provisions;			
40 CFR 124.8(b)(5) (See also 145.11(a)(27))	Reasons why any requested variances or alternatives to required standards do or do not appear justified;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 124.14 (a)(1)	124.14 Reopening of the public comment period. The Regional Administrator may order the public comment period reopened if the procedures of this paragraph could expedite the decisionmaking process. When the public comment period is reopened under this paragraph, all persons, including applicants, who believe any condition of a draft permit is inappropriate or that the Regional Administrator's tentative decision to deny an application, terminate a permit, or prepare a draft permit is inappropriate, must submit all reasonably available factual grounds supporting their position, including all supporting material, by a date, not less than sixty days after public notice under paragraph (a)(2) of this section, set by the Regional Administrator. Thereafter, any person may file a written response to the material filed by any other person, by a date, not less than twenty days after the date set for filing of the material, set by the Regional Administrator.			
40 CFR 124.14 (a)(2)	Public notice of any comment period under this paragraph shall identify the issues to which the requirements of § 124.14(a) shall apply.			
40 CFR 124.14 (a)(3)	On his own motion or on the request of any person, the Regional Administrator may direct that the requirements of paragraph (a)(1) of this section shall apply during the initial comment period where it reasonably appears that issuance of the permit will be contested and that applying the requirements of paragraph (a)(1) of this section will substantially expedite the decisionmaking process. The notice of the draft permit shall state whenever this has been done.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 124.14 (a)(4)	A comment period of longer than 60 days will often be necessary in complicated proceedings to give commenters a reasonable opportunity to comply with the requirements of this section. Commenters may request longer comment periods and they shall be granted under § 124.10 to the extent they appear necessary.			
40 CFR 124.14 (b)	If any data information or arguments submitted during the public comment period, including information or arguments required under § 124.13, appear to raise substantial new questions concerning a permit, the Regional Administrator may take one or more of the following actions:			
40 CFR 124.14 (b)(1)	Prepare a new draft permit, appropriately modified, under § 124.6;			
40 CFR 124.14 (b)(2)	Prepare a revised statement of basis under § 124.7, a fact sheet or revised fact sheet under § 124.8 and reopen the comment period under § 124.14; or			
40 CFR 124.14 (b)(3)	Reopen or extend the comment period under § 124.10 to give interested persons an opportunity to comment on the information or arguments submitted.			
40 CFR 124.14 (c)	Comments filed during the reopened comment period shall be limited to the substantial new questions that caused its reopening. The public notice under § 124.10 shall define the scope of the reopening.			
40 CFR 124.14 (e)	Public notice of any of the above actions shall be issued under § 124.10.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 124.15 (a)	40 CFR 124.15 Issuance and effective date of permit. After the close of the public comment period under § 124.10 on a draft permit, the Regional Administrator shall issue a final permit decision. The Regional Administrator shall notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. This notice shall include reference to the procedures for appealing a decision on a UIC permit under § 124.19 of this part. For the purposes of this section, a final permit decision means a final decision to issue, deny, modify, revoke and reissue, or terminate a permit.			
40 CFR 124.15 (b)	A final permit decision (or a decision to deny a permit for the active life of a RCRA hazardous waste management facility or unit under § 270.29) shall become effective 30 days after the service of notice of the decision unless:			
40 CFR 124.15 (b)(1)	A later effective date is specified in the decision; or			
40 CFR 124.15 (b)(2)	Review is requested on the permit under § 124.19.			
40 CFR 124.15 (b)(3)	No comments requested a change in the draft permit, in which case the permit shall become effective immediately upon issuance.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 124.16 (a)(1)	<p>40 CFR 124.16 Stays of contested permit conditions.</p> <p>Stays. (1) If a request for review of a UIC permit under § 124.19 of this part is filed, the effect of the contested permit conditions shall be stayed and shall not be subject to judicial review pending final agency action. Uncontested permit conditions shall be stayed only until the date specified in paragraph (a)(2)(i) of this section. If the permit involves a new facility or new injection well, new source, new discharger or a recommencing discharger, the applicant shall be without a permit for the proposed new facility, injection well, source or discharger pending final agency action. See also § 124.60.</p>			
40 CFR 124.16 (a)(2)(i)	Uncontested conditions which are not severable from those contested shall be stayed together with the contested conditions. The Regional Administrator shall identify the stayed provisions of permits for existing facilities, injection wells, and sources. All other provisions of the permit for the existing facility, injection well, or source become fully effective and enforceable 30 days after the date of the notification required in paragraph (a)(2)(ii) of this section.			
40 CFR 124.16 (a)(2)(ii)	The Regional Administrator shall, as soon as possible after receiving notification from the EAB of the filing of a petition for review, notify the EAB, the applicant, and all other interested parties of the uncontested (and severable) conditions of the final permit that will become fully effective enforceable obligations of the permit as of the date specified in paragraph (a)(2)(i) of this section .			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 124.16 (b)(1)	Stays based on cross effects. (1) A stay may be granted based on the grounds that an appeal to the Administrator under § 124.19 of one permit may result in changes to another EPA-issued permit only when each of the permits involved has been appealed to the Administrator.			
40 CFR 124.16 (b)(2)	No stay of an EPA-issued UIC permit shall be granted based on the staying of any State-issued permit except at the discretion of the Regional Administrator and only upon written request from the State Director.			
40 CFR 124.16 (c)(1)	Comply with the conditions of that permit during any modification or revocation and reissuance proceeding under § 124.5; and			
40 CFR 124.16 (c)(2)	To the extent conditions of any new permit are stayed under this section, comply with the conditions of the existing permit which correspond to the stayed conditions, unless compliance with the existing conditions would be technologically incompatible with compliance with other conditions of the new permit which have not been stayed.			
40 CFR 124.17(a) (See also 145.11(a)(31))	40 CFR 124.17 Response to comments. (Applicable to State programs, see § 145.11 (UIC).) At the time that any final permit decision is issued under § 124.15, the Director shall issue a response to comments. States are only required to issue a response to comments when a final permit is issued. This response shall:			
40 CFR 124.17(a)(1) (See also 145.11(a)(31))	Specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144 - Underground Injection Control Program Subpart A - General Provisions				
40 CFR 144.1(g)	<p>40 CFR 144.1 Purpose and scope of Part 144.</p> <p><i>Scope of the permit or rule requirement.</i> The UIC permit program regulates underground injection by six classes of wells (see definition of “well injection,” 40 CFR 144.3). The six classes of wells are set forth in 40 CFR 144.6. All owners or operators of these injection wells must be authorized either by permit or rule by the Director. In carrying out the mandate of the SDWA, this subpart provides that no injection shall be authorized by permit or rule if it results in the movement of fluid containing any contaminant into underground sources of drinking water (USDWs –see 40 CFR 144.3 for definition), if the presence of that contaminant may cause a violation of any primary drinking water regulation under 40 CFR part 141 or may adversely affect the health of persons (40 CFR 144.12). Existing Class IV wells which inject hazardous waste directly into an underground source of drinking water are to be eliminated over a period of six months and new such Class IV wells are to be prohibited (40 CFR 144.13). For Class V wells, if remedial action appears necessary, a permit may be required (40 CFR 144.25) or the Director must require remedial action or closure by order (40 CFR 144.6(c)). During UIC program development, the Director may identify aquifers and portions of aquifers which are actual or potential sources of drinking water. This will provide an aid to the Director in carrying out his or her duty to protect all USDWs. An aquifer is a USDW if it fits the definition under § 144.3, even if it has not been “identified.” The Director may also designate “exempted aquifers” using the criteria in 40 CFR 146.4 of this chapter.</p>			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.1(g) continued	Such aquifers are those which would otherwise qualify as “underground sources of drinking water” to be protected, but which have no real potential to be used as drinking water sources. Therefore, they are not USDWs. No aquifer is an exempted aquifer until it has been affirmatively designated under the procedures at § 144.7. Aquifers which do not fit the definition of “underground source of drinking water” are not “exempted aquifers.” They are simply not subject to the special protection afforded USDWs. During initial Class VI program development, the Director shall not expand the areal extent of an existing Class II enhanced oil recovery or enhanced gas recovery aquifer exemption for Class VI injection wells and EPA shall not approve a program that applies for aquifer exemption expansions of Class II-Class VI exemptions as part of the program description. All Class II to Class VI aquifer exemption expansions previously issued by EPA must be incorporated into the Class VI program descriptions pursuant to requirements at § 145.23(f)(9).			
40 CFR 144.1(g)(1)	Specific inclusions. The following wells are included among those types of injection activities which are covered by the UIC regulations. (This list is not intended to be exclusive but is for clarification only.)			
40 CFR 144.1(g)(1)(i)	Any injection well located on a drilling platform inside the State's territorial waters.			
40 CFR 144.1(g)(1)(ii)	Any dug hole or well that is deeper than its largest surface dimension, where the principal function of the hole is emplacement of fluids.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.1(g)(1)(iii)	Any well used by generators of hazardous waste, or by owners or operators of hazardous waste management facilities, to dispose of fluids containing hazardous waste. This includes the disposal of hazardous waste into what would otherwise be septic systems and cesspools, regardless of their capacity.			
40 CFR 144.1(g)(1)(iv)	Any septic tank, cesspool, or other well used by a multiple dwelling, community, or Regional system for the injection of wastes.			
40 CFR 144.1(g)(2)	Specific exclusions. The following are not covered by these regulations:			
40 CFR 144.1(g)(2)(i)	Injection wells located on a drilling platform or other site that is beyond the State's territorial waters.			
40 CFR 144.1(g)(2)(ii)	Individual or single family residential waste disposal systems such as domestic cesspools or septic systems.			
40 CFR 144.1(g)(2)(iii)	Non-residential cesspools, septic systems or similar waste disposal systems if such systems (A) Are used solely for the disposal of sanitary waste, and (B) have the capacity to serve fewer than 20 persons a day.			
40 CFR 144.1(g)(2)(iv)	Injection wells used for injection of hydrocarbons which are of pipeline quality and are gases at standard temperature and pressure for the purpose of storage.			
40 CFR 144.1(g)(2)(v)	Any dug hole, drilled hole, or bored shaft which is not used for the subsurface emplacement of fluids.			
40 CFR 144.1(g)(3)	The prohibition applicable to Class IV wells under § 144.13 does not apply to injections of hazardous wastes into aquifers or portions thereof which have been exempted pursuant to § 146.04.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.3	40 CFR 144.3 Definitions. <i>Administrator</i> means the Administrator of the United States Environmental Protection Agency, or an authorized representative.			
	<i>Application</i> means the EPA standard national forms for applying for a permit, including any additions, revisions or modifications to the forms; or forms approved by EPA for use in approved States, including any approved modifications or revisions.			
	<i>Appropriate Act and regulations</i> means the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act (RCRA); or Safe Drinking Water Act (SDWA), whichever is applicable; and applicable regulations promulgated under those statutes.			
	<i>Approved State Program</i> means a UIC program administered by the State or Indian Tribe that has been approved by EPA according to SDWA sections 1422 and/or 1425.			
	<i>Aquifer</i> means a geological “formation,” group of formations, or part of a formation that is capable of yielding a significant amount of water to a well or spring.			
	<i>Area of review</i> means the area surrounding an injection well described according to the criteria set forth in § 146.06 or in the case of an area permit, the project area plus a circumscribing area the width of which is either 1/4 of a mile or a number calculated according to the criteria set forth in § 146.06.			
	<i>Cesspool</i> means a “drywell” that receives untreated sanitary waste containing human excreta, and which sometimes has an open bottom and/or perforated sides.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
	<i>Contaminant</i> means any physical, chemical, biological, or radiological substance or matter in water.			
	<i>Director</i> means the Regional Administrator, the State director or the Tribal director as the context requires, or an authorized representative. When there is no approved State or Tribal program, and there is an EPA administered program, “Director” means the Regional Administrator. When there is an approved State or Tribal program, “Director” normally means the State or Tribal director. In some circumstances, however, EPA retains the authority to take certain actions even when there is an approved State or Tribal program. In such cases, the term “Director” means the Regional Administrator and not the State or Tribal director.			
	<i>Draft permit</i> means a document prepared under §124.6 indicating the Director's tentative decision to issue or deny, modify, revoke and reissue, terminate, or reissue a “permit.” A notice of intent to terminate a permit, and a notice of intent to deny a permit, as discussed in §124.5 are types of “draft permits.” A denial of a request for modification, revocation and reissuance, or termination, as discussed in §124.5 is not a “draft permit.”			
	<i>Drilling mud</i> means a heavy suspension used in drilling an “injection well,” introduced down the drill pipe and through the drill bit.			
	<i>Drywell</i> means a well, other than an improved sinkhole or subsurface fluid distribution system, completed above the water table so that its bottom and sides are typically dry except when receiving fluids.			
	<i>Eligible Indian Tribe</i> is a Tribe that meets the statutory requirements established at 42 U.S.C. 300j-11(b)(1).			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
	<i>Emergency permit</i> means a UIC “permit” issued in accordance with § 144.34.			
	<i>Environmental Protection Agency</i> (“EPA”) means the United States Environmental Protection Agency.			
	<i>Exempted aquifer</i> means an “aquifer” or its portion that meets the criteria in the definition of “underground source of drinking water” but which has been exempted according to the procedures in §144.7.			
	<i>Existing injection well</i> means an “injection well” other than a “new injection well.”			
	<i>Facility or activity</i> means any UIC “injection well,” or an other facility or activity that is subject to regulation under the UIC program.			
	<i>Fluid</i> means any material or substance which flows or moves whether in a semisolid, liquid, sludge, gas, or any other form or state.			
	<i>Formation</i> means a body of consolidated or unconsolidated rock characterized by a degree of lithologic homogeneity which is prevailingly, but not necessarily, tabular and is mappable on the earth's surface or traceable in the subsurface.			
	<i>Formation fluid</i> means “fluid” present in a “formation” under natural conditions as opposed to introduced fluids, such as “drilling mud.”			
	<i>Generator</i> means any person, by site location, whose act or process produces hazardous waste identified or listed in 40 CFR part 261.			
	<i>Geologic sequestration</i> means the long-term containment of a gaseous, liquid, or supercritical carbon dioxide stream in subsurface geologic formations. This term does not apply to carbon dioxide capture or transport.			
	<i>Ground water</i> means water below the land surface in a zone of saturation.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

	<i>Hazardous waste</i> means a hazardous waste as defined in 40 CFR 261.3.			
	<i>Hazardous waste management facility</i> (“HWM facility”) means all contiguous land, and structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (for example, one or more landfills, surface impoundments, or combination of them). <i>HWM facility</i> means “Hazardous Waste Management facility”			
	<i>Improved sinkhole</i> means a naturally occurring karst depression or other natural crevice found in volcanic terrain and other geologic settings which have been modified by man for the purpose of directing and emplacing fluids into the subsurface.			
	<i>Indian lands</i> means “Indian country” as defined in 18 U.S.C. 1151. That section defines Indian country as: (a) All land within the limits of any Indian reservation under the jurisdiction of the United States government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation; (b) All dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a State; and (c) All Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same.			
	<i>Indian Tribe</i> means any Indian Tribe having a Federally recognized governing body carrying out substantial governmental duties and powers over a defined area.			
	<i>Injection well</i> means a “well” into which “fluids” are being injected.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
	<i>Injection zone</i> means a geological “formation” group of formations, or part of a formation receiving fluids through a “well.”			
	<i>Interstate Agency</i> means an agency of two or more States established by or under an agreement or compact approved by the Congress, or any other agency of two or more States or Indian Tribes having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator under the “appropriate Act and regulations.”			
	<i>Major facility</i> means any UIC “facility or activity” classified as such by the Regional Administrator, or, in the case of approved State programs, the Regional Administrator in conjunction with the State Director.			
	<i>Manifest</i> means the shipping document originated and signed by the “generator” which contains the information required by subpart B of 40 CFR part 262.			
	<i>New injection wells</i> means an “injection well” which began injection after a UIC program for the State applicable to the well is approved or prescribed.			
	<i>Owner or operator</i> means the owner or operator of any “facility or activity” subject to regulation under the UIC program.			
	<i>Permit</i> means an authorization, license, or equivalent control document issued by EPA or an approved State to implement the requirements of this part, parts 145, 146 and 124. “Permit” includes an area permit (§144.33) and an emergency permit (§144.34). Permit does not include UIC authorization by rule (§144.21), or any permit which has not yet been the subject of final agency action, such as a “draft permit.”			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

	<i>Person</i> means an individual, association, partnership, corporation, municipality, state, federal, or tribal agency, or an agency or employee thereof			
	<i>Plugging</i> means the act or process of stopping the flow of water, oil or gas into or out of a formation through a borehole or well penetrating that formation.			
	<i>Point of injection</i> means the last accessible sampling point prior to waste fluids being released into the subsurface environment through a Class V injection well. For example, the point of injection of a Class V septic system might be the distribution box—the last accessible sampling point before the waste fluids drain into the underlying soils. For a dry well, it is likely to be the well bore itself.			
	<i>Project</i> means a group of wells in a single operation.			
	<i>Radioactive Waste</i> means any waste which contains radioactive material in concentrations which exceed those listed in 10 CFR part 20, appendix B, table II, column 2.			
	<i>RCRA</i> means the Solid Waste Disposal Act as amended by the Resource Conservation and Recovery Act of 1976 (Pub. L. 94–580, as amended by Pub. L. 95–609, Pub. L. 96–510, 42 U.S.C. 6901 et seq.).

	<i>Sanitary waste</i> means liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities provided the waste is not mixed with industrial waste.			
	<i>Schedule of compliance</i> means a schedule of remedial measures included in a “permit,” including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the “appropriate Act and regulations.”			
	<i>Septic system</i> means a “well” that is used to emplace sanitary waste below the surface and is typically comprised of a septic tank and subsurface fluid distribution system or disposal system.			
	<i>SDWA</i> means the Safe Drinking Water Act (Pub. L. 93–523, as amended; 42 U.S.C. 300f et seq.).			
	<i>Site</i> means the land or water area where any “facility or activity” is physically located or conducted, including adjacent land used in connection with the facility or activity.			
	<i>State</i> means any of the 50 States, the District of Columbia, Guam, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, the Trust Territory of the Pacific Islands, the Commonwealth of the Northern Mariana Islands, or an Indian Tribe treated as a State.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 	<i>State Director</i> means the chief administrative officer of any State, interstate, or Tribal agency operating an “approved program,” or the delegated representative of the State director. If the responsibility is divided among two or more States, interstate, or Tribal agencies, “State Director” means the chief administrative officer of the State, interstate, or Tribal agency authorized to perform the particular procedure or function to which reference is made.			
	<i>State/EPA agreement</i> means an agreement between the Regional Administrator and the State which coordinates EPA and State activities, responsibilities and programs.			
	<i>Stratum</i> (plural strata) means a single sedimentary bed or layer, regardless of thickness, that consists of generally the same kind of rock material.			
	<i>Subsurface fluid distribution system</i> means an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids below the surface of the ground.			
	<i>Total dissolved solids</i> means the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR part 136.			
	<i>Transferee</i> means the owner or operator receiving ownership and/or operational control of the well.			
	<i>Transferor</i> means the owner or operator transferring ownership and/or operational control of the well.			
	<i>UIC</i> means the Underground Injection Control program under Part C of the Safe Drinking Water Act, including an “approved State program.”			
	<i>Underground injection</i> means a “well injection.”			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 144.7(a) (See also 145.11(a)(3))	40 CFR 144.7 Identification of underground sources of drinking water and exempted aquifers. The Director may identify (by narrative description, illustrations, maps, or other means) and shall protect as underground sources of drinking water, all aquifers and parts of aquifers which meet the definition of “underground source of drinking water” in § 144.3, except to the extent there is an applicable aquifer exemption under paragraph (b) of this section or an expansion to the areal extent of an existing Class II enhanced oil recovery or enhanced gas recovery aquifer exemption for the exclusive purpose of Class VI injection for geologic sequestration under paragraph (d) of this section. Other than EPA approved aquifer exemption expansions that meet the criteria set forth in § 146.4(d) of this chapter, new aquifer exemptions shall not be issued for Class VI injection wells. Even if an aquifer has not been specifically identified by the Director, it is an underground source of drinking water if it meets the definition in § 144.3.			
40 CFR 144.7(b)(1) (See also 145.11(a)(3))	The Director may identify (by narrative description, illustrations, maps, or other means) and describe in geographic and/or geometric terms (such as vertical and lateral limits and gradient) which are clear and definite, all aquifers or parts thereof which the Director proposes to designate as exempted aquifers using the criteria in 40 CFR 146.4.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.13 (d)(1) (See also 145.11(a)(7))	Wells used to inject hazardous waste into aquifers or portions thereof that have been exempted pursuant to § 146.4, if the exempted aquifer into which waste is injected underlies the lowermost formation containing a USDW. Such wells are Class I wells as specified in § 144.6(a)(1), and the owner or operator must comply with the requirements applicable to Class I wells.			
40 CFR 144.13 (d)(2) (See also 145.11(a)(7))	Wells used to inject hazardous waste where no USDW exists within one quarter mile of the well bore in any underground formation, provided that the Director determines that such injection is into a formation sufficiently isolated to ensure that injected fluids do not migrate from the injection zone. Such wells are Class I wells as specified in § 144.6(a)(1), and the owner or operator must comply with the requirements applicable to Class I wells.			
40 CFR 144.14(a) (See also 145.11(a)(8))	40 CFR 144.14 Requirements for wells injecting hazardous waste. (a) Applicability. The regulations in this section apply to all generators of hazardous waste, and to the owners or operators of all hazardous waste management facilities, using any class of well to inject hazardous wastes accompanied by a manifest. (See also § 144.13.)			
40 CFR 144.14(b) (See also 145.11(a)(8))	Authorization. The owner or operator of any well that is used to inject hazardous waste required to be accompanied by a manifest or delivery document shall apply for authorization to inject as specified in § 144.31 within 6 months after the approval or promulgation of the State UIC program.			
40 CFR 144.14(c) (See also 145.11(a)(8))	Requirements. In addition to complying with the applicable requirements of this part and 40 CFR part 146, the owner or operator of each facility meeting the requirements of paragraph (b) of this section, shall comply with the following:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.14(c)(9) (See also 145.11(a)(8))	Certification of closure. When abandonment is completed, the owner or operator must submit to the Director certification by the owner or operator and certification by an independent registered professional engineer that the facility has been closed in accordance with the specifications in § 144.52(a)(6).			
40 CFR 144.15	40 CFR 144.15 Prohibition of non-experimental Class V wells for geologic sequestration. The construction, operation or maintenance of any non-experimental Class V geologic sequestration well is prohibited.			
40 CFR 144.16(a)	40 CFR 144.16 Waiver of requirement by Director. When injection does not occur into, through or above an underground source of drinking water, the Director may authorize a well or project with less stringent requirements for area of review, construction, mechanical integrity, operation, monitoring, and reporting than required in 40 CFR part 146 or § 144.52 to the extent that the reduction in requirements will not result in an increased risk of movement of fluids into an underground source of drinking water.			
40 CFR 144.16(b)	When injection occurs through or above an underground source of drinking water, but the radius of endangering influence when computed under § 146.06(a) is smaller or equal to the radius of the well, the Director may authorize a well or project with less stringent requirements for operation, monitoring, and reporting than required in 40 CFR part 146 or § 144.52 to the extent that the reduction in requirements will not result in an increased risk of movement of fluids into an underground source of drinking water.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.16(c)	When reducing requirements under paragraph (a) or (b) of this section, the Director shall prepare a fact sheet under § 124.8 explaining the reasons for the action.			
40 CFR 144.17	40 CFR 144.17 Records. The Director or the Administrator may require, by written notice on a selective well-by-well basis, an owner or operator of an injection well to establish and maintain records, make reports, conduct monitoring, and provide other information as is deemed necessary to determine whether the owner or operator has acted or is acting in compliance with Part C of the SDWA or its implementing regulations.			
40 CFR 144.18	40 CFR 144.18 Requirements for Class VI wells. Owners or operators of Class VI wells must obtain a permit. Class VI wells cannot be authorized by rule to inject carbon dioxide.			
40 CFR 144.19(a)	40 CFR 144.19 Transitioning from Class II to Class VI. Owners or operators that are injecting carbon dioxide for the primary purpose of long- term storage into an oil and gas reservoir must apply for and obtain a Class VI geologic sequestration permit when there is an increased risk to USDWs compared to Class II operations. In determining if there is an increased risk to USDWs, the owner or operator must consider the factors specified in §144.19(b).			
40 CFR 144.19(b)	The Director shall determine when there is an increased risk to USDWs compared to Class II operations and a Class VI permit is required. In order to make this determination the Director must consider the following:			
40 CFR 144.19(b)(1)	Increase in reservoir pressure within the injection zone(s);			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 144.27 (a)	40 CFR 144.27 Requiring other information. For EPA administered programs only, in addition to the inventory requirements of § 144.26, the Regional Administrator may require the owner or operator of any well authorized by rule under this subpart to submit information as deemed necessary by the Regional Administrator to determine whether a well may be endangering an underground source of drinking water in violation of § 144.12 of this part.			
40 CFR 144.27 (b)(1)	Such information requirements may include, but are not limited to: (1) Performance of ground-water monitoring and the periodic submission of reports of such monitoring;			
40 CFR 144.27 (b)(2)	An analysis of injected fluids, including periodic submission of such analyses; and			
40 CFR 144.27 (b)(3)	A description of the geologic strata through and into which injection is taking place.			
40 CFR 144.27 (c)	Any request for information under this section shall be made in writing, and include a brief statement of the reasons for requiring the information. An owner or operator shall submit the information within the time period(s) provided in the notice.			
40 CFR 144.27 (d)	An owner or operator of an injection well authorized by rule under this subpart is prohibited from injecting into the well upon failure of the owner or operator to comply with a request for information within the time period(s) specified by the Director pursuant to paragraph (c) of this section. An owner or operator of a well prohibited from injection under this section shall not resume injection except under a permit issued pursuant to §§ 144.25, 144.31, 144.33 or 144.34.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.28 (b)(2)	Any noncompliance or malfunction of the injection system which may cause fluid migration into or between USDWs. Any information shall be provided orally within 24 hours from the time the owner or operator becomes aware of the circumstances. A written submission shall also be provided within five days of the time the owner or operator becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause, the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the noncompliance.			
40 CFR 144.28 (c)(1)	<i>Plugging and abandonment plan.</i> (1) The owner or operator shall prepare, maintain, and comply with a plan for plugging and abandonment of the well or project that meets the requirements of § 146.10 of this chapter and is acceptable to the Director. For purposes of this paragraph, temporary intermittent cessation of injection operations is not abandonment.			
40 CFR 144.28 (c)(2)	For EPA administered programs:			
40 CFR 144.28 (c)(2)(i)	The owner or operator shall submit the plan, on a form provided by the Regional Administrator, no later than one year after the effective date of the UIC program in the state.			
40 CFR 144.28 (c)(2)(ii)	The owner or operator shall submit any proposed significant revision to the method of plugging reflected in the plan no later than the notice of plugging required by § 144.28(j)(2) (i.e. , 45 days prior to plugging unless shorter notice is approved).			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Subpart D - Authorization By Permit				
40 CFR 144.31(a) (See also 145.11(a)(10))	40 CFR 144.31 Application for a permit; authorization by permit. Permit application. Unless an underground injection well is authorized by rule under subpart C of this part, all injection activities including construction of an injection well are prohibited until the owner or operator is authorized by permit. An owner or operator of a well currently authorized by rule must apply for a permit under this section unless well authorization by rule was for the life of the well or project. Authorization by rule for a well or project for which a permit application has been submitted terminates for the well or project upon the effective date of the permit. Procedures for applications, issuance and administration of emergency permits are found exclusively in § 144.34. A RCRA permit applying the standards of part 264, subpart C of this chapter will constitute a UIC permit for hazardous waste injection wells for which the technical standards in part 146 of this chapter are not generally appropriate.			
40 CFR 144.31(b) (See also 145.11(a)(10))	Who applies? When a facility or activity is owned by one person but is operated by another person, it is the operator’s duty to obtain a permit.			
40 CFR 144.31(c) (See also 145.11(a)(10))	Time to apply. Any person who performs or proposes an underground injection for which a permit is or will be required shall submit an application to the Director in accordance with the UIC program as follows:			
40 CFR 144.31(c)(1) (See also 145.11(a)(10))	For existing wells, as expeditiously as practicable and in accordance with the schedule in any program description under § 145.23(f), but no later than 4 years from the approval or promulgation of the UIC program.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt "optional" program elements such as authorization by rule.

40 CFR 144.34(b)(3) (See also 145.11(a)(13))	Any temporary permit under paragraph (a)(3) of this section shall be issued only after a complete permit application has been submitted and shall be effective until final action on the application.			
40 CFR 144.34(b)(4) (See also 145.11(a)(13))	Notice of any temporary permit under this paragraph shall be published in accordance with § 124.11 within 10 days of the issuance of the permit.			
40 CFR 144.34(b)(5) (See also 145.11(a)(13))	The temporary permit under this section may be either oral or written. If oral, it must be followed within 5 calendar days by a written temporary emergency permit.			
40 CFR 144.34(b)(6) (See also 145.11(a)(13))	The Director shall condition the temporary permit in any manner he or she determines is necessary to ensure that the injection will not result in the movement of fluids into an underground source of drinking water.			
40 CFR 144.35(a) (See also 145.11(a)(14))	40 CFR 144.35 Effect of a permit. Except for Class II and III wells, compliance with a permit during its term constitutes compliance, for purposes of enforcement, with Part C of the SDWA. However, a permit may be modified, revoked and reissued, or terminated during its term for cause as set forth in §§ 144.39 and 144.40.			
40 CFR 144.35(b) (See also 145.11(a)(14))	The issuance of a permit does not convey any property rights of any sort, or any exclusive privilege.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.35(c) (See also 145.11(a)(14))	The issuance of a permit does not authorize any injury to persons or property or invasion of other private rights, or any infringement of State or local law or regulations.			
40 CFR 144.36(a) (See also 145.11(a)(15))	40 CFR 144.36 Duration of permits. Permits for Class I and V wells shall be effective for a fixed term not to exceed 10 years. UIC permits for Class II and III wells shall be issued for a period up to the operating life of the facility. UIC permits for Class VI wells shall be issued for the operating life of the facility and the post-injection site care period. The Director shall review each issued Class II, III, and VI well UIC permit at least once every 5 years to determine whether it should be modified, revoked and reissued, terminated or a minor modification made as provided in §§144.39, 144.40, or 144.41.			
40 CFR 144.36(b) (See also 145.11(a)(15))	Except as provided in § 144.37, the term of a permit shall not be extended by modification beyond the maximum duration specified in this section.			
40 CFR 144.36(c) (See also 145.11(a)(15))	The Director may issue any permit for a duration that is less than the full allowable term under this section.			
40 CFR 144.37 (a)(1)	40 CFR 144.37 Continuation of expiring permits. <i>EPA permits.</i> When EPA is the permit-issuing authority, the conditions of an expired permit continue in force under 5 U.S.C. 558(c) until the effective date of a new permit if: (1) The permittee has submitted a timely application which is a complete application for a new permit; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 144.37 (a)(2)	The Regional Administrator, through no fault of the permittee does not issue a new permit with an effective date on or before the expiration date of the previous permit (for example, when issuance is impracticable due to time or resource constraints).			
40 CFR 144.37 (b)	<i>Effect.</i> Permits continued under this section remain fully effective and enforceable.			
40 CFR 144.37 (c)(1)	<i>Enforcement.</i> When the permittee is not in compliance with the conditions of the expiring or expired permit the Regional Administrator may choose to do any or all of the following: (1) Initiate enforcement action based upon the permit which has been continued;			
40 CFR 144.37 (c)(2)	Issue a notice of intent to deny the new permit. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;			
40 CFR 144.37 (c)(3)	Issue a new permit under part 124 with appropriate conditions; or			
40 CFR 144.37 (c)(4)	Take other actions authorized by these regulations.			
40 CFR 144.37 (d)	<i>State continuation.</i> An EPA issued permit does not continue in force beyond its time expiration date under Federal law if at that time a State is the permitting authority. A State authorized to administer the UIC program may continue either EPA or State-issued permits until the effective date of the new permits, if State law allows. Otherwise, the facility or activity is operating without a permit from the time of expiration of the old permit to the effective date of the State-issued new permit.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.38(a) (See also 145.11(a)(16))	40 CFR 144.38 Transfer of permits. Transfers by modification. Except as provided in paragraph (b) of this section, a permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or revoked and reissued (under § 144.39(b)(2)), or a minor modification made (under § 144.41(d)), to identify the new permittee and incorporate such other requirements as may be necessary under the Safe Drinking Water Act.			
40 CFR 144.38(b) (See also 145.11(a)(16))	Automatic transfers. As an alternative to transfers under paragraph (a) of this section, any UIC permit for a well not injecting hazardous waste or injecting carbon dioxide for geologic sequestration may be automatically transferred to a new permittee if:			
40 CFR 144.38(b)(1) (See also 145.11(a)(16))	The current permittee notifies the Director at least 30 days in advance of the proposed transfer date referred to in paragraph (b)(2) of this section;			
40 CFR 144.38(b)(2) (See also 145.11(a)(16))	The notice includes a written agreement between the existing and new permittees containing a specific date for transfer or permit responsibility, coverage, and liability between them, and the notice demonstrates that the financial responsibility requirements of § 144.52(a)(7) will be met by the new permittee; and			
40 CFR 144.38(b)(3) (See also 145.11(a)(16))	The Director does not notify the existing permittee and the proposed new permittee of his or her intent to modify or revoke and reissue the permit. A modification under this paragraph may also be a minor modification under § 144.41. If this notice is not received, the transfer is effective on the date specified in the agreement mentioned in paragraph (b)(2) of this section.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 144.39 (See also 145.11(a)(17))	40 CFR 144.39 Modification or revocation and reissuance of permits. When the Director receives any information (for example, inspects the facility, receives information submitted by the permittee as required in the permit (see § 144.51 of this chapter), receives a request for modification or revocation and reissuance under § 124.5, or conducts a review of the permit file) he or she may determine whether or not one or more of the causes listed in paragraphs (a) and (b) of this section for modification or revocation and reissuance or both exist. If cause exists, the Director may modify or revoke and reissue the permit accordingly, subject to the limitations of paragraph (c) of this section, and may request an updated application if necessary. When a permit is modified, only the conditions subject to modification are reopened. If a permit is revoked and reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term. See § 124.5(c)(2) of this chapter. If cause does not exist under this section or § 144.41 of this chapter, the Director shall not modify or revoke and reissue the permit. If a permit modification satisfies the criteria in § 144.41 for “minor modifications” the permit may be modified without a draft permit or public review. Otherwise, a draft permit must be prepared and other procedures in part 124 must be followed.			
40 CFR 144.39(a) (See also 145.11(a)(17))	Causes for modification. The following are causes for modification. For Class I hazardous waste injection wells, Class II, Class III or Class VI wells the following may be causes for revocation and reissuance as well as modification; and for all other wells the following may be cause for revocation or reissuance as well as modification when the permittee requests or agrees.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.41(f)	Change construction requirements approved by the Director pursuant to § 144.52(a)(1) (establishing UIC permit conditions), provided that any such alteration shall comply with the requirements of this part and part 146.			
40 CFR 144.41(g)	Amend a plugging and abandonment plan which has been updated under § 144.52(a)(6).			
40 CFR 144.41(h)	Amend a Class VI injection well testing and monitoring plan, plugging plan, post-injection site care and site closure plan, or emergency and remedial response plan where the modifications merely clarify or correct the plan, as determined by the Director.			
Subpart E - Permit Conditions				
40 CFR 144.51 (See also 145.11(a)(19))	40 CFR 144.51 Conditions applicable to all permits. The following conditions apply to all UIC permits. All conditions applicable to all permits shall be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations (or the corresponding approved State regulations) must be given in the permit.			
40 CFR 144.51(a) (See also 145.11(a)(19))	Duty to comply. The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Safe Drinking Water Act and is grounds for enforcement action; for permit termination, revocation and reissuance, or modification; or for denial of a permit renewal application; except that the permittee need not comply with the provisions of this permit to the extent and for the duration such noncompliance is authorized in an emergency permit under §144.34.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.51(b) (See also 145.11(a)(19))	Duty to reapply. If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit.			
40 CFR 144.51(c) (See also 145.11(a)(19))	Need to halt or reduce activity not a defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.			
40 CFR 144.51(d) (See also 145.11(a)(19))	Duty to mitigate. The permittee shall take all reasonable steps to minimize or correct any adverse impact on the environment resulting from noncompliance with this permit.			
40 CFR 144.51(e) (See also 145.11(a)(19))	Proper operation and maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit.			
40 CFR 144.51(f) (See also 145.11(a)(19))	Permit actions. This permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.55 (b)(2) (See also 145.11(a)(23))	New injection wells. No owner or operator of a new injection well may begin injection until all required corrective action has been taken.			
40 CFR 144.55 (b)(3) (See also 145.11(a)(23))	Injection pressure limitation. The Director may require as a permit condition that injection pressure be so limited that pressure in the injection zone does not exceed hydrostatic pressure at the site of any improperly completed or abandoned well within the area of review. This pressure limitation shall satisfy the corrective action requirement. Alternatively, such injection pressure limitation can be part of a compliance schedule and last until all other required corrective action has been taken.			
40 CFR 144.55 (b)(4) (See also 145.11(a)(23))	Class III wells only. When setting corrective action requirements the Director shall consider the overall effect of the project on the hydraulic gradient in potentially affected USDWs, and the corresponding changes in potentiometric surface(s) and flow direction(s) rather than the discrete effect of each well. If a decision is made that corrective action is not necessary based on the determinations above, the monitoring program required in § 146.33(b) shall be designed to verify the validity of such determinations..			
Subpart F - Financial Responsibility: Class I Hazardous Wells				

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.60	40 CFR 144.60 Applicability. The requirements of §§ 144.62, 144.63, and 144.70 apply to owners and operators of all existing and new Class I Hazardous waste injection wells, except as provided otherwise in this section.			
40 CFR 144.61(a)	40 CFR 144.61 Definitions of terms as used in this subpart. <i>Plugging and abandonment plan</i> means the plan for plugging and abandonment prepared in accordance with the requirements of §§ 144.28 and 144.51.			
40 CFR 144.61(b)	<i>Current plugging</i> cost estimate means the most recent of the estimates prepared in accordance with § 144.62 (a), (b) and (c).			
40 CFR 144.61(c)	<i>Parent corporation</i> means a corporation which directly owns at least 50 percent of the voting stock of the corporation which is the injection well owner or operator; the latter corporation is deemed a subsidiary of the parent corporation.			
40 CFR 144.61(d)	The following terms are used in the specifications for the financial test for plugging and abandonment. The definitions are intended to represent the common meanings of the terms as they are generally used by the business community. Assets means all existing and all probable future economic benefits obtained or controlled by a particular entity.			
40 CFR 144.61(d)	Current assets means cash or other assets or resources commonly identified as those which are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.61(d)	Current liabilities means obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities.			
40 CFR 144.61(d)	Independently audited refers to an audit performed by an independent certified public accountant in accordance with generally accepted auditing standards.			
40 CFR 144.61(d)	Liabilities means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.			
40 CFR 144.61(d)	Net working capital means current assets minus current liabilities.			
40 CFR 144.61(d)	Net worth means total assets minus total liabilities and is equivalent to owner's equity.			
40 CFR 144.61(d)	Tangible net worth means the tangible assets that remain after deducting liabilities; such assets would not include intangibles such as goodwill and rights to patents or royalties.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.62(a)*	40 CFR 144.62 Cost estimate for plugging and abandonment. The owner or operator must prepare a written estimate, in current dollars, of the cost of plugging the injection well in accordance with the plugging and abandonment plan as specified in §§ 144.28 and 144.51. The plugging and abandonment cost estimate must equal the cost of plugging and abandonment at the point in the facility's operating life when the extent and manner of its operation would making plugging and abandonment the most expensive, as indicated by its plugging and abandonment plan.			
40 CFR 144.62(b)*	The owner or operator must adjust the plugging and abandonment cost estimate for inflation within 30 days after each anniversary of the date on which the first plugging and abandonment cost estimate was prepared. The adjustment must be made as specified in paragraphs (b) (1) and (2) of this section, using an inflation factor derived from the annual Oil and Gas Field Equipment Cost Index. The inflation factor is the result of dividing the latest published annual Index by the Index for the previous year.			
40 CFR 144.62 (b)(1)*	The first adjustment is made by multiplying the plugging and abandonment cost estimate by the inflation factor, resulting in the adjusted cost estimate.			
40 CFR 144.62 (b)(2)*	Subsequent adjustments are made by multiplying the latest adjusted cost estimate by the latest inflation factor.			
40 CFR 144.62(c)*	The owner or operator must revise the plugging and abandonment cost estimate whenever a change in the plugging and abandonment plan increases the cost of plugging and abandonment. The revised plugging and abandonment cost estimate must be adjusted for inflation as specified in § 144.62(b).			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.62(d)*	The owner or operator must keep the following at the facility during the operating life of the facility: the latest plugging and abandonment cost estimate prepared in accordance with § 144.62 (a) and (c) and, when this estimate has been adjusted in accordance with § 144.62(b), the latest adjusted plugging and abandonment cost estimate.			
40 CFR 144.63 (a)-(f)*	<p>40 CFR 144.63 Financial assurance for plugging and abandonment.</p> <p>An owner or operator of each facility must establish financial assurance for the plugging and abandonment of each existing and new Class I hazardous waste injection well. He must choose from the options as specified in paragraphs (a) through (f) of this section.</p> <p>Plugging and abandonment trust fund. Surety bond guaranteeing payment into a plugging and abandonment trust fund Surety bond guaranteeing performance of plugging and abandonment Plugging and abandonment letter of credit Plugging and abandonment insurance Financial test and corporate guarantee for plugging and abandonment</p>			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current	Statutes and Regulations	Difference
Citation	Summary	Citation	Summary	
40 CFR 144.63(g)*	Use of multiple financial mechanisms. An owner or operator may satisfy the requirements of this section by establishing more than one financial mechanism per injection well. These mechanisms are limited to trust funds, surety bonds, guaranteeing payment into a trust fund, letters of credit, and insurance. The mechanisms must be as specified in paragraphs (a), (b), (d), and (e), respectively, of this section, except that it is the combination of mechanisms, rather than the single mechanism, which must provide financial assurance for an amount at least equal to the adjusted plugging and abandonment cost. If an owner or operator uses a trust fund in combination with a surety bond or letter of credit, he may use that trust fund as the standby trust fund for the other mechanisms. A single standby trust may be established for two or more mechanisms. The Regional Administrator may invoke any or all of the mechanisms to provide for plugging and abandonment of the injection well.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.63(h)*	Use of a financial mechanism for multiple facilities. An owner or operator may use a financial assurance mechanism specified in this section to meet the requirements of this section for more than one injection well. Evidence of financial assurance submitted to the Regional Administrator must include a list showing, for each injection well, the EPA Identification Number, name, address, and the amount of funds for plugging and abandonment assured by the mechanism. If the injection wells covered by the mechanism are in more than one Region, identical evidence of financial assurance must be submitted to and maintained with the Regional Administrators of all such Regions. The amount of funds available through the mechanism must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for each injection well. In directing funds available through the mechanism for plugging and abandonment of any of the injection wells covered by the mechanism, the Regional Administrator may direct only the amount of funds designated for that injection well, unless the owner or operator agrees to use additional funds available under the mechanism.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.63(i)*	Release of the owner or operator from the requirements of this section. Within 60 days after receiving certifications from the owner or operator and an independent registered professional engineer that plugging and abandonment has been accomplished in accordance with the plugging and abandonment plan, the Regional Administrator will notify the owner or operator in writing that he is no longer required by this section to maintain financial assurance for plugging and abandonment of the injection well, unless the Regional Administrator has reason to believe that plugging and abandonment has not been in accordance with the plugging and abandonment plan.			
40 CFR 144.64(a)*	40 CFR 144.64 Incapacity of owners or operators, guarantors, or financial institutions. An owner or operator must notify the Regional Administrator by certified mail of the commencement of a voluntary or involuntary proceeding under title 11 (Bankruptcy), U.S. Code, naming the owner or operator as debtor, within 10 business days after the commencement of the proceeding. A guarantor of a corporate guarantee as specified in § 144.63(f) must make such a notification if he is named as debtor, as required under the terms of the guarantee (§ 144.70(f)).			
40 CFR 144.64(b)*	An owner or operator who fulfills the requirements of § 144.63 by obtaining a letter of credit, surety bond, or insurance policy will be deemed to be without the required financial assurance or liability coverage in the event of bankruptcy, insolvency, or a suspension or revocation of the license or charter of the issuing institution. The owner or operator must establish other financial assurance or liability coverage within 60 days after such an event.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Subpart G—Requirements for Owners and Operators of Class V Injection Wells				
40 CFR 144.79	<p>40 CFR 144.79 General.</p> <p>This subpart tells you what requirements apply if you own or operate a Class V injection well. You may also be required to follow additional requirements listed in the rest of this part. Where they may apply, these other requirements are referenced rather than repeated. The requirements described in this subpart and elsewhere in this part are to protect underground sources of drinking water and are part of the Underground Injection Control (UIC) Program established under the Safe Drinking Water Act. This subpart is written in a special format to make it easier to understand the regulatory requirements. Like other EPA regulations, it establishes enforceable legal requirements.</p>			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.80(a)(1)*	40 CFR 144.80 What is a Class V injection well? As described in § 144.6, injection wells are classified as follows: Class I. (1) Wells used by generators of hazardous waste or owners or operators of hazardous waste management facilities to inject hazardous waste beneath the lowermost formation containing, within one-quarter mile of the well bore, an underground source of drinking water.			
40 CFR 144.80(a)(2)*	Other industrial and municipal disposal wells which inject fluids beneath the lowermost formation containing, within one quarter mile of the well bore, an underground source of drinking water;			
40 CFR 144.80(a)(3)*	Radioactive waste disposal wells which inject fluids below the lowermost formation containing an underground source of drinking water within one quarter mile of the well bore.			
40 CFR 144.80(b)(1)*	Class II. Wells which inject fluids: (1) Which are brought to the surface in connection with natural gas storage operations, or conventional oil or natural gas production and may be commingled with waste waters from gas plants which are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection.			
40 CFR 144.80(b)(2)*	For enhanced recovery of oil or natural gas; and			
40 CFR 144.80(b)(3)*	For storage of hydrocarbons which are liquid at standard temperature and pressure.			
40 CFR 144.80(c)*	Class III. Wells which inject fluids for extraction of minerals including:			
40 CFR 144.80(c)(1)*	Mining of sulfur by the Frasch process;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Citation	Summary	Citation	Summary	
40 CFR 144.80(c)(2)*	In situ production of uranium or other metals; this category includes only in situ production from ore bodies which have not been conventionally mined. Solution mining of conventional mines such as stopes leaching is included in Class V.			
40 CFR 144.80(c)(3)*	Solution mining of salts or potash.			
40 CFR 144.80(d)(1)*	Class IV. (1) Wells used by generators of hazardous waste or of radioactive waste, by owners and operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste into a formation which within one quarter (1/4) mile of the well contains an underground source of drinking water.			
40 CFR 144.80(d)(2)*	Wells used by generators of hazardous waste or of radioactive waste, by owners and operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste above a formation which within one quarter (1/4) mile of the well contains an underground source of drinking water.			
40 CFR 144.80(d)(3)*	Wells used by generators of hazardous waste or owners or operators of hazardous waste management facilities to dispose of hazardous waste, which cannot be classified under paragraph (a)(1) or (d)(1) and (2) of this section (e.g., wells used to dispose of hazardous waste into or above a formation which contains an aquifer which has been exempted pursuant to 40 CFR 146.04).			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.80(e)*	Class V. Injection wells not included in Class I, II, III, IV or VI. Typically, Class V wells are shallow wells used to place a variety of fluids directly below the land surface. However, if the fluids you place in the ground qualify as a hazardous waste under the Resource Conservation and Recovery Act (RCRA), your well is either a Class I or Class IV well, not a Class V well. Examples of Class V wells are described in § 144.81.			
40 CFR 144.80(f)*	Class VI. Wells used for geologic sequestration of carbon dioxide beneath the lowermost formation containing a USDW, except those wells that are experimental in nature; or, wells used for geologic sequestration of carbon dioxide that have been granted a waiver of the injection depth requirements pursuant to requirements at § 146.95 of this chapter; or, wells used for geologic sequestration of carbon dioxide that have received an expansion to the areal extent of a existing Class II enhanced oil recovery or enhanced gas recovery aquifer exemption pursuant to § 146.4 of this chapter and § 144.7(d).			
40 CFR 144.81*	40 CFR 144.81 Does this subpart apply to me? This subpart applies to you if you own or operate a Class V well, for example:			
40 CFR 144.81(1)*	Air conditioning return flow wells used to return to the supply aquifer the water used for heating or cooling in a heat pump;			
40 CFR 144.81(2)*	Large capacity cesspools including multiple dwelling, community or regional cesspools, or other devices that receive sanitary wastes, containing human excreta, which have an open bottom and sometimes perforated sides. The UIC requirements do not apply to single family residential cesspools nor to non-residential cesspools which receive solely sanitary waste and have the capacity to serve fewer than 20 persons a day.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 144.81(3)*	Cooling water return flow wells used to inject water previously used for cooling;			
40 CFR 144.81(4)*	Drainage wells used to drain surface fluids, primarily storm runoff, into a subsurface formation;			
40 CFR 144.81(5)*	Dry wells used for the injection of wastes into a subsurface formation;			
40 CFR 144.81(6)*	Recharge wells used to replenish the water in an aquifer;			
40 CFR 144.81(7)*	Salt water intrusion barrier wells used to inject water into a fresh aquifer to prevent the intrusion of salt water into the fresh water;			
40 CFR 144.81(8)*	Sand backfill and other backfill wells used to inject a mixture of water and sand, mill tailings or other solids into mined out portions of subsurface mines whether what is injected is a radioactive waste or not.			
40 CFR 144.81(9)*	Septic system wells used to inject the waste or effluent from a multiple dwelling, business establishment, community or regional business establishment septic tank. The UIC requirements do not apply to single family residential septic system wells, nor to non-residential septic system wells which are used solely for the disposal of sanitary waste and have the capacity to serve fewer than 20 persons a day.			
40 CFR 144.81(10)*	Subsidence control wells (not used for the purpose of oil or natural gas production) used to inject fluids into a non-oil or gas producing zone to reduce or eliminate subsidence associated with the overdraft of fresh water;			
40 CFR 144.81(11)*	Injection wells associated with the recovery of geothermal energy for heating, aquaculture and production of electric power;			
40 CFR 144.81(12)*	Wells used for solution mining of conventional mines such as stopes leaching;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.81(13)*	Wells used to inject spent brine into the same formation from which it was withdrawn after extraction of halogens or their salts;			
40 CFR 144.81(14)*	Injection wells used in experimental technologies.			
40 CFR 144.81(15)*	Injection wells used for in situ recovery of lignite, coal, tar sands, and oil shale.			
40 CFR 144.81(16)*	Motor vehicle waste disposal wells that receive or have received fluids from vehicular repair or maintenance activities, such as an auto body repair shop, automotive repair shop, new and used car dealership, specialty repair shop (e.g., transmission and muffler repair shop), or any facility that does any vehicular repair work. Fluids disposed in these wells may contain organic and inorganic chemicals in concentrations that exceed the maximum contaminant levels (MCLs) established by the primary drinking water regulations (see 40 CFR part 141). These fluids also may include waste petroleum products and may contain contaminants, such as heavy metals and volatile organic compounds, which pose risks to human health.			
40 CFR 144.82*	<p>40 CFR 144.82 What must I do to protect underground sources of drinking water?</p> <p>f you own or operate any type of Class V well, the regulations below require that you cannot allow movement of fluid into USDWs that might cause endangerment, you must comply with other Federal UIC requirements in 40 CFR parts 144 through 147, and you must comply with any other measures required by your State or EPA Regional Office UIC Program to protect USDWs, and you must properly close your well when you are through using it. You also must submit basic information about your well, as described in § 144.83.</p>			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.82(a)(1)*	Prohibition of fluid movement. (1) As described in § 144.12(a), your injection activity cannot allow the movement of fluid containing any contaminant into USDWs, if the presence of that contaminant may cause a violation of the primary drinking water standards under 40 CFR part 141, other health based standards, or may otherwise adversely affect the health of persons. This prohibition applies to your well construction, operation, maintenance, conversion, plugging, closure, or any other injection activity.			
40 CFR 144.82(a)(2)*	If the Director of the UIC Program in your State or EPA Region learns that your injection activity may endanger USDWs, he or she may require you to close your well, require you to get a permit, or require other actions listed in § 144.12(c), (d), or (e).			
40 CFR 144.82(b)*	Closure requirements. You must close the well in a manner that complies with the above prohibition of fluid movement. Also, you must dispose or otherwise manage any soil, gravel, sludge, liquids, or other materials removed from or adjacent to your well in accordance with all applicable Federal, State, and local regulations and requirements.			
40 CFR 144.82(c)*	Other requirements in Parts 144 through 147. Beyond this subpart, you are subject to other UIC Program requirements in 40 CFR parts 144 through 147. While most of the relevant requirements are repeated or referenced in this subpart for convenience, you need to read these other parts to understand the entire UIC Program.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	Difference
40 CFR 144.82(d)*	Other State or EPA requirements. 40 CFR parts 144 through 147 define minimum Federal UIC requirements. EPA Regional Offices administering the UIC Program have the flexibility to establish additional or more stringent requirements based on the authorities in parts 144 through 147, if believed to be necessary to protect USDWs. States can have their own authorities to establish additional or more stringent requirements if needed to protect USDWs. You must comply with these additional requirements, if any exist in your area. Contact the UIC Program Director in your State or EPA Region to learn more.			
40 CFR 144.83*	40 CFR 144.83 Do I need to notify anyone about my Class V injection well? Yes, you need to provide basic “inventory information” about your well to the UIC Director, if you haven't already. You also need to provide any additional information that your UIC Program Director requests in accordance with the provisions of the UIC regulations.			
40 CFR 144.83(a)*	Inventory requirements. Unless you know you have already satisfied the inventory requirements in § 144.26 that were in effect prior to the issuance of this Subpart G, you must give your UIC Program Director certain information about yourself and your injection operation. Note: This information is requested on national form “Inventory of Injection Wells,” OMB No. 2040-0042.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.86(b)	Complete Local Source Water Assessment for Ground Water Protection Areas. When EPA has approved a State's Drinking Water Source Assessment and Protection Program, States will begin to conduct local assessments for each public water system in their State. For the purposes of this rule, local assessments for community water systems and non-transient non-community systems are complete when four requirements are met: First, a State must delineate the boundaries of the assessment area for community and non-transient non-community water systems. Second, the State must identify significant potential sources of contamination in these delineated areas. Third, the State must “determine the susceptibility of community and non-transient non-community water systems in the delineated area to such contaminants.” Lastly, each State will develop its own plan for making the completed assessments available to the public.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.86(c)	Ground Water Protection Area. A ground water protection area is a geographic area near and/or surrounding community and non-transient non-community water systems that use ground water as a source of drinking water. These areas receive priority for the protection of drinking water supplies and States are required to delineate and assess these areas under section 1453 of the Safe Drinking Water Act. The additional requirements in § 144.88 apply to you if your Class V motor vehicle waste disposal well is in a ground water protection area for either a community water system or a non-transient non-community water system, in many States, these areas will be the same as Wellhead Protection Areas that have been or will be delineated as defined in section 1428 of the SDWA.			
40 CFR 144.86(d)	Community Water System. A community water system is a public water system that serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.			
40 CFR 144.86(e)	Non-Transient Non-Community Water System. A public water system that is not a community water system and that regularly serves at least 25 of the same people over six months a year. These may include systems that provide water to schools, day care centers, government/military installations, manufacturers, hospitals or nursing homes, office buildings, and other facilities.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 144.87(d)*	How to find out if your well is in a ground water protection area or sensitive ground water area. States are required to make their local source water assessments widely available to the public through a variety of methods after the assessments are complete. You can find out if your Class V well is in a ground water protection area by contacting the State agency responsible for the State Drinking Water Source Assessment and Protection Program in your area. You may call the Safe Drinking Water Hotline at 1-800-426-4791 to find out who to call in your State for this information. The State office responsible for implementing the Drinking Water Source Assessment and Protection Program makes the final and official determination of boundaries for ground water protection areas. Because States that choose to delineate other sensitive ground water areas are also required to make the information on these areas accessible to the public, they may do so in a manner similar to the process used by the States in publicizing the EPA approved Drinking Water Source Assessment and Protection Program. You can find out if your Class V well is in an other sensitive ground water area by contacting the State or Federal agency responsible for the Underground Injection Control Program. You may call the Safe Drinking Water Hotline at 1-800-426-4791 to find out who to call for information.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.87(e)*	Changes in the status of the EPA approved state drinking water source assessment and protection program. After January 1, 2004 your State may assess a ground water protection area for ground water supplying a new community water system or a new non-transient non-community water system that includes your Class V injection well. Also, your State may officially re-delineate the boundaries of a previously delineated ground water protection area to include additional areas that includes your motor vehicle waste disposal well. This would make the additional regulations apply to you if your motor vehicle waste disposal well is in such an area. The additional regulations start applying to you one year after the State completes the local assessment for the ground water protection area for the new drinking water system or the new re-delineated area. The UIC Program Director responsible for your area may extend this deadline for up to one year if the most efficient compliance option for the well is connection to a sanitary sewer or installation of new treatment technology.			
40 CFR 144.87(f)*	What happens if my state doesn't designate other sensitive ground water areas? If your State or EPA Region elects not to delineate the additional sensitive ground water areas, the additional regulations apply to you regardless of the location of your well by January 1, 2007, or January 2008 if an extension has been granted as explained in paragraph (c) of this section, except for wells in ground water protection areas which are subject to different compliance deadlines explained in paragraph (b) of this section.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 144.87(h)*	Application of requirements outside of ground water protection areas and sensitive ground water areas. EPA expects and strongly encourages States to use existing authorities in the UIC program to take whatever measures are needed to ensure Class V wells are not endangering USDWs in any other areas outside of delineated ground water protection areas and sensitive ground water areas. Such measures could include, if believed to be necessary by a UIC Program Director, applying the additional requirements below to other areas and/or other types of Class V wells. Therefore, the Director may apply the additional requirements to you, even if you are not located in the areas listed in paragraph (a) of this section.			
40 CFR 144.88 (See also 145.11(a)(32))	The additional requirements are specified in the following tables:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current	Statutes and Regulations	Difference
Citation	Summary	Citation	Summary	
40 CFR 144.89(a)(1)*	Closure. (1) Prior to closing a Class V large-capacity cesspool or motor vehicle waste disposal well, you must plug or otherwise close the well in a manner that complies with the prohibition of fluid movement standard in § 144.12 and summarized in § 144.82(a). If the UIC Program Director in your State or EPA Region has any additional or more specific closure standards, you have to meet those standards too. You also must dispose or otherwise manage any soil, gravel, sludge, liquids, or other materials removed from or adjacent to your well in accordance with all applicable Federal, State, and local regulations and requirements, as in § 144.82(b).			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 144.89(a)(2)*	(2) Closure does not mean that you need to cease operations at your facility, only that you need to close your well. A number of alternatives are available for disposing of waste fluids. Examples of alternatives that may be available to motor vehicle stations include: recycling and reusing wastewater as much as possible; collecting and recycling petroleum-based fluids, coolants, and battery acids drained from vehicles; washing parts in a self-contained, recirculating solvent sink, with spent solvents being recovered and replaced by the supplier; using absorbents to clean up minor leaks and spills, and placing the used materials in approved waste containers and disposing of them properly; using a wet vacuum or mop to pick up accumulated rain or snow melt, and if allowed, connecting floor drains to a municipal sewer system or holding tank, and if allowed, disposing of the holding tank contents through a publicly owned treatment works. You should check with the publicly owned treatment works you might use to see if they would accept your wastes. Alternatives that may be available to owners and operators of a large-capacity cesspool include: conversion to a septic system; connection to sewer; and installation of an on-site treatment unit.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current	Statutes and Regulations	Difference
Citation	Summary	Citation	Summary	
40 CFR 144.89(b)*	Conversions. In limited cases, the UIC Director may authorize the conversion (reclassification) of a motor vehicle waste disposal well to another type of Class V well. Motor vehicle wells may only be converted if: all motor vehicle fluids are segregated by physical barriers and are not allowed to enter the well; and, injection of motor vehicle waste is unlikely based on a facility's compliance history and records showing proper waste disposal. The use of a semi-permanent plug as the means to segregate waste is not sufficient to convert a motor vehicle waste disposal well to another type of Class V well.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146 – Underground Injection Control Program: Criteria and Standards					
Subpart A – General Provisions					
40 CFR 146.1(a)	40 CFR 146.1 Applicability and scope. This part sets forth technical criteria and standards for the Underground Injection Control Program. This part should be read in conjunction with 40 CFR parts 124, 144, and 145, which also apply to UIC programs. 40 CFR part 144 defines the regulatory framework of EPA administered permit programs. 40 CFR part 145 describes the elements of an approvable State program and procedures for EPA approval of State participation in the permit programs. 40 CFR part 124 describes the procedures the Agency will use for issuing permits under the covered programs. Certain of these procedures will also apply to State-administered programs as specified in 40 CFR part 145.				
40 CFR 146.1(b)	Upon the approval, partial approval or promulgation of a State UIC program by the Administrator, any underground injection which is not authorized by the Director by rule or by permit is unlawful.				
40 CFR 146.2	40 CFR 146.2 Law authorizing these regulations. The Safe Drinking Water Act, 42 U.S.C. 300f et seq. authorizes these regulations and all other UIC program regulations referenced in 40 CFR part 144. Certain regulations relating to the injection of hazardous waste are also authorized by the Resource Conservation and Recovery Act, 42 U.S.C. 6901 et seq.				
40 CFR 146.3	40 CFR 146.3 Definitions <i>Abandoned well</i> means a well whose use has been permanently discontinued or which is in a state of disrepair such that it cannot be used for its intended purpose or for observation purposes.				

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
	<i>Casing</i> means a pipe or tubing of appropriate material, of varying diameter and weight, lowered into a borehole during or after drilling in order to support the sides of the hole and thus prevent the walls from caving, to prevent loss of drilling mud into porous ground, or to prevent water, gas, or other fluid from entering or leaving the hole.			
	<i>Catastrophic collapse</i> means the sudden and utter failure of overlying “strata” caused by removal of underlying materials.			
	<i>Cementing</i> means the operation whereby a cement slurry is pumped into a drilled hole and/or forced behind the casing.			
	<i>Confining bed</i> means a body of impermeable or distinctly less permeable material stratigraphically adjacent to one or more aquifers.			
	<i>Confining zone</i> means a geological formation, group of formations, or part of a formation that is capable of limiting fluid movement above an injection zone.			
	<i>Conventional mine</i> means an open pit or underground excavation for the production of minerals.			
	<i>Disposal well</i> means a well used for the disposal of waste into a subsurface stratum.			
	<i>Effective date</i> of a UIC program means the date that a State UIC program is approved or established by the Administrator.			
	<i>Experimental technology</i> means a technology which has not been proven feasible under the conditions in which it is being tested.			
	<i>Fault</i> means a surface or zone of rock fracture along which there has been displacement.			
	<i>Flow rate</i> means the volume per time unit given to the flow of gases or other fluid substance which emerges from an orifice, pump, turbine or passes along a conduit or channel.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
	<i>Lithology</i> means the description of rocks on the basis of their physical and chemical characteristics.			
	<i>Packer</i> means a device lowered into a well to produce a fluid-tight seal.			
	<i>Plugging record</i> means a systematic listing of permanent or temporary abandonment of water, oil, gas, test, exploration and waste injection wells, and may contain a well log, description of amounts and types of plugging material used, the method employed for plugging, a description of formations which are sealed and a graphic log of the well showing formation location, formation thickness, and location of plugging structures.			
	<i>Pressure</i> means the total load or force per unit area acting on a surface.			
	<i>Sole or principal source aquifer</i> means an aquifer which has been designated by the Administrator pursuant to section 1424 (a) or (e) of the SDWA.			
	<i>Subsidence</i> means the lowering of the natural land surface in response to: Earth movements; lowering of fluid pressure; removal of underlying supporting material by mining or solution of solids, either artificially or from natural causes; compaction due to wetting (Hydrocompaction); oxidation of organic matter in soils; or added load on the land surface.			
	<i>Surface casing</i> means the first string of well casing to be installed in the well.			
	<i>Well plug</i> means a watertight and gastight seal installed in a borehole or well to prevent movement of fluids.			
	<i>Well stimulation</i> means several processes used to clean the well bore, enlarge channels, and increase pore space in the interval to be injected thus making it possible for wastewater to move more readily into the formation, and includes (1) surging, (2) jetting, (3) blasting, (4) acidizing, (5) hydraulic fracturing.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

	<i>Well monitoring</i> means the measurement by on-site instruments or laboratory methods, of the quality of water in a well			
40 CFR 146.4	40 CFR 146.4 Criteria for exempted aquifers. An aquifer or a portion thereof which meets the criteria for an “underground source of drinking water” in §146.3 may be determined under §144.7 of this chapter to be an “exempted aquifer” for Class I–V wells if it meets the criteria in paragraphs (a) through (c) of this section. Class VI wells must meet the criteria under paragraph (d) of this section:			
40 CFR 146.4(a)	It does not currently serve as a source of drinking water; and			
40 CFR 146.4(b)	It cannot now and will not in the future serve as a source of drinking water because:			
40 CFR 146.4(b)(1)	It is mineral, hydrocarbon or geothermal energy producing, or can be demonstrated by a permit applicant as part of a permit application for a Class II or III operation to contain minerals or hydrocarbons that considering their quantity and location are expected to be commercially producible.			
40 CFR 146.4(b)(2)	It is situated at a depth or location which makes recovery of water for drinking water purposes economically or technologically impractical;			
40 CFR 146.4(b)(3)	It is so contaminated that it would be economically or technologically impractical to render that water fit for human consumption; or			
40 CFR 146.4(b)(4)	It is located over a Class III well mining area subject to subsidence or catastrophic collapse; or			
40 CFR 146.4(c)	The total dissolved solids content of the ground water is more than 3,000 and less than 10,000 mg/l and it is not reasonably expected to supply a public water system.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	Difference
40 CFR 146.4(d)	The areal extent of an aquifer exemption for a Class II enhanced oil recovery or enhanced gas recovery well may be expanded for the exclusive purpose of Class VI injection for geologic sequestration under §144.7(d) of this chapter if it meets the following criteria:			
40 CFR 146.4(d)(1)	It does not currently serve as a source of drinking water; and			
40 CFR 146.4(d)(2)	The total dissolved solids content of the ground water is more than 3,000 mg/l and less than 10,000 mg/l; and			
40 CFR 146.4(d)(3)	It is not reasonably expected to supply a public water system.			
40 CFR 146.5	40 CFR 146.5 Classification of injection wells. Injection wells are classified as follows:			
40 CFR 146.5(a)(1)	Class I. (1) Wells used by generators of hazardous waste or owners or operators of hazardous waste management facilities to inject hazardous waste beneath the lowermost formation containing, within one quarter (1/4) mile of the well bore, an underground source of drinking water.			
40 CFR 146.5(a)(2)	Other industrial and municipal disposal wells which inject fluids beneath the lowermost formation containing, within one quarter mile of the well bore, an underground source of drinking water.			
40 CFR 146.5(a)(3)	Radioactive waste disposal wells which inject fluids below the lowermost formation containing an underground source of drinking water within one quarter mile of the well bore.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.5(b)(1)	Class II. Wells which inject fluids: (1) Which are brought to the surface in connection with conventional oil or natural gas production and may be commingled with waste waters from gas plants which are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection.			
40 CFR 146.5(b)(2)	For enhanced recovery of oil or natural gas; and			
40 CFR 146.5(b)(3)	For storage of hydrocarbons which are liquid at standard temperature and pressure.			
40 CFR 146.5(c)	Class III. Wells which inject for extraction of minerals including:			
40 CFR 146.5(c)(1)	Mining of sulfur by the Frasch process;			
40 CFR 146.5(c)(2)	In situ production of uranium or other metals. This category includes only in-situ production from ore bodies which have not been conventionally mined. Solution mining of conventional mines such as stopes leaching is included in Class V.			
40 CFR 146.5(c)(3)	Solution mining of salts or potash.			
40 CFR 146.5(d)(1)	Class IV. (1) Wells used by generators of hazardous waste or of radioactive waste, by owners or operators of hazardous waste management facilities, or by owners or operators of radioactive waste disposal sites to dispose of hazardous waste or radioactive waste into a formation which within one quarter (1/4) mile of the well contains an underground source of drinking water.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.7	40 CFR 146.7 Corrective action. In determining the adequacy of corrective action proposed by the applicant under 40 CFR 144.55 and in determining the additional steps needed to prevent fluid movement into underground sources of drinking water, the following criteria and factors shall be considered by the Director:			
40 CFR 146.7(a)	Nature and volume of injected fluid;			
40 CFR 146.7(b)	Nature of native fluids or by-products of injection;			
40 CFR 146.7(c)	Potentially affected population;			
40 CFR 146.7(d)	Geology;			
40 CFR 146.7(e)	Hydrology;			
40 CFR 146.7(f)	History of the injection operation;			
40 CFR 146.7(g)	Completion and plugging records;			
40 CFR 146.7(h)	Abandonment procedures in effect at the time the well was abandoned; and			
40 CFR 146.7(i)	Hydraulic connections with underground sources of drinking water.			
40 CFR 146.8(a)	40 CFR 146.8 Mechanical integrity. An injection well has mechanical integrity if:			
40 CFR 146.8(a)(1)	There is no significant leak in the casing, tubing or packer; and			
40 CFR 146.8(a)(2)	There is no significant fluid movement into an underground source of drinking water through vertical channels adjacent to the injection well bore.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.8(c)(2)	For Class II only, cementing records demonstrating the presence of adequate cement to prevent such migration; or			
40 CFR 146.8(c)(3)	For Class III wells where the nature of the casing precludes the use of the logging techniques prescribed at paragraph (c)(1) of this section, cementing records demonstrating the presence of adequate cement to prevent such migration;			
40 CFR 146.8(c)(4)	For Class III wells where the Director elects to rely on cementing records to demonstrate the absence of significant fluid movement, the monitoring program prescribed by § 146.33(b) shall be designed to verify the absence of significant fluid movement.			
40 CFR 146.8(d)	The Director may allow the use of a test to demonstrate mechanical integrity other than those listed in paragraphs (b) and (c)(2) of this section with the written approval of the Administrator. To obtain approval, the Director shall submit a written request to the Administrator, which shall set forth the proposed test and all technical data supporting its use. The Administrator shall approve the request if it will reliably demonstrate the mechanical integrity of wells for which its use is proposed. Any alternate method approved by the Administrator shall be published in the Federal Register and may be used in all States unless its use is restricted at the time of approval by the Administrator.			
40 CFR 146.8(e)	In conducting and evaluating the tests enumerated in this section or others to be allowed by the Director, the owner or operator and the Director shall apply methods and standards generally accepted in the industry. When the owner or operator reports the results of mechanical integrity tests to the Director, he shall include a description of the test(s) and the method(s) used. In making his/her evaluation, the Director shall review monitoring and other test data submitted since the previous evaluation.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.8(f)	The Director may require additional or alternative tests if the results presented by the owner or operator under § 146.8(e) are not satisfactory to the Director to demonstrate that there is no movement of fluid into or between USDWs resulting from the injection activity.			
40 CFR 146.9	40 CFR 146.9 Criteria for establishing permitting priorities. In determining priorities for setting times for owners or operators to submit applications for authorization to inject under the procedures of § 144.31 (a), (c), (g) or § 144.22(f), the Director shall base these priorities upon consideration of the following factors:			
40 CFR 146.9(a)	Injection wells known or suspected to be contaminating underground sources of drinking water;			
40 CFR 146.9(b)	Injection wells known to be injecting fluids containing hazardous contaminants;			
40 CFR 146.9(c)	Likelihood of contamination of underground sources of drinking water;			
40 CFR 146.9(d)	Potentially affected population;			
40 CFR 146.9(e)	Injection wells violating existing State requirements;			
40 CFR 146.9(f)	Coordination with the issuance of permits required by other State or Federal permit programs;			
40 CFR 146.9(g)	Age and depth of the injection well; and			
40 CFR 146.9(h)	Expiration dates of existing State permits, if any.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 146.10 (a)(1)	40 CFR 146.10 Plugging and abandoning Class I-III wells. Requirements for Class I, II and III wells. (1) Prior to abandoning Class I, II and III wells, the well shall be plugged with cement in a manner which will not allow the movement of fluids either into or between underground sources of drinking water. The Director may allow Class III wells to use other plugging materials if the Director is satisfied that such materials will prevent movement of fluids into or between underground sources of drinking water.			
40 CFR 146.10 (a)(2)	Placement of the cement plugs shall be accomplished by one of the following:			
40 CFR 146.10 (a)(2)(i)	The Balance method;			
40 CFR 146.10 (a)(2)(ii)	The Dump Bailer method;			
40 CFR 146.10 (a)(2)(iii)	The Two-Plug method; or			
40 CFR 146.10 (a)(2)(iv)	An alternative method approved by the Director, which will reliably provide a comparable level of protection to underground sources of drinking water.			
40 CFR 146.10 (a)(3)	The well to be abandoned shall be in a state of static equilibrium with the mud weight equalized top to bottom, either by circulating the mud in the well at least once or by a comparable method prescribed by the Director, prior to the placement of the cement plug(s).			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.10 (a)(4)	The plugging and abandonment plan required in 40 CFR 144.51(o) and 144.52(a)(6) shall, in the case of a Class III project which underlies or is in an aquifer which has been exempted under § 146.04, also demonstrate adequate protection of USDWs. The Director shall prescribe aquifer cleanup and monitoring where he deems it necessary and feasible to insure adequate protection of USDWs.			
40 CFR 146.10(b)	Requirements for Class IV wells. Prior to abandoning a Class IV well, the owner or operator shall close the well in accordance with 40 CFR 144.23(b).			
40 CFR 146.10(c)(1)	Requirements for Class V wells. (1) Prior to abandoning a Class V well, the owner or operator shall close the well in a manner that prevents the movement of fluid containing any contaminant into an underground source of drinking water, if the presence of that contaminant may cause a violation of any primary drinking water regulation under 40 CFR part 141 or may otherwise adversely affect the health of persons. Closure requirements for motor vehicle waste disposal wells and large-capacity cesspools are reiterated at § 144.89.			
40 CFR 146.10(c)(2)	The owner or operator shall dispose of or otherwise manage any soil, gravel, sludge, liquids, or other materials removed from or adjacent to the well in accordance with all applicable Federal, State, and local regulations and requirements.			
Subpart B—Criteria and Standards Applicable to Class I Wells				
40 CFR 146.11	<p>40 CFR 146.11 Criteria and standards applicable to Class I nonhazardous wells.</p> <p>This subpart establishes criteria and standards for underground injection control programs to regulate Class I nonhazardous wells.</p>			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 146.12(a)	40 CFR 146.12 Construction requirements. All Class I wells shall be sited in such a fashion that they inject into a formation which is beneath the lowermost formation containing, within one quarter mile of the well bore, an underground source of drinking water.			
40 CFR 146.12(b)	All Class I wells shall be cased and cemented to prevent the movement of fluids into or between underground sources of drinking water. The casing and cement used in the construction of each newly drilled well shall be designed for the life expectancy of the well. In determining and specifying casing and cementing requirements, the following factors shall be considered:			
40 CFR 146.12(b)(1)	Depth to the injection zone;			
40 CFR 146.12(b)(2)	Injection pressure, external pressure, internal pressure, and axial loading;			
40 CFR 146.12(b)(3)	Hole size;			
40 CFR 146.12(b)(4)	Size and grade of all casing strings (wall thickness, diameter, nominal weight, length, joint specification, and construction material);			
40 CFR 146.12(b)(5)	Corrosiveness of injected fluid, formation fluids, and temperatures;			
40 CFR 146.12(b)(6)	Lithology of injection and confining intervals; and			
40 CFR 146.12(b)(7)	Type or grade of cement.			
40 CFR 146.12(c)	All Class I injection wells, except those municipal wells injecting non-corrosive wastes, shall inject fluids through tubing with a packer set immediately above the injection zone, or tubing with an approved fluid seal as an alternative. The tubing, packer, and fluid seal shall be designed for the expected service.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.12(c)(1)	The use of other alternatives to a packer may be allowed with the written approval of the Director. To obtain approval, the operator shall submit a written request to the Director, which shall set forth the proposed alternative and all technical data supporting its use. The Director shall approve the request if the alternative method will reliably provide a comparable level of protection to underground sources of drinking water. The Director may approve an alternative method solely for an individual well or for general use.			
40 CFR 146.12(c)(2)	In determining and specifying requirements for tubing, packer, or alternatives the following factors shall be considered:			
40 CFR 146.12(c)(2)(i)	Depth of setting;			
40 CFR 146.12(c)(2)(i)	Characteristics of injection fluid (chemical content, corrosiveness, and density);			
40 CFR 146.12(c)(2)(i)	Injection pressure;			
40 CFR 146.12(c)(2)(i)	Annular pressure;			
40 CFR 146.12(c)(2)(v)	Rate, temperature and volume of injected fluid; and			
40 CFR 146.12(c)(2)(v)	Size of casing.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 146.12(d)	Appropriate logs and other tests shall be conducted during the drilling and construction of new Class I wells. A descriptive report interpreting the results of such logs and tests shall be prepared by a knowledgeable log analyst and submitted to the Director. At a minimum, such logs and tests shall include:			
40 CFR 146.12(d)(1)	Deviation checks on all holes constructed by first drilling a pilot hole, and then enlarging the pilot hole by reaming or another method. Such checks shall be at sufficiently frequent intervals to assure that vertical avenues for fluid migration in the form of diverging holes are not created during drilling.			
40 CFR 146.12(d)(2)	Such other logs and tests as may be needed after taking into account the availability of similar data in the area of the drilling site, the construction plan, and the need for additional information, that may arise from time to time as the construction of the well progresses. In determining which logs and tests shall be required, the following logs shall be considered for use in the following situations:			
40 CFR 146.12(d)(2)(i)	For surface casing intended to protect underground sources of drinking water:			
40 CFR 146.12(d)(2)(i)(A)	Resistivity, spontaneous potential, and caliper logs before the casing is installed; and			
40 CFR 146.12(d)(2)(i)(B)	A cement bond, temperature, or density log after the casing is set and cemented.			
40 CFR 146.12(d)(2)(i)	For intermediate and long strings of casing intended to facilitate injection:			
40 CFR 146.12(d)(2)(i)(A)	Resistivity, spontaneous potential, porosity, and gamma ray logs before the casing is installed;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	Difference
40 CFR 146.14(a)(2)	A map showing the injection well(s) for which a permit is sought and the applicable area of review. Within the area of review, the map must show the number, or name, and location of all producing wells, dry holes, surface bodies of water, springs, mines (surface and subsurface), quarries, water wells and other pertinent surface features including residences and roads. The map should also show faults, if known or suspected. Only information of public record is required to be included on this map;			
40 CFR 146.14(a)(3)	A tabulation of data on all wells within the area of review which penetrate into the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of plugging and/or completion, and any additional information the Director may require;			
40 CFR 146.14(a)(4)	Maps and cross sections indicating the general vertical and lateral limits of all underground sources of drinking water within the area of review, their position relative to the injection formation and the direction of water movement, where known, in each underground source of drinking water which may be affected by the proposed injection;			
40 CFR 146.14(a)(5)	Maps and cross sections detailing the geologic structure of the local area;			
40 CFR 146.14(a)(6)	Generalized maps and cross sections illustrating the regional geologic setting;			
40 CFR 146.14(a)(7)	Proposed operating data:			
40 CFR 146.14(a)(7)(i)	Average and maximum daily rate and volume of the fluid to be injected;			
40 CFR 146.14(a)(7)(i)	Average and maximum injection pressure; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.22 (b)(1)	All Class II injection wells shall be cased and cemented to prevent movement of fluids into or between underground sources of drinking water. The casing and cement used in the construction of each newly drilled well shall be designed for the life expectancy of the well. In determining and specifying casing and cementing requirements, the following factors shall be considered:			
40 CFR 146.22 (b)(1)(i)	Depth to the injection zone;			
40 CFR 146.22 (b)(1)(ii)	Depth to the bottom of all USDWs; and			
40 CFR 146.22 (b)(1)(iii)	Estimated maximum and average injection pressures;			
40 CFR 146.22 (b)(2)	In addition the Director may consider information on: nature of formation fluids; lithology of injection and confining zones; external pressure, internal pressure, and axial loading; hole size; size and grade of all casing strings; and class of cement.			
40 CFR 146.22 (b)(2)(i)	Nature of formation fluids;			
40 CFR 146.22 (b)(2)(ii)	Lithology of injection and confining zones;			
40 CFR 146.22 (b)(2)(iii)	External pressure, internal pressure, and axial loading;			
40 CFR 146.22 (b)(2)(iv)	Hole size;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.22 (b)(2)(v)	Size and grade of all casing strings; and			
40 CFR 146.22 (b)(2)(vi)	Class of cement.			
40 CFR 146.22(c)	The requirements in paragraph (b) of this section need not apply to existing or newly converted Class II wells located in existing fields if:			
40 CFR 146.22(c)(1)	Regulatory controls for casing and cementing existed for those wells at the time of drilling and those wells are in compliance with those controls; and			
40 CFR 146.22(c)(2)	Well injection will not result in the movement of fluids into an underground source of drinking water so as to create a significant risk to the health of persons.			
40 CFR 146.22(d)	The requirements in paragraph (b) of this section need not apply to newly drilled wells in existing fields if;			
40 CFR 146.22(d)(1)	They meet the requirements of the State for casing and cementing applicable to that field at the time of submission of the State program to the Administrator; and			
40 CFR 146.22(d)(2)	Well injection will not result in the movement of fluids into an underground source of drinking water so as to create a significant risk to the health of persons.			
40 CFR 146.22(e)	Where a State did not have regulatory controls for casing and cementing prior to the time of the submission of the State program to the Administrator, the Director need not apply the casing and cementing requirements in paragraph (b) of this section if he submits as a part of his application for primacy, an appropriate plan for casing and cementing of existing, newly converted, and newly drilled wells in existing fields, and the Administrator approves the plan.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.22(f)	Appropriate logs and other tests shall be conducted during the drilling and construction of new Class II wells. A descriptive report interpreting the results of that portion of those logs and tests which specifically relate to (1) an USDW and the confining zone adjacent to it, and (2) the injection and adjacent formations shall be prepared by a knowledgeable log analyst and submitted to the director. At a minimum, these logs and tests shall include:			
40 CFR 146.22(f)(1)	Deviation checks on all holes constructed by first drilling a pilot hole and then enlarging the pilot hole, by reaming or another method. Such checks shall be at sufficiently frequent intervals to assure that vertical avenues for fluid movement in the form of diverging holes are not created during drilling.			
40 CFR 146.22(f)(2)	Such other logs and tests as may be needed after taking into account the availability of similar data in the area of the drilling site, the construction plan, and the need for additional information that may arise from time to time as the construction of the well progresses. In determining which logs and tests shall be required the following shall be considered by the Director in setting logging and testing requirements:			
40 CFR 146.22(f)(2)(i)	For surface casing intended to protect underground sources of drinking water in areas where the lithology has not been determined:			
40 CFR 146.22(f)(2)(i)(A)	Electric and caliper logs before casing is installed; and			
40 CFR 146.22(f)(2)(i)(B)	A cement bond, temperature, or density log after the casing is set and cemented.			
40 CFR 146.22(f)(2)(ii)	for intermediate and long strings of casing intended to facilitate injection:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.22(f)(2)(ii)(A)	Electric porosity and gamma ray logs before the casing is installed;			
40 CFR 146.22(f)(2)(ii)(B)	Fracture finder logs; and			
40 CFR 146.22(f)(2)(ii)(C)	A cement bond, temperature, or density log after the casing is set and cemented.			
40 CFR 146.22(g)	At a minimum, the following information concerning the injection formation shall be determined or calculated for new Class II wells or projects:			
40 CFR 146.22(g)(1)	Fluid pressure;			
40 CFR 146.22(g)(2)	Estimated fracture pressure;			
40 CFR 146.22(g)(3)	Physical and chemical characteristics of the injection zone.			
40 CFR 146.23(a)	40 CFR 146.23 Operating, monitoring, and reporting requirements. Operating requirements. Operating requirements shall, at a minimum, specify that:			
40 CFR 146.23(a)(1)	Injection pressure at the wellhead shall not exceed a maximum which shall be calculated so as to assure that the pressure during injection does not initiate new fractures or propagate existing fractures in the confining zone adjacent to the USDWs. In no case shall injection pressure cause the movement of injection or formation fluids into an underground source of drinking water			
40 CFR 146.23(a)(2)	Injection between the outermost casing protecting underground sources of drinking water and the well bore shall be prohibited.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.23(b)	Monitoring requirements. Monitoring requirements shall, at a minimum, include:			
40 CFR 146.23(b)(1)	Monitoring of the nature of injected fluids at time intervals sufficiently frequent to yield data representative of their characteristics;			
40 CFR 146.23(b)(2)	Observation of injection pressure, flow rate, and cumulative volume at least with the following frequencies:			
40 CFR 146.23(b)(2)(i)	Weekly for produced fluid disposal operations;			
40 CFR 146.23(b)(2)(ii)	Monthly for enhanced recovery operations;			
40 CFR 146.23(b)(2)(iii)	Daily during the injection of liquid hydrocarbons and injection for withdrawal of stored hydrocarbons; and			
40 CFR 146.23(b)(2)(iv)	Daily during the injection phase of cyclic steam operations And recording of one observation of injection pressure, flow rate and cumulative volume at reasonable intervals no greater than 30 days.			
40 CFR 146.23(b)(3)	A demonstration of mechanical integrity pursuant to § 146.8 at least once every five years during the life of the injection well;			
40 CFR 146.23(b)(4)	Maintenance of the results of all monitoring until the next permit review (see 40 CFR 144.52(a)(5)); and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.23(b)(5)	Hydrocarbon storage and enhanced recovery may be monitored on a field or project basis rather than on an individual well basis by manifold monitoring. Manifold monitoring may be used in cases of facilities consisting of more than one injection well, operating with a common manifold. Separate monitoring systems for each well are not required provided the owner/operator demonstrates that manifold monitoring is comparable to individual well monitoring.			
40 CFR 146.23(c)(1)	Reporting requirements. (1) Reporting requirements shall at a minimum include an annual report to the Director summarizing the results of monitoring required under paragraph (b) of this section. Such summary shall include monthly records of injected fluids, and any major changes in characteristics or sources of injected fluid. Previously submitted information may be included by reference.			
40 CFR 146.23(c)(2)	Owners or operators of hydrocarbon storage and enhanced recovery projects may report on a field or project basis rather than an individual well basis where manifold monitoring is used.			
40 CFR 146.24	40 CFR 146.24 Information to be considered by the Director. This section sets forth the information which must be considered by the Director in authorizing Class II wells. Certain maps, cross-sections, tabulations of wells within the area of review, and other data may be included in the application by reference provided they are current, readily available to the Director (for example, in the permitting agency's files) and sufficiently identified to be retrieved.			
40 CFR 146.24(a)	Prior to the issuance of a permit for an existing Class II well to operate or the construction or conversion of a new Class II well the Director shall consider the following:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.24(a)(1)	Information required in 40 CFR 144.31 and 144.31(g);			
40 CFR 146.24(a)(2)	A map showing the injection well or project area for which a permit is sought and the applicable area of review. Within the area of review, the map must show the number or name and location of all existing producing wells, injection wells, abandoned wells, dry holes, and water wells. The map may also show surface bodies of waters, mines (surface and subsurface), quarries and other pertinent surface features including residences and roads, and faults if known or suspected. Only information of public record and pertinent information known to the applicant is required to be included on this map. This requirement does not apply to existing Class II wells; and			
40 CFR 146.24(a)(3)	A tabulation of data reasonably available from public records or otherwise known to the applicant on all wells within the area of review included on the map required under paragraph (a)(2) of this section which penetrate the proposed injection zone or, in the case of Class II wells operating over the fracture pressure of the injection formation, all known wells within the area of review which penetrate formations affected by the increase in pressure. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of plugging and complete, and any additional information the Director may require. In cases where the information would be repetitive and the wells are of similar age, type, and construction the Director may elect to only require data on a representative number of wells. This requirement does not apply to existing Class II wells.			
40 CFR 146.24(a)(4)	Proposed operating data:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.31	40 CFR 146.31 Applicability. This subpart establishes criteria and standards for underground injection control programs to regulate Class III wells.			
40 CFR 146.32(a)	40 CFR 146.32 Construction requirements. All new Class III wells shall be cased and cemented to prevent the migration of fluids into or between underground sources of drinking water. The Director may waive the cementing requirement for new wells in existing projects or portions of existing projects where he has substantial evidence that no contamination of underground sources of drinking water would result. The casing and cement used in the construction of each newly drilled well shall be designed for the life expectancy of the well. In determining and specifying casing and cementing requirements, the following factors shall be considered:			
40 CFR 146.32(a)(1)	Depth to the injection zone;			
40 CFR 146.32(a)(2)	Injection pressure, external pressure, internal pressure, axial loading, etc.;			
40 CFR 146.32(a)(3)	Hole size;			
40 CFR 146.32(a)(4)	Size and grade of all casing strings (wall thickness, diameter, nominal weight, length, joint specification, and construction material);			
40 CFR 146.32(a)(5)	Corrosiveness of injected fluids and formation fluids;			
40 CFR 146.32(a)(6)	Lithology of injection and confining zones; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.32(a)(7)	Type and grade of cement.			
40 CFR 146.32(b)	Appropriate logs and other tests shall be conducted during the drilling and construction of new Class III wells. A descriptive report interpreting the results of such logs and tests shall be prepared by a knowledgeable log analyst and submitted to the Director. The logs and tests appropriate to each type of Class III well shall be determined based on the intended function, depth, construction and other characteristics of the well, availability of similar data in the area of the drilling site and the need for additional information that may arise from time to time as the construction of the well progresses. Deviation checks shall be conducted on all holes where pilot holes and reaming are used, unless the hole will be cased and cemented by circulating cement to the surface. Where deviation checks are necessary they shall be conducted at sufficiently frequent intervals to assure that vertical avenues for fluid migration in the form of diverging holes are not created during drillings.			
40 CFR 146.32 (c)	Where the injection zone is a formation which is naturally water-bearing the following information concerning the injection zone shall be determined or calculated for new Class III wells or projects:			
40 CFR 146.32 (c)(1)	Fluid pressure;			
40 CFR 146.32 (c)(2)	Fracture pressure; and			
40 CFR 146.32 (c)(3)	Physical and chemical characteristics of the formation fluids.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.32 (d)	Where the injection formation is not a water-bearing formation, the information in paragraph (c)(2) of this section must be submitted.			
40 CFR 146.32 (e)	Where injection is into a formation which contains water with less than 10,000 mg/l TDS monitoring wells shall be completed into the injection zone and into any underground sources of drinking water above the injection zone which could be affected by the mining operation. These wells shall be located in such a fashion as to detect any excursion of injection fluids, process by-products, or formation fluids outside the mining area or zone. If the operation may be affected by subsidence or catastrophic collapse the monitoring wells shall be located so that they will not be physically affected.			
40 CFR 146.32 (f)	Where injection is into a formation which does not contain water with less than 10,000 mg/l TDS, no monitoring wells are necessary in the injection stratum.			
40 CFR 146.32(g)	Where the injection wells penetrate an USDW in an area subject to subsidence or catastrophic collapse an adequate number of monitoring wells shall be completed into the USDW to detect any movement of injected fluids, process by-products or formation fluids into the USDW. The monitoring wells shall be located outside the physical influence of the subsidence or catastrophic collapse.			
40 CFR 146.32(h)	In determining the number, location, construction and frequency of monitoring of the monitoring wells the following criteria shall be considered:			
40 CFR 146.32(h)(1)	The population relying on the USDW affected or potentially affected by the injection operation;			
40 CFR 146.32(h)(2)	The proximity of the injection operation to points of withdrawal of drinking water;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.32(h)(3)	The local geology and hydrology;			
40 CFR 146.32(h)(4)	The operating pressures and whether a negative pressure gradient is being maintained;			
40 CFR 146.32(h)(5)	The nature and volume of the injected fluid, the formation water, and the process by-products; and			
40 CFR 146.32(h)(6)	The injection well density.			
40 CFR 146.33(a)	40 CFR 146.33 Operating, monitoring, and reporting requirements. Operating requirements. Operating requirements prescribed shall, at a minimum, specify that:			
40 CFR 146.33(a)(1)	Except during well stimulation injection pressure at the wellhead shall be calculated so as to assure that the pressure in the injection zone during injection does not initiate new fractures or propagate existing fractures in the injection zone. In no case, shall injection pressure initiate fractures in the confining zone or cause the migration of injection or formation fluids into an underground source of drinking water.			
40 CFR 146.33(a)(2)	Injection between the outermost casing protecting underground sources of drinking water and the well bore is prohibited.			
40 CFR 146.33(b)	Monitoring requirements. Monitoring requirements shall, at a minimum, specify:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.33(b)(1)	Monitoring of the nature of injected fluids with sufficient frequency to yield representative data on its characteristics. Whenever the injection fluid is modified to the extent that the analysis required by § 146.34(a)(7)(iii) is incorrect or incomplete, a new analysis as required by § 146.34(a)(7)(iii) shall be provided to the Director.			
40 CFR 146.33(b)(2)	Monitoring of injection pressure and either flow rate or volume semi-monthly, or metering and daily recording of injected and produced fluid volumes as appropriate.			
40 CFR 146.33(b)(3)	Demonstration of mechanical integrity pursuant to § 146.08 at least once every five years during the life of the well for salt solution mining.			
40 CFR 146.33(b)(4)	Monitoring of the fluid level in the injection zone semi-monthly, where appropriate and monitoring of the parameters chosen to measure water quality in the monitoring wells required by § 146.32(e), semi-monthly.			
40 CFR 146.33(b)(5)	Quarterly monitoring of wells required by § 146.32(g).			
40 CFR 146.33(b)(6)	All Class III wells may be monitored on a field or project basis rather than an individual well basis by manifold monitoring. Manifold monitoring may be used in cases of facilities consisting of more than one injection well, operating with a common manifold. Separate monitoring systems for each well are not required provided the owner/operator demonstrates that manifold monitoring is comparable to individual well monitoring.			
40 CFR 146.33(c)	Reporting requirements. Reporting requirements shall, at a minimum, include:			
40 CFR 146.33(c)(1)	Quarterly reporting to the Director on required monitoring;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.33(c)(2)	Results of mechanical integrity and any other periodic test required by the Director reported with the first regular quarterly report after the completion of the test; and			
40 CFR 146.33(c)(3)	Monitoring may be reported on a project or field basis rather than individual well basis where manifold monitoring is used.			
40 CFR 146.34	<p>40 CFR 146.34 Information to be considered by the Director.</p> <p>This section sets forth the information which must be considered by the Director in authorizing Class III wells. Certain maps, cross sections, tabulations of wells within the area of review, and other data may be included in the application by reference provided they are current, readily available to the Director (for example, in the permitting agency's files) and sufficiently identified to be retrieved.</p>			
40 CFR 146.34(a)	Prior to the issuance of a permit for an existing Class III well or area to operate or the construction of a new Class III well the Director shall consider the following:			
40 CFR 146.34(a)(1)	Information required in 40 CFR 144.31 and 144.31(g);			
40 CFR 146.34(a)(2)	A map showing the injection well or project area for which a permit is sought and the applicable area of review. Within the area of review, the map must show the number or name and location of all existing producing wells, injection wells, abandoned wells, dry holes, public water systems and water wells. The map may also show surface bodies of waters, mines (surface and subsurface), quarries and other pertinent surface features including residences and roads, and faults if known or suspected. Only information of public record and pertinent information known to the applicant is required to be included on this map.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.34(c)(5)	The procedure to be used to meet the requirements of § 146.10(c).			
Subpart E—Criteria and Standards Applicable to Class IV Injection Wells				
Subpart F—Criteria and Standards Applicable to Class V Injection Wells				
40 CFR 146.51	40 CFR 146.51 Applicability. This subpart sets forth criteria and standards for underground injection control programs to regulate all injection not regulated in subparts B, C, D, and E.			
40 CFR 146.51(a)	Generally, wells covered by this subpart inject non-hazardous fluids into or above formations that contain underground sources of drinking water. It includes all wells listed in § 146.5(e) but is not limited to those types of injection wells.			
40 CFR 146.51(b)	It also includes wells not covered in Class IV that inject radioactive material listed in 10 CFR part 20, appendix B, table II, column 2.			
Subpart G—Criteria and Standards Applicable to Class I Hazardous Wells				

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.61(a)	40 CFR 146.61 Applicability. This subpart establishes criteria and standards for underground injection control programs to regulate Class I hazardous waste injection wells. Unless otherwise noted this subpart supplements the requirements of subpart A and applies instead of subpart B to Class I hazardous waste injection wells.			
40 CFR 146.61(b)	Definitions Cone of influence means that area around the well within which increased injection zone pressures caused by injection into the hazardous waste injection well would be sufficient to drive fluids into an underground source of drinking water (USDW).			
	Existing well means a Class I well which was authorized prior to August 25, 1988, by an approved State program, or an EPA-administered program or a well which has become a Class I well as a result of a change in the definition of the injected waste which would render the waste hazardous under § 261.3 of this part.			
	Injection interval means that part of the injection zone in which the well is screened, or in which the waste is otherwise directly emplaced.			
	New well means any Class I hazardous waste injection well which is not an existing well.			
	Transmissive fault or fracture is a fault or fracture that has sufficient permeability and vertical extent to allow fluids to move between formations.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 146.62 (a)	40 CFR 146.62 Minimum criteria for siting. All Class I hazardous waste injection wells shall be sited such that they inject into a formation that is beneath the lowermost formation containing within one quarter mile of the well bore an underground source of drinking water.			
40 CFR 146.62(b)	The siting of Class I hazardous waste injection wells shall be limited to areas that are geologically suitable. The Director shall determine geologic suitability based upon:			
40 CFR 146.62(b)(1)	An analysis of the structural and stratigraphic geology, the hydrogeology, and the seismicity of the region;			
40 CFR 146.62(b)(2)	An analysis of the local geology and hydrogeology of the well site, including, at a minimum, detailed information regarding stratigraphy, structure and rock properties, aquifer hydrodynamics and mineral resources; and			
40 CFR 146.62(b)(3)	A determination that the geology of the area can be described confidently and that limits of waste fate and transport can be accurately predicted through the use of models.			
40 CFR 146.62(c)	Class I hazardous waste injection wells shall be sited such that:			
40 CFR 146.62(c)(1)	The injection zone has sufficient permeability, porosity, thickness and areal extent to prevent migration of fluids into USDWs.			
40 CFR 146.62(c)(2)	The confining zone:			
40 CFR 146.62(c)(2)(i)	Is laterally continuous and free of transecting, transmissive faults or fractures over an area sufficient to prevent the movement of fluids into a USDW; and			
40 CFR 146.62(c)(2)(ii)	Contains at least one formation of sufficient thickness and with lithologic and stress characteristics capable of preventing vertical propagation of fractures.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.62(d)	The owner or operator shall demonstrate to the satisfaction of the Director that:			
40 CFR 146.62(d)(1)	The confining zone is separated from the base of the lowermost USDW by at least one sequence of permeable and less permeable strata that will provide an added layer of protection for the USDW in the event of fluid movement in an unlocated borehole or transmissive fault; or			
40 CFR 146.62(d)(2)	Within the area of review, the piezometric surface of the fluid in the injection zone is less than the piezometric surface of the lowermost USDW, considering density effects, injection pressures and any significant pumping in the overlying USDW; or			
40 CFR 146.62(d)(3)	There is no USDW present.			
40 CFR 146.62(d)(4)	The Director may approve a site which does not meet the requirements in paragraphs (d) (1), (2), or (3) of this section if the owner or operator can demonstrate to the Director that because of the geology, nature of the waste, or other considerations, abandoned boreholes or other conduits would not cause endangerment of USDWs.			
40 CFR 146.63	40 CFR 146.63 Area of review. For the purposes of Class I hazardous waste wells, this section shall apply to the exclusion of § 146.6. The area of review for Class I hazardous waste injection wells shall be a 2-mile radius around the well bore. The Director may specify a larger area of review based on the calculated cone of influence of the well.			
40 CFR 146.64	40 CFR 146.64 Corrective action for wells in the area of review. For the purposes of Class I hazardous waste wells, this section shall apply to the exclusion of §§ 144.55 and 146.07.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.64(a)	The owner or operator of a Class I hazardous waste well shall as part of the permit application submit a plan to the Director outlining the protocol used to:			
40 CFR 146.64(a)(1)	Identify all wells penetrating the confining zone or injection zone within the area of review; and			
40 CFR 146.64(a)(2)	Determine whether wells are adequately completed or plugged.			
40 CFR 146.64 (b)	The owner or operator of a Class I hazardous waste well shall identify the location of all wells within the area of review that penetrate the injection zone or the confining zone and shall submit as required in § 146.70(a):			
40 CFR 146.64(b)(1)	A tabulation of all wells within the area of review that penetrate the injection zone or the confining zone; and			
40 CFR 146.64(b)(2)	A description of each well or type of well and any records of its plugging or completion.			
40 CFR 146.64 (c)	For wells that the Director determines are improperly plugged, completed, or abandoned, or for which plugging or completion information is unavailable, the applicant shall also submit a plan consisting of such steps or modification as are necessary to prevent movement of fluids into or between USDWs. Where the plan is adequate, the Director shall incorporate it into the permit as a condition. Where the Director's review of an application indicates that the permittee's plan is inadequate (based at a minimum on the factors in paragraph (e) of this section), the Director shall:			
40 CFR 146.64(c)(1)	Require the applicant to revise the plan;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.64(c)(2)	Prescribe a plan for corrective action as a condition of the permit; or			
40 CFR 146.64(c)(3)	Deny the application.			
40 CFR 146.64 (d)(1)	Requirements: (1) Existing injection wells. Any permit issued for an existing Class I hazardous waste injection well requiring corrective action other than pressure limitations shall include a compliance schedule requiring any corrective action accepted or prescribed under paragraph (c) of this section. Any such compliance schedule shall provide for compliance no later than 2 years following issuance of the permit and shall require observance of appropriate pressure limitations under paragraph (d)(3) until all other corrective action measures have been implemented.			
40 CFR 146.64 (d)(2)	New injection wells. No owner or operator of a new Class I hazardous waste injection well may begin injection until all corrective actions required under this section have been taken.			
40 CFR 146.64 (d)(3)	The Director may require pressure limitations in lieu of plugging. If pressure limitations are used in lieu of plugging, the Director shall require as a permit condition that injection pressure be so limited that pressure in the injection zone at the site of any improperly completed or abandoned well within the area of review would not be sufficient to drive fluids into or between USDWs. This pressure limitation shall satisfy the corrective action requirement. Alternatively, such injection pressure limitation may be made part of a compliance schedule and may be required to be maintained until all other required corrective actions have been implemented.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.64 (e)	In determining the adequacy of corrective action proposed by the applicant under paragraph (c) of this section and in determining the additional steps needed to prevent fluid movement into and between USDWs, the following criteria and factors shall be considered by the Director:			
40 CFR 146.64 (e)(1)	Nature and volume of injected fluid;			
40 CFR 146.64 (e)(2)	Nature of native fluids or byproducts of injection;			
40 CFR 146.64 (e)(3)	Geology;			
40 CFR 146.64 (e)(4)	Hydrology;			
40 CFR 146.64 (e)(5)	History of the injection operation;			
40 CFR 146.64 (e)(6)	Completion and plugging records;			
40 CFR 146.64 (e)(7)	Closure procedures in effect at the time the well was closed;			
40 CFR 146.64 (e)(8)	Hydraulic connections with USDWs;			
40 CFR 146.64 (e)(9)	Reliability of the procedures used to identify abandoned wells; and			
40 CFR 146.64 (e)(10)	Any other factors which might affect the movement of fluids into or between USDWs.			
40 CFR 146.65 (a)	40 CFR 146.65 Construction requirements. General. All existing and new Class I hazardous waste injection wells shall be constructed and completed to:			
40 CFR 146.65(a)(1)	Prevent the movement of fluids into or between USDWs or into any unauthorized zones;			
40 CFR 146.65(a)(2)	Permit the use of appropriate testing devices and workover tools; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.65(a)(3)	Permit continuous monitoring of injection tubing and long string casing as required pursuant to § 146.67(f).			
40 CFR 146.65(b)	Compatibility. All well materials must be compatible with fluids with which the materials may be expected to come into contact. A well shall be deemed to have compatibility as long as the materials used in the construction of the well meet or exceed standards developed for such materials by the American Petroleum Institute, The American Society for Testing Materials, or comparable standards acceptable to the Director.			
40 CFR 146.65 (c)(1)	Casing and Cementing of New Wells. (1) Casing and cement used in the construction of each newly drilled well shall be designed for the life expectancy of the well, including the post-closure care period. The casing and cementing program shall be designed to prevent the movement of fluids into or between USDWs, and to prevent potential leaks of fluids from the well. In determining and specifying casing and cementing requirements, the Director shall consider the following information as required by § 146.70:			
40 CFR 146.65 (c)(1)(i)	Depth to the injection zone;			
40 CFR 146.65 (c)(1)(ii)	Injection pressure, external pressure, internal pressure and axial loading;			
40 CFR 146.65 (c)(1)(iii)	Hole size;			
40 CFR 146.65 (c)(1)(iv)	Size and grade of all casing strings (well thickness, diameter, nominal weight, length, joint specification and construction material);			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.65 (c)(4)	Circulation of cement may be accomplished by staging. The Director may approve an alternative method of cementing in cases where the cement cannot be recirculated to the surface, provided the owner or operator can demonstrate by using logs that the cement is continuous and does not allow fluid movement behind the well bore.			
40 CFR 146.65 (c)(5)	Casings, including any casing connections, must be rated to have sufficient structural strength to withstand, for the design life of the well:			
40 CFR 146.65 (c)(5)(i)	The maximum burst and collapse pressures which may be experienced during the construction, operation and closure of the well; and			
40 CFR 146.65 (c)(5)(ii)	The maximum tensile stress which may be experienced at any point along the length of the casing during the construction, operation, and closure of the well.			
40 CFR 146.65 (c)(6)	At a minimum, cement and cement additives must be of sufficient quality and quantity to maintain integrity over the design life of the well.			
40 CFR 146.65 (d)(1)	Tubing and packer. (1) All Class I hazardous waste injection wells shall inject fluids through tubing with a packer set at a point specified by the Director.			
40 CFR 146.65 (d)(2)	In determining and specifying requirements for tubing and packer, the following factors shall be considered:			
40 CFR 146.65 (d)(2)(i)	Depth of setting;			
40 CFR 146.65 (d)(2)(ii)	Characteristics of injection fluid (chemical content, corrosiveness, temperature and density);			
40 CFR 146.65 (d)(2)(iii)	Injection pressure;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.65 (d)(2)(vi)	Size of casing; and			
40 CFR 146.65 (d)(2)(vii)	Tubing tensile, burst, and collapse strengths.			
40 CFR 146.65 (e)(2)	The Director may approve the use of a fluid seal if he determines that the following conditions are met:			
40 CFR 146.65 (e)(2)(i)	The operator demonstrates that the seal will provide a level of protection comparable to a packer;			
40 CFR 146.65 (e)(2)(ii)	The operator demonstrates that the staff is, and will remain, adequately trained to operate and maintain the well and to identify and interpret variations in parameters of concern;			
40 CFR 146.65 (e)(2)(iii)	The permit contains specific limitations on variations in annular pressure and loss of annular fluid;			
40 CFR 146.65 (e)(2)(iv)	The design and construction of the well allows continuous monitoring of the annular pressure and mass balance of annular fluid; and			
40 CFR 146.65 (e)(2)(v)	A secondary system is used to monitor the interface between the annulus fluid and the injection fluid and the permit contains requirements for testing the system every three months and recording the results.

40 CFR 146.66(a)	<p>40 CFR 146.66 Logging, sampling, and testing prior to new well operation.</p> <p>During the drilling and construction of a new Class I hazardous waste injection well, appropriate logs and tests shall be run to determine or verify the depth, thickness, porosity, permeability, and rock type of, and the salinity of any entrained fluids in, all relevant geologic units to assure conformance with performance standards in § 146.65, and to establish accurate baseline data against which future measurements may be compared. A descriptive report interpreting results of such logs and tests shall be prepared by a knowledgeable log analyst and submitted to the Director. At a minimum, such logs and tests shall include:</p>			
40 CFR 146.66(a)(1)	Deviation checks during drilling on all holes constructed by drilling a pilot hole which are enlarged by reaming or another method. Such checks shall be at sufficiently frequent intervals to determine the location of the borehole and to assure that vertical avenues for fluid movement in the form of diverging holes are not created during drilling; and			
40 CFR 146.66(a)(2)	Such other logs and tests as may be needed after taking into account the availability of similar data in the area of the drilling site, the construction plan, and the need for additional information that may arise from time to time as the construction of the well progresses. At a minimum, the following logs shall be required in the following situations:			
40 CFR 146.66(a)(2)(i)	Upon installation of the surface casing:			
40 CFR 146.66(a)(2)(i)(A)	Resistivity, spontaneous potential, and caliper logs before the casing is installed; and

Citation	Summary	Citation	Summary	
40 CFR 146.66(b)	Whole cores or sidewall cores of the confining and injection zones and formation fluid samples from the injection zone shall be taken. The Director may accept cores from nearby wells if the owner or operator can demonstrate that core retrieval is not possible and that such cores are representative of conditions at the well. The Director may require the owner or operator to core other formations in the borehole.			
40 CFR 146.66(c)	The fluid temperature, pH, conductivity, pressure and the static fluid level of the injection zone must be recorded.			
40 CFR 146.66(d)	At a minimum, the following information concerning the injection and confining zones shall be determined or calculated for Class I hazardous waste injection wells:			
40 CFR 146.66(d)(1)	Fracture pressure;			
40 CFR 146.66(d)(2)	Other physical and chemical characteristics of the injection and confining zones; and			
40 CFR 146.66(d)(3)	Physical and chemical characteristics of the formation fluids in the injection zone.			
40 CFR 146.66(e)	Upon completion, but prior to operation, the owner or operator shall conduct the following tests to verify hydrogeologic characteristics of the injection zone:			
40 CFR 146.66(e)(1)	A pump test; or			
40 CFR 146.66(e)(2)	Injectivity tests.			
40 CFR 146.66(f)	The Director shall have the opportunity to witness all logging and testing by this subpart. The owner or operator shall submit a schedule of such activities to the Director 30 days prior to conducting the first test.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 146.67 (a)	40 CFR 146.67 Operating requirements. Except during stimulation, the owner or operator shall assure that injection pressure at the wellhead does not exceed a maximum which shall be calculated so as to assure that the pressure in the injection zone during injection does not initiate new fractures or propagate existing fractures in the injection zone. The owner or operator shall assure that the injection pressure does not initiate fractures or propagate existing fractures in the confining zone, nor cause the movement of injection or formation fluids into a USDW.			
40 CFR 146.67 (b)	Injection between the outermost casing protecting USDWs and the well bore is prohibited.			
40 CFR 146.67 (c)	The owner or operator shall maintain an annulus pressure that exceeds the operating injection pressure, unless the Director determines that such a requirement might harm the integrity of the well. The fluid in the annulus shall be noncorrosive, or shall contain a corrosion inhibitor.			
40 CFR 146.67 (d)	The owner or operator shall maintain mechanical integrity of the injection well at all times.			
40 CFR 146.67(e)	Permit requirements for owners or operators of hazardous waste wells which inject wastes which have the potential to react with the injection formation to generate gases shall include:			
40 CFR 146.67(e)(1)	Conditions limiting the temperature, pH or acidity of the injected waste; and			
40 CFR 146.67(e)(2)	Procedures necessary to assure that pressure imbalances which might cause a backflow or blowout do not occur.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.70(a)	Prior to the issuance of a permit for an existing Class I hazardous waste injection well to operate or the construction or conversion of a new Class I hazardous waste injection well, the Director shall review the following to assure that the requirements of this part and part 144 are met:			
40 CFR 146.70(a)(1)	Information required in § 144.31;			
40 CFR 146.70(a)(2)	A map showing the injection well for which a permit is sought and the applicable area of review. Within the area of review, the map must show the number or name and location of all producing wells, injection wells, abandoned wells, dry holes, surface bodies of water, springs, mines (surface and subsurface), quarries, water wells and other pertinent surface features, including residences and roads. The map should also show faults, if known or suspected;			
40 CFR 146.70(a)(3)	A tabulation of all wells within the area of review which penetrate the proposed injection zone or confining zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of plugging and/or completion and any additional information the Director may require;			
40 CFR 146.70(a)(4)	The protocol followed to identify, locate and ascertain the condition of abandoned wells within the area of review which penetrate the injection or the confining zones;			
40 CFR 146.70(a)(5)	Maps and cross-sections indicating the general vertical and lateral limits of all underground sources of drinking water within the area of review, their position relative to the injection formation and the direction of water movement, where known, in each underground source of drinking water which may be affected by the proposed injection;			
40 CFR 146.70(a)(6)	Maps and cross-sections detailing the geologic structure of the local area;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.73	40 CFR 146.73 Financial responsibility for post-closure care. The owner or operator shall demonstrate and maintain financial responsibility for post-closure by using a trust fund, surety bond, letter of credit, financial test, insurance or corporate guarantee that meets the specifications for the mechanisms and instruments revised as appropriate to cover closure and post-closure care in 40 CFR part 144, subpart F. The amount of the funds available shall be no less than the amount identified in § 146.72(a)(4)(vi). The obligation to maintain financial responsibility for post-closure care survives the termination of a permit or the cessation of injection. The requirement to maintain financial responsibility is enforceable regardless of whether the requirement is a condition of the permit.			
Subpart H - Criteria and Standards Applicable to Class VI Wells				
40 CFR 146.81(a)	40 CFR 146.81 Applicability. This subpart establishes criteria and standards for underground injection control programs to regulate any Class VI carbon dioxide geologic sequestration injection wells.			
40 CFR 146.81(b)	This subpart applies to any wells used to inject carbon dioxide specifically for the purpose of geologic sequestration, i.e., the long-term containment of a gaseous, liquid, or supercritical carbon dioxide stream in subsurface geologic formations.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.81(c)	This subpart also applies to owners or operators of permit- or rule-authorized Class I, Class II, or Class V experimental carbon dioxide injection projects who seek to apply for a Class VI geologic sequestration permit for their well or wells. Owners or operators seeking to convert existing Class I, Class II, or Class V experimental wells to Class VI geologic sequestration wells must demonstrate to the Director that the wells were engineered and constructed to meet the requirements at 40 CFR 146.86(a) and ensure protection of USDWs, in lieu of requirements at 40 CFR 146.86(b) and 146.87(a). By December 10, 2011, owners or operators of either Class I wells previously permitted for the purpose of geologic sequestration or Class V experimental technology wells no longer being used for experimental purposes that will continue injection of carbon dioxide for the purpose of GS must apply for a Class VI permit. A converted well must still meet all other requirements under part 146.			
40 CFR 146.81(d)	<i>Definitions.</i> The following definitions apply to this subpart. To the extent that these definitions conflict with those in 40 CFR 144.3 or 146.3, these definitions govern for Class VI wells:			
	Area of review means the region surrounding the geologic sequestration project where USDWs may be endangered by the injection activity. The area of review is delineated using computational modeling that accounts for the physical and chemical properties of all phases of the injected carbon dioxide stream and displaced fluids, and is based on available site characterization, monitoring, and operational data as set forth in § 146.84.			
	Carbon dioxide plume means the extent underground, in three dimensions, of an injected carbon dioxide stream.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current	Statutes and Regulations	Difference
Citation	Summary	Citation	Summary	
	Carbon dioxide stream means carbon dioxide that has been captured from an emission source (e.g., a power plant), plus incidental associated substances derived from the source materials and the capture process, and any substances added to the stream to enable or improve the injection process. This subpart does not apply to any carbon dioxide stream that meets the definition of a hazardous waste under 40 CFR part 261.			
	Confining zone means a geologic formation, group of formations, or part of a formation stratigraphically overlying the injection zone(s) that acts as barrier to fluid movement. For Class VI wells operating under an injection depth waiver, confining zone means a geologic formation, group of formations, or part of a formation stratigraphically overlying and underlying the injection zone(s).			
	Corrective action means the use of Director-approved methods to ensure that wells within the area of review do not serve as conduits for the movement of fluids into underground sources of drinking water (USDW).			
	Geologic sequestration means the long-term containment of a gaseous, liquid, or supercritical carbon dioxide stream in subsurface geologic formations. This term does not apply to carbon dioxide capture or transport.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
	Geologic sequestration project means an injection well or wells used to emplace a carbon dioxide stream beneath the lowermost formation containing a USDW; or, wells used for geologic sequestration of carbon dioxide that have been granted a waiver of the injection depth requirements pursuant to requirements at § 146.95; or, wells used for geologic sequestration of carbon dioxide that have received an expansion to the areal extent of an existing Class II enhanced oil recovery or enhanced gas recovery aquifer exemption pursuant to §§ 146.4 and 144.7(d) of this chapter. It includes the subsurface three-dimensional extent of the carbon dioxide plume, associated area of elevated pressure, and displaced fluids, as well as the surface area above that delineated region.			
	Injection zone means a geologic formation, group of formations, or part of a formation that is of sufficient areal extent, thickness, porosity, and permeability to receive carbon dioxide through a well or wells associated with a geologic sequestration project.			
	Post-injection site care means appropriate monitoring and other actions (including corrective action) needed following cessation of injection to ensure that USDWs are not endangered, as required under § 146.93.			
	Pressure front means the zone of elevated pressure that is created by the injection of carbon dioxide into the subsurface. For the purposes of this subpart, the pressure front of a carbon dioxide plume refers to a zone where there is a pressure differential sufficient to cause the movement of injected fluids or formation fluids into a USDW.			
	Site closure means the point/time, as determined by the Director following the requirements under § 146.93, at which the owner or operator of a geologic sequestration site is released from post-injection site care responsibilities.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
	Transmissive fault or fracture means a fault or fracture that has sufficient permeability and vertical extent to allow fluids to move between formations.			
40 CFR 146.82	<p>40 CFR 146.82 Required Class VI permit information.</p> <p>This section sets forth the information which must be considered by the Director in authorizing Class VI wells. For converted Class I, Class II, or Class V experimental wells, certain maps, cross-sections, tabulations of wells within the area of review and other data may be included in the application by reference provided they are current, readily available to the Director, and sufficiently identified to be retrieved.</p>			
40 CFR 146.82(a)	Prior to the issuance of a permit for the construction of a new Class VI well or the conversion of an existing Class I, Class II, or Class V well to a Class VI well, the owner or operator shall submit, pursuant to 40 CFR 146.91(e), and the Director shall consider the following:			
40 CFR 146.82(a)(1)	Information required in 40 CFR 144.31 (e)(1) through (6);			
40 CFR 146.82(a)(2)	A map showing the injection well for which a permit is sought and the applicable area of review consistent with 40 CFR 146.84. Within the area of review, the map must show the number or name, and location of all injection wells, producing wells, abandoned wells, plugged wells or dry holes, deep stratigraphic boreholes, State- or EPA-approved subsurface cleanup sites, surface bodies of water, springs, mines (surface and subsurface), quarries, water wells, other pertinent surface features including structures intended for human occupancy, State, Tribal, and Territory boundaries, and roads. The map should also show faults, if known or suspected. Only information of public record is required to be included on this map;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 146.84(b)	The owner or operator of a Class VI well must prepare, maintain, and comply with a plan to delineate the area of review for a proposed geologic sequestration project, periodically reevaluate the delineation, and perform corrective action that meets the requirements of this section and is acceptable to the Director. The requirement to maintain and implement an approved plan is directly enforceable regardless of whether the requirement is a condition of the permit. As a part of the permit application for approval by the Director, the owner or operator must submit an area of review and corrective action plan that includes the following information:			
40 CFR 146.84(b)(1)	The method for delineating the area of review that meets the requirements of paragraph (c) of this section, including the model to be used, assumptions that will be made, and the site characterization data on which the model will be based;			
40 CFR 146.84(b)(2)	A description of:			
40 CFR 146.84(b)(2)(i)	The minimum fixed frequency, not to exceed five years, at which the owner or operator proposes to reevaluate the area of review;			
40 CFR 146.84(b)(2)(ii)	The monitoring and operational conditions that would warrant a reevaluation of the area of review prior to the next scheduled reevaluation as determined by the minimum fixed frequency established in paragraph (b)(2)(i) of this section.			
40 CFR 146.84(b)(2)(iii)	How monitoring and operational data (e.g., injection rate and pressure) will be used to inform an area of review reevaluation; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 146.84(b)(2)(iv)	How corrective action will be conducted to meet the requirements of paragraph (d) of this section, including what corrective action will be performed prior to injection and what, if any, portions of the area of review will have corrective action addressed on a phased basis and how the phasing will be determined; how corrective action will be adjusted if there are changes in the area of review; and how site access will be guaranteed for future corrective action.			
40 CFR 146.84(c)	Owners or operators of Class VI wells must perform the following actions to delineate the area of review and identify all wells that require corrective action:			
40 CFR 146.84(c)(1)	Predict, using existing site characterization, monitoring and operational data, and computational modeling, the projected lateral and vertical migration of the carbon dioxide plume and formation fluids in the subsurface from the commencement of injection activities until the plume movement ceases, until pressure differentials sufficient to cause the movement of injected fluids or formation fluids into a USDW are no longer present, or until the end of a fixed time period as determined by the Director. The model must:			
40 CFR 146.84(c)(1)(i)	Be based on detailed geologic data collected to characterize the injection zone(s), confining zone(s) and any additional zones; and anticipated operating data, including injection pressures, rates, and total volumes over the proposed life of the geologic sequestration project;			
40 CFR 146.84(c)(1)(ii)	Take into account any geologic heterogeneities, other discontinuities, data quality, and their possible impact on model predictions; and			
40 CFR 146.84(c)(1)(iii)	Consider potential migration through faults, fractures, and artificial penetrations.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.85(a)(4)(i)	Protective conditions of coverage must include at a minimum cancellation, renewal, and continuation provisions, specifications on when the provider becomes liable following a notice of cancellation if there is a failure to renew with a new qualifying financial instrument, and requirements for the provider to meet a minimum rating, minimum capitalization, and ability to pass the bond rating when applicable.			
40 CFR 146.85(a)(4)(i)(A)	Cancellation – for purposes of this part, an owner or operator must provide that their financial mechanism may not cancel, terminate or fail to renew except for failure to pay such financial instrument. If there is a failure to pay the financial instrument, the financial institution may elect to cancel, terminate, or fail to renew the instrument by sending notice by certified mail to the owner or operator and the Director. The cancellation must not be final for 120 days after receipt of cancellation notice. The owner or operator must provide an alternate financial responsibility demonstration within 60 days of notice of cancellation, and if an alternate financial responsibility demonstration is not acceptable (or possible), any funds from the instrument being cancelled must be released within 60 days of notification by the Director.			
40 CFR 146.85(a)(4)(i)(B)	Renewal – for purposes of this part, owners or operators must renew all financial instruments, if an instrument expires, for the entire term of the geologic sequestration project. The instrument may be automatically renewed as long as the owner or operator has the option of renewal at the face amount of the expiring instrument. The automatic renewal of the instrument must, at a minimum, provide the holder with the option of renewal at the face amount of the expiring financial instrument.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.85(a)(4)(i)(C)	Cancellation, termination, or failure to renew may not occur and the financial instrument will remain in full force and effect in the event that on or before the date of expiration: the Director deems the facility abandoned; or the permit is terminated or revoked or a new permit is denied; or closure is ordered by the Director or a U.S. district court or other court of competent jurisdiction; or the owner or operator is named as debtor in a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code; or the amount due is paid.			
40 CFR 146.85(a)(5)	The qualifying financial responsibility instrument(s) must be approved by the Director.			
40 CFR 146.85(a)(5)(i)	The Director shall consider and approve the financial responsibility demonstration for all the phases of the geologic sequestration project prior to issue a Class VI permit (40 CFR 146.82).			
40 CFR 146.85(a)(5)(ii)	The owner or operator must provide any updated information related to their financial responsibility instrument(s) on an annual basis and if there are any changes, the Director must evaluate, within a reasonable time, the financial responsibility demonstration to confirm that the instrument(s) used remain adequate for use. The owner or operator must maintain financial responsibility requirements regardless of the status of the Director's review of the financial responsibility demonstration.			
40 CFR 146.85(a)(5)(iii)	The Director may disapprove the use of a financial instrument if he determines that it is not sufficient to meet the requirements of this section.			
40 CFR 146.85(a)(6)	The owner or operator may demonstrate financial responsibility by using one or multiple qualifying financial instruments for specific phases of the geologic sequestration project.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.85(a)(6)(i)	In the event that the owner or operator combines more than one instrument for a specific geologic sequestration phase (e.g., well plugging), such combination must be limited to instruments that are not based on financial strength or performance (i.e., self insurance or performance bond), for example trust funds, surety bonds guaranteeing payment into a trust fund, letters of credit, escrow account, and insurance. In this case, it is the combination of mechanisms, rather than the single mechanism, which must provide financial responsibility for an amount at least equal to the current cost estimate.			
40 CFR 146.85(a)(6)(ii)	When using a third-party instrument to demonstrate financial responsibility, the owner or operator must provide a proof that the third-party providers either have passed financial strength requirements based on credit ratings; or has met a minimum rating, minimum capitalization, and ability to pass the bond rating when applicable.			
40 CFR 146.85(a)(6)(iii)	An owner or operator using certain types of third party instruments must establish a standby trust to enable EPA to be party to the financial responsibility agreement without EPA being the beneficiary of any funds. The standby trust fund must be used along with other financial responsibility instruments (e.g., surety bonds, letters of credit, or escrow accounts) to provide a location to place funds if needed.			
40 CFR 146.85(a)(6)(iv)	An owner or operator may deposit money to an escrow account to cover financial responsibility requirements; this account must segregate funds sufficient to cover estimated costs for Class VI (geologic sequestration) financial responsibility from other accounts and uses.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current	Statutes and Regulations	Difference
Citation	Summary	Citation	Summary	
40 CFR 146.85(a)(6)(v)	An owner or operator or its guarantor may use self insurance to demonstrate financial responsibility for geologic sequestration projects. In order to satisfy this requirement the owner or operator must meet a Tangible Net Worth of an amount approved by the Director, have a Net working capital and tangible net worth each at least six times the sum of the current well plugging, post injection site care and site closure cost, have assets located in the United States amounting to at least 90 percent of total assets or at least six times the sum of the current well plugging, post injection site care and site closure cost, and must submit a report of its bond rating and financial information annually. In addition the owner or operator must either: have a bond rating test of AAA, AA, A, or BBB as issued by Standard & Poor's or Aaa, Aa, A, or Baa as issued by Moody's; or meet all of the following five financial ratio thresholds: a ratio of total liabilities to net worth less than 2.0; a ratio of current assets to current liabilities greater than 1.5; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; a ratio of current assets minus current liabilities to total assets greater than -0.1; and a net profit (revenues minus expenses) greater than 0.			
40 CFR 146.85(a)(6)(vi)	An owner or operator who is not able to meet corporate financial test criteria may arrange a corporate guarantee by demonstrating that its corporate parent meets the financial test requirements on its behalf. The parent's demonstration that it meets the financial test requirement is insufficient if it has not also guaranteed to fulfill the obligations for the owner or operator.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt "optional" program elements such as authorization by rule.

40 CFR 146.85(a)(6)(vii)	An owner or operator may obtain an insurance policy to cover the estimated costs of geologic sequestration activities requiring financial responsibility. This insurance policy must be obtained from a third party provider.			
40 CFR 146.85(b)	The requirement to maintain adequate financial responsibility and resources is directly enforceable regardless of whether the requirement is a condition of the permit.			
40 CFR 146.85(b)(1)	The owner or operator must maintain financial responsibility and resources until:			
40 CFR 146.85(b)(1)(i)	The Director receives and approves the completed post-injection site care and site closure plan; and			
40 CFR 146.85(b)(1)(ii)	The Director approves site closure.			
40 CFR 146.85(b)(2)	The owner or operator may be released from a financial instrument in the following circumstances:			
40 CFR 146.85(b)(2)(i)	The owner or operator has completed the phase of the geologic sequestration project for which the financial instrument was required and has fulfilled all its financial obligations as determined by the Director, including obtaining financial responsibility for the next phase of the GS project, if required; or			
40 CFR 146.85(b)(2)(ii)	The owner or operator has submitted a replacement financial instrument and received written approval from the Director accepting the new financial instrument and releasing the owner or operator from the previous financial instrument.			
40 CFR 146.85(c)	The owner or operator must have a detailed written estimate, in current dollars, of the cost of performing corrective action on wells in the area of review, plugging the injection well(s), post-injection site care and site closure, and emergency and remedial response.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 146.85(c)(1)	The cost estimate must be performed for each phase separately and must be based on the costs to the regulatory agency of hiring a third party to perform the required activities. A third party is a party who is not within the corporate structure of the owner or operator.			
40 CFR 146.85(c)(2)	During the active life of the geologic sequestration project, the owner or operator must adjust the cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instrument(s) used to comply with paragraph (a) of this section and provide this adjustment to the Director. The owner or operator must also provide to the Director written updates of adjustments to the cost estimate within 60 days of any amendments to the area of review and corrective action plan (40 CFR 146.84), the injection well plugging plan (146.92), the post-injection site care and site closure plan (40 CFR 146.93), and the emergency and remedial response plan (40 CFR 146.94).			
40 CFR 146.85(c)(3)	The Director must approve any decrease or increase to the initial cost estimate. During the active life of the geologic sequestration project, the owner or operator must revise the cost estimate no later than 60 days after the Director has approved the request to modify the area of review and corrective action plan (40 CFR 146.84), the injection well plugging plan (40 CFR 146.92), the post-injection site care and site closure plan (40 CFR 146.93), and the emergency and response plan (40 CFR 146.94), if the change in the plan increases the cost. If the change to the plans decreases the cost, any withdrawal of funds must be approved by the Director. Any decrease to the value of the financial assurance instrument must first be approved by the Director. The revised cost estimate must be adjusted for inflation as specified at paragraph (c)(2) of this section.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations

Citation	Summary	Citation	Summary	Difference
40 CFR 146.85(c)(4)	Whenever the current cost estimate increases to an amount greater than the face amount of a financial instrument currently in use, the owner or operator, within 60 days after the increase, must either cause the face amount to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the Director, or obtain other financial responsibility instruments to cover the increase. Whenever the current cost estimate decreases, the face amount of the financial assurance instrument may be reduced to the amount of the current cost estimate only after the owner or operator has received written approval from the Director.			
40 CFR 146.85(d)	The owner or operator must notify the Director by certified mail of adverse financial conditions such as bankruptcy that may affect the ability to carry out injection well plugging and post-injection site care and site closure.			
40 CFR 146.85(d)(1)	In the event that the owner or operator or the third party provider of a financial responsibility instrument is going through a bankruptcy, the owner or operator must notify the Director by certified mail of the commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming the owner or operator as debtor, within 10 days after commencement of the proceeding.			
40 CFR 146.85(d)(2)	A guarantor of a corporate guarantee must make such a notification to the Director if he/she is named as debtor, as required under the terms of the corporate guarantee.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.86(b)	<i>Casing and Cementing of Class VI Wells.</i>			
40 CFR 146.86(b)(1)	Casing and cement or other materials used in the construction of each Class VI well must have sufficient structural strength and be designed for the life of the geologic sequestration project. All well materials must be compatible with fluids with which the materials may be expected to come into contact and must meet or exceed standards developed for such materials by the American Petroleum Institute, ASTM International, or comparable standards acceptable to the Director. The casing and cementing program must be designed to prevent the movement of fluids into or between USDWs. In order to allow the Director to determine and specify casing and cementing requirements, the owner or operator must provide the following information:			
40 CFR 146.86(b)(1)(i)	Depth to the injection zone(s);			
40 CFR 146.86(b)(1)(ii)	Injection pressure, external pressure, internal pressure, and axial loading;			
40 CFR 146.86(b)(1)(iii)	Hole size;			
40 CFR 146.86(b)(1)(iv)	Size and grade of all casing strings (wall thickness, external diameter, nominal weight, length, joint specification, and construction material);			
40 CFR 146.86(b)(1)(v)	Corrosiveness of the carbon dioxide stream and formation fluids;			
40 CFR 146.86(b)(1)(vi)	Down-hole temperatures;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.86(b)(1)(vii)	Lithology of injection and confining zone(s);			
40 CFR 146.86(b)(1)(viii)	Type or grade of cement and cement additives; and			
40 CFR 146.86(b)(1)(ix)	Quantity, chemical composition, and temperature of the carbon dioxide stream.			
40 CFR 146.86(b)(2)	Surface casing must extend through the base of the lowermost USDW and be cemented to the surface through the use of a single or multiple strings of casing and cement.			
40 CFR 146.86(b)(3)	At least one long string casing, using a sufficient number of centralizers, must extend to the injection zone and must be cemented by circulating cement to the surface in one or more stages.			
40 CFR 146.86(b)(4)	Circulation of cement may be accomplished by staging. The Director may approve an alternative method of cementing in cases where the cement cannot be recirculated to the surface, provided the owner or operator can demonstrate by using logs that the cement does not allow fluid movement behind the well bore.			
40 CFR 146.86(b)(5)	Cement and cement additives must be compatible with the carbon dioxide stream and formation fluids and of sufficient quality and quantity to maintain integrity over the design life of the geologic sequestration project. The integrity and location of the cement shall be verified using technology capable of evaluating cement quality radially and identifying the location of channels to ensure that USDWs are not endangered.			
40 CFR 146.86(c)	<i>Tubing and packer.</i>

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.87(b)	The owner or operator must take whole cores or sidewall cores of the injection zone and confining system and formation fluid samples from the injection zone(s), and must submit to the Director a detailed report prepared by a log analyst that includes: well log analyses (including well logs), core analyses, and formation fluid sample information. The Director may accept information on cores from nearby wells if the owner or operator can demonstrate that core retrieval is not possible and that such cores are representative of conditions at the well. The Director may require the owner or operator to core other formations in the borehole.			
40 CFR 146.87(c)	The owner or operator must record the fluid temperature, pH, conductivity, reservoir pressure, and static fluid level of the injection zone(s).			
40 CFR 146.87(d)	At a minimum, the owner or operator must determine or calculate the following information concerning the injection and confining zone(s):			
40 CFR 146.87(d)(1)	Fracture pressure;			
40 CFR 146.87(d)(2)	Other physical and chemical characteristics of the injection and confining zone(s); and			
40 CFR 146.87(d)(3)	Physical and chemical characteristics of the formation fluids in the injection zone(s).			
40 CFR 146.87(e)	Upon completion, but prior to operation, the owner or operator must conduct the following tests to verify hydrogeologic characteristics of the injection zone(s):			
40 CFR 146.87(e)(1)	A pressure fall-off test; and,			
40 CFR 146.87(e)(2)	A pump test; or			
40 CFR 146.87(e)(3)	Injectivity tests.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.87(f)	The owner or operator must provide the Director with the opportunity to witness all logging and testing by this subpart. The owner or operator must submit a schedule of such activities to the Director 30 days prior to conducting the first test and submit any changes to the schedule 30 days prior to the next scheduled test.			
40 CFR 146.88(a)	40 CFR 146.88 Injection well operating requirements. Except during stimulation, the owner or operator must ensure that injection pressure does not exceed 90 percent of the fracture pressure of the injection zone(s) so as to ensure that the injection does not initiate new fractures or propagate existing fractures in the injection zone(s). In no case may injection pressure initiate fractures in the confining zone(s) or cause the movement of injection or formation fluids that endangers a USDW. Pursuant to requirements at 40 CFR 146.82(a)(9), all stimulation programs must be approved by the Director as part of the permit application and incorporated into the permit.			
40 CFR 146.88(b)	Injection between the outermost casing protecting USDWs and the well bore is prohibited.			
40 CFR 146.88(c)	The owner or operator must fill the annulus between the tubing and the long string casing with a non-corrosive fluid approved by the Director. The owner or operator must maintain on the annulus a pressure that exceeds the operating injection pressure, unless the Director determines that such requirement might harm the integrity of the well or endanger USDWs.			
40 CFR 146.88(d)	Other than during periods of well workover (maintenance) approved by the Director in which the sealed tubing-casing annulus is disassembled for maintenance or corrective procedures, the owner or operator must maintain mechanical integrity of the injection well at all times.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 146.88(e)	The owner or operator must install and use:			
40 CFR 146.88(e)(1)	Continuous recording devices to monitor: the injection pressure; the rate, volume and/or mass, and temperature of the carbon dioxide stream; and the pressure on the annulus between the tubing and the long string casing and annulus fluid volume; and			
40 CFR 146.88(e)(2)	Alarms and automatic surface shut-off systems or, at the discretion of the Director, down-hole shut-off systems (e.g., automatic shut-off, check valves) for onshore wells or, other mechanical devices that provide equivalent protection; and			
40 CFR 146.88(e)(3)	Alarms and automatic down-hole shut-off systems for wells located offshore but within State territorial waters, designed to alert the operator and shut-in the well when operating parameters such as annulus pressure, injection rate, or other parameters diverge beyond permitted ranges and/or gradients specified in the permit.			
40 CFR 146.88(f)	If a shutdown (i.e., down-hole or at the surface) is triggered or a loss of mechanical integrity is discovered, the owner or operator must immediately investigate and identify as expeditiously as possible the cause of the shutoff. If, upon such investigation, the well appears to be lacking mechanical integrity, or if monitoring required under paragraph (e) of this section otherwise indicates that the well may be lacking mechanical integrity, the owner or operator must:			
40 CFR 146.88(f)(1)	Immediately cease injection;			
40 CFR 146.88(f)(2)	Take all steps reasonably necessary to determine whether there may have been a release of the injected carbon dioxide stream or formation fluids into any unauthorized zone;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.88(f)(3)	Notify the Director within 24 hours;			
40 CFR 146.88(f)(4)	Restore and demonstrate mechanical integrity to the satisfaction of the Director prior to resuming injection; and			
40 CFR 146.88(f)(5)	Notify the Director when injection can be expected to resume.			
40 CFR 146.89(a)	40 CFR 146.89 Mechanical integrity. A Class VI well has mechanical integrity if:			
40 CFR 146.89(a)(1)	There is no significant leak in the casing, tubing, or packer; and			
40 CFR 146.89(a)(2)	There is no significant fluid movement into a USDW through channels adjacent to the injection well bore.			
40 CFR 146.89(b)	To evaluate the absence of significant leaks under paragraph (a)(1) of this section, owners or operators must, following an initial annulus pressure test, continuously monitor injection pressure, rate, injected volumes; pressure on the annulus between tubing and long-string casing; and annulus fluid volume as specified in 40 CFR 146.88 (e);			
40 CFR 146.89(c)	At least once per year, the owner or operator must use one of the following methods to determine the absence of significant fluid movement under paragraph (a)(2) of this section:			
40 CFR 146.89(c)(1)	An approved tracer survey such as an oxygen-activation log; or			
40 CFR 146.89(c)(2)	A temperature or noise log.			
40 CFR 146.89(d)	If required by the Director, at a frequency specified in the testing and monitoring plan required at 40 CFR 146.90, the owner or operator must run a casing inspection log to determine the presence or absence of corrosion in the long-string casing.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.89(e)	The Director may require any other test to evaluate mechanical integrity under paragraphs (a)(1) or (a)(2) of this section. Also, the Director may allow the use of a test to demonstrate mechanical integrity other than those listed above with the written approval of the Administrator. To obtain approval for a new mechanical integrity test, the Director must submit a written request to the Administrator setting forth the proposed test and all technical data supporting its use. The Administrator may approve the request if he or she determines that it will reliably demonstrate the mechanical integrity of wells for which its use is proposed. Any alternate method approved by the Administrator will be published in the <i>Federal Register</i> and may be used in all States in accordance with applicable State law unless its use is restricted at the time of approval by the Administrator.			
40 CFR 146.89(f)	In conducting and evaluating the tests enumerated in this section or others to be allowed by the Director, the owner or operator and the Director must apply methods and standards generally accepted in the industry. When the owner or operator reports the results of mechanical integrity tests to the Director, he/she shall include a description of the test(s) and the method(s) used. In making his/her evaluation, the Director must review monitoring and other test data submitted since the previous evaluation.			
40 CFR 146.89(g)	The Director may require additional or alternative tests if the results presented by the owner or operator under paragraphs (a) through (d) of this section are not satisfactory to the Director to demonstrate that there is no significant leak in the casing, tubing, or packer, or to demonstrate that there is no significant movement of fluid into a USDW resulting from the injection activity as stated in paragraphs (a)(1) and (2) of this section.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.90	40 CFR 146.90 Testing and monitoring requirements. The owner or operator of a Class VI well must prepare, maintain, and comply with a testing and monitoring plan to verify that the geologic sequestration project is operating as permitted and is not endangering USDWs. The requirement to maintain and implement an approved plan is directly enforceable regardless of whether the requirement is a condition of the permit. The testing and monitoring plan must be submitted with the permit application, for Director approval, and must include a description of how the owner or operator will meet the requirements of this section, including accessing sites for all necessary monitoring and testing during the life of the project. Testing and monitoring associated with geologic sequestration projects must, at a minimum, include:			
40 CFR 146.90(a)	Analysis of the carbon dioxide stream with sufficient frequency to yield data representative of its chemical and physical characteristics;			
40 CFR 146.90(b)	Installation and use, except during well workovers as defined in 40 CFR 146.88(d), of continuous recording devices to monitor injection pressure, rate, and volume; the pressure on the annulus between the tubing and the long string casing; and the annulus fluid volume added;			
40 CFR 146.90(c)	Corrosion monitoring of the well materials for loss of mass, thickness, cracking, pitting, and other signs of corrosion, which must be performed on a quarterly basis to ensure that the well components meet the minimum standards for material strength and performance set forth in 40 CFR 146.86(b), by:			
40 CFR 146.90(c)(1)	Analyzing coupons of the well construction materials placed in contact with the carbon dioxide stream; or

40 CFR 146.90(g)(2)	Indirect methods (e.g., seismic, electrical, gravity, or electromagnetic surveys and/or down-hole carbon dioxide detection tools), unless the Director determines, based on site-specific geology, that such methods are not appropriate;			
40 CFR 146.90(h)	The Director may require surface air monitoring and/or soil gas monitoring to detect movement of carbon dioxide that could endanger a USDW.			
40 CFR 146.90(h)(1)	Design of Class VI surface air and/or soil gas monitoring must be based on potential risks to USDWs within the area of review;			
40 CFR 146.90(h)(2)	The monitoring frequency and spatial distribution of surface air monitoring and/or soil gas monitoring must be decided using baseline data, and the monitoring plan must describe how the proposed monitoring will yield useful information on the area of review delineation and/or compliance with standards under 40 CFR 144.12;			
40 CFR 146.90(h)(3)	If an owner or operator demonstrates that monitoring employed under 40 CFR 98.440 to 98.449 of this chapter (Clean Air Act, 42 U.S.C. 7401 et seq.) accomplishes the goals of (h)(1) and (2) of this section, and meets the requirements pursuant to 40 CFR 146.91(c)(5), a Director that requires surface air/soil gas monitoring must approve the use of monitoring employed under 98.440 to 98.449 of this chapter. Compliance with 40 CFR 98.440 to 98.449 of this chapter pursuant to this provision is considered a condition of the Class VI permit;			
40 CFR 146.90(i)	Any additional monitoring, as required by the Director, necessary to support, upgrade, and improve computational modeling of the area of review evaluation required under 40 CFR 146.84(c) and to determine compliance with standards under 40 CFR 144.12;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.90(j)	The owner or operator shall periodically review the testing and monitoring plan to incorporate monitoring data collected under this subpart, operational data collected under 40 CFR 146.88, and the most recent area of review reevaluation performed under 40 CFR 146.84(e). In no case shall the owner or operator review the testing and monitoring plan less often than once every five years. Based on this review, the owner or operator shall submit an amended testing and monitoring plan or demonstrate to the Director that no amendment to the testing and monitoring plan is needed. Any amendments to the testing and monitoring plan must be approved by the Director, must be incorporated into the permit, and are subject to the permit modification requirements at 40 CFR 144.39 or 144.41, as appropriate. Amended plans or demonstrations shall be submitted to the Director as follows:			
40 CFR 146.90(j)(1)	Within one year of an area of review reevaluation;			
40 CFR 146.90(j)(2)	Following any significant changes to the facility, such as addition of monitoring wells or newly permitted injection wells within the area of review, on a schedule determined by the Director; or			
40 CFR 146.90(j)(3)	When required by the Director.			
40 CFR 146.90(k)	A quality assurance and surveillance plan for all testing and monitoring requirements.			
40 CFR 146.91	40 CFR 146.91 Reporting requirements. The owner or operator must, at a minimum, provide, as specified in paragraph (e) of this section, the following reports to the Director, for each permitted Class VI well:			
40 CFR 146.91(a)	Semi-annual reports containing:			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. 40 CFR 146.94(b)	If the owner or operator obtains evidence that the injected carbon dioxide stream and associated pressure front may cause an endangerment to a USDW, the owner or operator must:			
40 CFR 146.94(b)(1)	Immediately cease injection;			
40 CFR 146.94(b)(2)	Take all steps reasonably necessary to identify and characterize any release;			
40 CFR 146.94(b)(3)	Notify the Director within 24 hours; and			
40 CFR 146.94(b)(4)	Implement the emergency and remedial response plan approved by the Director.			
40 CFR 146.94(c)	The Director may allow the operator to resume injection prior to remediation if the owner or operator demonstrates that the injection operation will not endanger USDWs.			
40 CFR 146.94(d)	The owner or operator shall periodically review the emergency and remedial response plan developed under paragraph (a) of this section. In no case shall the owner or operator review the emergency and remedial response plan less often than once every five years. Based on this review, the owner or operator shall submit an amended emergency and remedial response plan or demonstrate to the Director that no amendment to the emergency and remedial response plan is needed. Any amendments to the emergency and remedial response plan must be approved by the Director, must be incorporated into the permit, and are subject to the permit modification requirements at 40 CFR 144.39 or 144.41, as appropriate. Amended plans or demonstrations shall be submitted to the Director as follows:			
40 CFR 146.94(d)(1)	Within one year of an area of review reevaluation;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations

Citation	Summary	Citation	Summary	
40 CFR 146.94(d)(2)	Following any significant changes to the facility, such as addition of injection or monitoring wells, on a schedule determined by the Director; or			
40 CFR 146.94(d)(3)	When required by the Director.			
40 CFR 146.95	40 CFR 146.95 Class VI injection depth waiver requirements. This section sets forth information which an owner or operator seeking a waiver of the Class VI injection depth requirements must submit to the Director; information the Director must consider in consultation with all affected Public Water System Supervision Directors; the procedure for Director – Regional Administrator communication and waiver issuance; and the additional requirements that apply to owners or operators of Class VI wells granted a waiver of the injection depth requirements.			
40 CFR 146.95(a)	In seeking a waiver of the requirement to inject below the lowermost USDW, the owner or operator must submit a supplemental report concurrent with permit application. The supplemental report must include the following,			
40 CFR 146.95(a)(1)	A demonstration that the injection zone(s) is/are laterally continuous, is not a USDW, and is not hydraulically connected to USDWs; does not outcrop; has adequate injectivity, volume, and sufficient porosity to safely contain the injected carbon dioxide and formation fluids; and has appropriate geochemistry.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.95(a)(2)	A demonstration that the injection zone(s) is/are bounded by laterally continuous, impermeable confining units above and below the injection zone(s) adequate to prevent fluid movement and pressure buildup outside of the injection zone(s); and that the confining unit(s) is/are free of transmissive faults and fractures. The report shall further characterize the regional fracture properties and contain a demonstration that such fractures will not interfere with injection, serve as conduits, or endanger USDWs.			
40 CFR 146.95(a)(3)	A demonstration, using computational modeling, that USDWs above and below the injection zone will not be endangered as a result of fluid movement. This modeling should be conducted in conjunction with the area of review determination, as described in 40 CFR 146.84, and is subject to requirements, as described in 40 CFR 146.84(c), and periodic reevaluation, as described in 40 CFR 146.84(e).			
40 CFR 146.95(a)(4)	A demonstration that well design and construction, in conjunction with the waiver, will ensure isolation of the injectate in lieu of requirements at 146.86(a)(1) and will meet well construction requirements in paragraph (f) of this section.			
40 CFR 146.95(a)(5)	A description of how the monitoring and testing and any additional plans will be tailored to the geologic sequestration project to ensure protection of USDWs above and below the injection zone(s), if a waiver is granted.			
40 CFR 146.95(a)(6)	Information on the location of all the public water supplies affected, reasonably likely to be affected, or served by USDWs in the area of review.			
40 CFR 146.95(a)(7)	Any other information requested by the Director to inform the Regional Administrator's decision to issue a waiver.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Citation	Summary	Citation	Summary	
40 CFR 146.95(b)	To inform the Regional Administrator's decision on whether to grant a waiver of the injection depth requirements at 40 CFR 144.6, 146.5(f), and 146.86(a)(1), the Director must submit, to the Regional Administrator, documentation of the following:			
40 CFR 146.95(b)(1)	An evaluation of the following information as it relates to siting, construction, and operation of a geologic sequestration project with a waiver:			
40 CFR 146.95(b)(1)(i)	The integrity of the upper and lower confining units;			
40 CFR 146.95(b)(1)(ii)	The suitability of the injection zone(s) (e.g., lateral continuity; lack of transmissive faults and fractures; knowledge of current or planned artificial penetrations into the injection zone(s) or formations below the injection zone);			
40 CFR 146.95(b)(1)(iii)	The potential capacity of the geologic formation(s) to sequester carbon dioxide, accounting for the availability of alternative injection sites;			
40 CFR 146.95(b)(1)(iv)	All other site characterization data, the proposed emergency and remedial response plan, and a demonstration of financial responsibility;			
40 CFR 146.95(b)(1)(v)	Community needs, demands, and supply from drinking water resources;			
40 CFR 146.95(b)(1)(vi)	Planned needs, potential and/or future use of USDWs and non-USDWs in the area;			
40 CFR 146.95(b)(1)(vii)	Planned or permitted water, hydrocarbon, or mineral resource exploitation potential of the proposed injection formation(s) and other formations both above and below the injection zone to determine if there are any plans to drill through the formation to access resources in or beneath the proposed injection zone(s)/formation(s);			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt "optional" program elements such as authorization by rule.

40 CFR 146.95(f)(1)	All requirements at 40 CFR 146.84, 146.85, 146.87, 146.88, 146.89, 146.91, 146.92, and 146.94;			
40 CFR 146.95(f)(2)	All requirements at 40 CFR 146.86 with the following modified requirements:			
40 CFR 146.95(f)(2)(i)	The owner or operator must ensure that Class VI wells with a waiver are constructed and completed to prevent movement of fluids into any unauthorized zones including USDWs, in lieu of requirements at 40 CFR 146.86(a)(1).			
40 CFR 146.95(f)(2)(ii)	The casing and cementing program must be designed to prevent the movement of fluids into any unauthorized zones including USDWs in lieu of requirements at 40 CFR 146.86(b)(1).			
40 CFR 146.95(f)(2)(iii)	The surface casing must extend through the base of the nearest USDW directly above the injection zone and be cemented to the surface; or, at the Director's discretion, another formation above the injection zone and below the nearest USDW above the injection zone.			
40 CFR 146.95(f)(3)	All requirements at 40 CFR 146.90 with the following modified requirements:			
40 CFR 146.95(f)(3)(i)	The owner or operator shall monitor the groundwater quality, geochemical changes, and pressure in the first USDWs immediately above and below the injection zone(s); and in any other formations at the discretion of the Director.			
40 CFR 146.95(f)(3)(ii)	Testing and monitoring to track the extent of the carbon dioxide plume and the presence or absence of elevated pressure (e.g., the pressure front) by using direct methods to monitor for pressure changes in the injection zone(s); and, indirect methods (e.g., seismic, electrical, gravity, or electromagnetic surveys and/or down-hole carbon dioxide detection tools), unless the Director determines, based on site-specific geology, that such methods are not appropriate.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 146.95(f)(4)	All requirements at 40 CFR 146.93 with the following, modified post-injection site care monitoring requirements:			
40 CFR 146.95(f)(4)(i)	The owner or operator shall monitor the groundwater quality, geochemical changes and pressure in the first USDWs immediately above and below the injection zone; and in any other formations at the discretion of the Director.			
40 CFR 146.95(f)(4)(ii)	Testing and monitoring to track the extent of the carbon dioxide plume and the presence or absence of elevated pressure (e.g., the pressure front) by using direct methods in the injection zone(s); and indirect methods (e.g., seismic, electrical, gravity, or electromagnetic surveys and/or down-hole carbon dioxide detection tools), unless the Director determines based on site-specific geology, that such methods are not appropriate;			
40 CFR 146.95(f)(5)	Any additional requirements requested by the Director designed to ensure protection of USDWs above and below the injection zone(s).			
40 CFR 148 - Hazardous Waste Injection Restrictions				
Subpart A - General Program Requirements				
40 CFR 148.1(a)	40 CFR 148.1 Purpose, scope and applicability. This part identifies wastes that are restricted from disposal into Class I wells and defines those circumstances under which a waste, otherwise prohibited from injection, may be injected.			
40 CFR 148.1(b)	The requirements of this part apply to owners or operators of Class I hazardous waste injection wells used to inject hazardous waste.			
40 CFR 148.1(c)	Wastes otherwise prohibited from injection may continue to be injected:			
40 CFR 148.1(c)(1)	If an extension from the effective date of a prohibition has been granted pursuant to § 148.4 with respect to such wastes; or			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 148.1(c)(2)	If an exemption from a prohibition has been granted in response to a petition filed under § 148.20 to allow injection of restricted wastes with respect to those wastes and wells covered by the exemption; or			
40 CFR 148.1(c)(3)	If the waste is generated by a conditionally exempt small quantity generator, as defined in § 261.5; or			
40 CFR 148.1(d)	Wastes that are hazardous only because they exhibit a hazardous characteristic, and which are otherwise prohibited under this part, or part 268 of this chapter, are not prohibited if the wastes:			
40 CFR 148.1(d)(1)	Are disposed into a nonhazardous or hazardous injection well as defined under 40 CFR § 146.6(a); and			
40 CFR 148.1(d)(2)	Do not exhibit any prohibited characteristic of hazardous waste identified in 40 CFR part 261, subpart C at the point of injection.			
40 CFR 148.2	40 CFR 148.2 Definitions. <i>Injection interval</i> means that part of the injection zone in which the well is screened, or in which the waste is otherwise directly emplaced.			
40 CFR 148.2	<i>Transmissive fault or fracture</i> is a fault or fracture that has sufficient permeability and vertical extent to allow fluids to move between formations.			
40 CFR 148.3	40 CFR 148.3 Dilution prohibited as a substitute for treatment. The prohibition of § 268.3 shall apply to owners or operators of Class I hazardous waste injection wells.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 148.4	40 CFR 148.4 Procedures for case-by-case extensions to an effective date. The owner or operator of a Class I hazardous waste injection well may submit an application to the Administrator for an extension of the effective date of any applicable prohibition established under subpart B of this part according to the procedures of § 268.5.			
40 CFR 148.5	40 CFR 148.5 Waste analysis. Generators of hazardous wastes that are disposed of into Class I injection wells must comply with the applicable requirements of § 268.7 (a) and (b). Owners or operators of Class I hazardous waste injection wells must comply with the applicable requirements of § 268.7(c).			
Subpart B—Prohibitions on Injection				
40 CFR 148.10(a)	40 CFR 148.10 Waste specific prohibitions—solvent wastes. Effective August 8, 1988, the spent solvent wastes specified in § 261.31 as EPA Hazardous Waste Nos. F001, F002, F003, F004, and F005 are prohibited from underground injection unless the solvent waste is a solvent-water mixture or solvent-containing sludge containing less than 1 percent total F001-F005 solvent constituents listed in Table A of this section.			
40 CFR 148.10(b)	Effective August 8, 1990, all spent F001-F005 solvent wastes containing less than 1 percent total F001-F005 solvent constituents listed in Table A of this section are prohibited from injection.			
40 CFR 148.10(c)	Effective August 8, 1990, all spent F002 and F005 wastes containing solvent constituents listed in Table B of this section are prohibited from underground injection at off-site injection facilities.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 148.20 (a)(2)(iv)	Submitted the results of pressure and radioactive tracer tests performed within one year prior to submission of the petition demonstrating the mechanical integrity of the well's long string casing, injection tube, annular seal, and bottom hole cement. In cases where the petition has not been approved or denied within one year after the initial demonstration of mechanical integrity, the Director may require the owner or operator to perform the tests again and submit the results of the new tests.			
40 CFR 148.20(b)	A demonstration under § 148.20(a)(1)(i) shall identify the strata within the injection zone which will confine fluid movement above the injection interval and include a showing that this strata is free of known transmissive faults or fractures and that there is a confining zone above the injection zone.			
40 CFR 148.20(c)	A demonstration under § 148.20(a)(1)(ii) shall identify the strata within the injection zone where waste transformation will be accomplished and include a showing that this strata is free of known transmissive faults or fractures and that there is a confining zone above the injection zone.			
40 CFR 148.20(d)	A demonstration may include a showing that:			
40 CFR 148.20(d)(1)	Treatment methods, the implementation of which shall become a condition of petition approval, will be utilized that reduce the toxicity or mobility of the wastes; or			
40 CFR 148.20(d)(2)	A monitoring plan, the implementation of which shall become a condition of petition approval, will be utilized to enhance confidence in one or more aspects of the demonstration.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 148.20(e)	Any person who has been granted an exemption pursuant to this section may submit a petition for reissuance of the exemption to include an additional restricted waste or wastes or to modify any conditions placed on the exemption by the Director. The Director shall reissue the petition if the petitioner complies with the requirements of paragraphs (a), (b) and (c) of this section.			
40 CFR 148.20(f)	Any person who has been granted an exemption pursuant to this section may submit a petition to modify an exemption to include an additional (hazardous) waste or wastes. The Director may grant the modification if he determines, to a reasonable degree of certainty, that the additional waste or wastes will behave hydraulically and chemically in a manner similar to previously included wastes and that it will not interfere with the containment capability of the injection zone.			
40 CFR 148.21(a)	40 CFR 148.21 Information to be submitted in support of petitions. Information submitted in support of § 148.20 must meet the following criteria:			
40 CFR 148.21(a)(1)	All waste analysis and any new testing performed by the petitioner shall be accurate and reproducible and performed in accordance with quality assurance standards;			
40 CFR 148.21(a)(2)	Estimation techniques shall be appropriate, and EPA-certified test protocols shall be used where available and appropriate;			
40 CFR 148.21(a)(3)	Predictive models shall have been verified and validated, shall be appropriate for the specific site, waste streams, and injection conditions of the operation, and shall be calibrated for existing sites where sufficient data are available;			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 148.21(a)(4)	An approved quality assurance and quality control plan shall address all aspects of the demonstration;			
40 CFR 148.21(a)(5)	Reasonably conservative values shall be used whenever values taken from the literature or estimated on the basis of known information are used instead of site-specific measurements; and			
40 CFR 148.21(a)(6)	An analysis shall be performed to identify and assess aspects of the demonstration that contribute significantly to uncertainty. The petitioner shall conduct a sensitivity analysis to determine the effect that significant uncertainty may contribute to the demonstration. The demonstration shall then be based on conservative assumptions identified in the analysis.			
40 CFR 148.21(b)	Any petitioner under § 148.20(a)(1)(i) shall provide sufficient site-specific information to support the demonstration, such as:			
40 CFR 148.21(b)(1)	Thickness, porosity, permeability and extent of the various strata in the injection zone;			
40 CFR 148.21(b)(2)	Thickness, porosity, permeability, extent, and continuity of the confining zone;			
40 CFR 148.21(b)(3)	Hydraulic gradient in the injection zone;			
40 CFR 148.21(b)(4)	Hydrostatic pressure in the injection zone; and			
40 CFR 148.21(b)(5)	Geochemical conditions of the site.			
40 CFR 148.21(c)	In addition to the information in § 148.21(b), any petitioner under § 148.20(a)(1)(ii) shall provide sufficient waste-specific information to ensure reasonably reliant predictions about the waste transformation. The petitioner shall provide the information necessary to support the demonstration, such as:			
40 CFR 148.21(c)(1)	Description of the chemical processes or other means that will lead to waste transformation; and			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR 148.21(c)(2)	Results of laboratory experiments verifying the waste transformation.			
40 CFR 148.22(a)	40 CFR 148.22 Requirements for petition submission, review and approval or denial. Any petition submitted to the Director pursuant to § 148.20(a) shall include the following components:			
40 CFR 148.22(a)(1)	An identification of the specific waste or wastes and the specific injection well or wells for which the demonstration will be made;			
40 CFR 148.22(a)(2)	A waste analysis to describe fully the chemical and physical characteristics of the subject wastes;			
40 CFR 148.22(a)(3)	Such additional information as is required by the Director to support the petition under §§ 148.20 and 148.21; and			
40 CFR 148.22(a)(4)	This statement signed by the petitioner or an authorized representative: I certify under penalty of law that I have personally examined and am familiar with the information submitted in this petition and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.			
40 CFR 148.22.(b)	The Director shall provide public notice and an opportunity for public comment in accordance with the procedures in § 124.10 of the intent to approve or deny a petition. The final decision on a petition will be published in the Federal Register.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

40 CFR Parts 124, 144, 146, and 148 vs.		UIC Regulations		
Code of Federal Regulations		Current		Difference
Citation	Summary	Citation	Summary	
40 CFR 148.22(c)	If an exemption is granted it will apply only to the underground injection of the specific restricted waste or wastes identified in the petition into a Class I hazardous waste injection well or wells specifically identified in the petition (unless the exemption is modified or reissued pursuant to § 148.20(e) or (f).			
40 CFR 148.22(d)	Upon request by any petitioner who obtains an exemption for a well under this subpart, the Director shall initiate and reasonably expedite the necessary procedures to issue or reissue a permit or permits for the hazardous waste well or wells covered by the exemption for a term not to exceed ten years.			
40 CFR 148.23(a)	40 CFR 148.23 Review of exemptions granted pursuant to a petition. When considering whether to reissue a permit for the operation of a Class I hazardous waste injection well, the Director shall review any petition filed pursuant to § 148.20 and require a new demonstration if information shows that the basis for granting the exemption may no longer be valid.			
40 CFR 148.23(b)	Whenever the Director determines that the basis for approval of a petition may no longer be valid, the Director shall require a new demonstration in accordance with § 148.20.			
40 CFR 148.24(a)	40 CFR 148.24 Termination of approved petition The Director may terminate an exemption granted under § 148.20 for the following causes:			
40 CFR 148.24(a)(1)	Noncompliance by the petitioner with any condition of the exemption;			
40 CFR 148.24(a)(2)	The petitioner's failure in the petition or during the review and approval to disclose fully all relevant facts, or the petitioner's misrepresentation of any relevant facts at any time; or			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Code of Federal Regulations		Current		Statutes and Regulations
Citation	Summary	Citation	Summary	Difference
40 CFR 148.24(a)(3)	A determination that new information shows that the basis for approval of the petition is no longer valid.			
40 CFR 148.24(b)	The Director shall terminate an exemption granted under § 148.20 for the following causes:			
40 CFR 148.24(b)(1)	The petitioner's willful withholding during the review and approval of the petition of facts directly and materially relevant to the Director's decision on the petition;			
40 CFR 148.24(b)(2)	A determination that there has been migration from the injection zone or the well that is not in accordance with the terms of the exemption, except that the Director may at his discretion decide not to terminate where:			
40 CFR 148.24(b)(2)(i)	The migration resulted from a mechanical failure of the well that can be corrected promptly through a repair to the injection well itself or from an undetected well or conduit that can be plugged promptly; and			
40 CFR 148.24(b)(2)(ii)	The requirements of § 146.67(i) are satisfied.			
40 CFR 148.24(c)	The Director shall follow the procedures in § 124.5 in terminating any exemption under this section.			

* Section 145.11 does not specify that States must have legal authority to implement the shaded provisions, but some of these provisions may be necessary to clarify State program requirements. Other shaded provisions describe applicable requirements if States choose to adopt “optional” program elements such as authorization by rule.

Class II 1425 Guidance 19 Crosswalk Template

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
1421 (b)(1)(A)	5.1 a/5.2	Section 1421(b)(1)(A) requires that an approvable State program prohibit any underground injection in such State which is not authorized by permit or rule. The question of whether a State program prohibits unauthorized Class II injections is a function of the State's statutory and regulatory authority. A determination of whether the State program meets this condition should be made from a review of the coverage and scope of the program, the statement of legal authority submitted by the State, and of the statutes and regulations themselves. One important consideration is whether the State has an appropriate formal mechanism for modifying permits in cases where the operation has undergone significant change.	n/a	n/a			

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
1421(b)(1)(B)	5.1 b/5.3	<p>Section 1421(b)(1)(B) requires that an approvable State program shall require that:</p> <p>1. the applicant for a permit must satisfy the State that the underground injection will not endanger drinking water sources; and</p> <p>2 . no rule may be promulgated which authorizes any underground injection which endangers drinking water sources. The determination of whether a State program is adequate in requiring that the applicant demonstrate that the proposed injection will not endanger drinking water sources turns on two elements: (1) whether the State program places on the applicant the burden of making the requisite showing; and</p> <p>(2) the extent of the information the applicant is required to provide as a basis for the State agency's decision. Whether the burden of making the requisite showing is on the applicant should be determined from the State's description of its permitting process. If the necessary information is available in State files, the Director need not require it to be submitted again. However, as a matter of principle, the applicant should not escape ultimate responsibility for assuring that the information about his operation is accurate and available. One consideration in this regard is whether the well operator has a responsibility to inform the permitting authority about any material change in his operation, or any pertinent information acquired since the permit application was made.</p> <p>With regard to the extent of the information to be considered by the Director, the State program should require an application containing sufficiently detailed information to make a knowledgeable decision to grant or deny the permit. Such information should include:</p>	n/a	Site Background			
			n/a	Site Background			
			n/a	Site Background			
			n/a	Site Background			
			5.3 a	AoR Map	A map showing the area of review and identifying all wells of public record penetrating the injection interval		
			5.3 b	AoR Evaluation	A tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data should include a description of each well's type, construction, date of drilling, location, depth, record of plugging and/or completion and any other information the Director may require.		
			5.3 c	Operations Monitoring	Data on the proposed operation, including: 1.) average and maximum daily rate and volume of fluids to be injected, 2.) average and maximum injection pressure, and 3.) source, and an appropriate analysis of injection fluid if other than produced water, and compatibility with the receiving formation.		
			5.3 d	Confining and Injection Formations	Appropriate geological data on the injection zone and confining zones including lithologic description, geological name, thickness, and depth		
			n/a	Other Formations			
			5.3 e	USDWs	Geologic name, and depth to bottom of all underground sources of drinking water which may be affected by the injection		
			5.3 f	Construction Plans	Schematic drawings of the surface and subsurface construction details of the system		
			5.3 g	Injection Operations	Proposed stimulation program		
			5.3 h	Well Logs	All available logging and testing data on the well		
			5.3 i	Corrective Action	The need for corrective action on wells penetrating the injection zone in the Area of Review		
			n/a	Plugging and Abandonment Plan			

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
1421(B)(1)(C)	5.1 c/5.4	Section 1421(b)(1)(C) requires that an approvable State program include inspection, monitoring, recordkeeping, and reporting requirements. This section of the SDWA requires that an approvable State program contain elements for inspection, monitoring, recordkeeping and reporting. The adequacy of the State program in these respects may be assessed with the use of the following criteria.	5.4 a	Effective Inspection	An approvable State program is expected to have an effective system of field inspection which will provide for: 1. Inspections of injection facilities, wells, and nearby producing wells; and 2. The presence of qualified State inspectors to witness mechanical integrity tests, corrective action operations, and plugging procedures.		
			5.4 a	Inspector Witnessed MIT	An adequate program should ensure that, at a minimum, 25% of all mechanical integrity tests performed each year will be witnessed by a qualified State inspector.		
			5.4b1	M, R&R: Authority	The Director should have the authority to sample injected fluids at any time during injection operation.		
			5.4b2	M, R&R: Operations Monitoring	The operator should be required to monitor the injection pressure and injection rate of each injection well at least on a monthly basis with the results reported annually.		
			5.4 b3	M,R&R: Noncompliance Notification	The Director should require prompt notice of mechanical failure or downhole problems in injection wells.		
			5.4 b4	M,R&R: MI Record Retention	The State should assure retention and availability of all monitoring records from one mechanical integrity test to the next (i.e., 5 years).		
			n/a	M, R&R: Operator Annual Report			
			n/a	M, R&R: State Non-compliance and Program Reporting			
			n/a	M R&R: Public Notice			
			n/a	M R&R: enforcement			

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
1421 (b)(1)(D)	5.1 d/5.5	1421(b)(1)(D) requires that an approvable State program apply to: (1) underground injections by Federal agencies; and (2) underground injections by any other person, whether or not occurring on property owned or leased by the United States. An approvable State program must demonstrate the State's authority to regulate injection activities by Federal agencies and by any other person on property owned or leased by the United States. The adequacy of the State's authority in these regards may be assessed on the basis of the program description and statement of legal authority submitted by the State.					
1425(a)	5.1e/5.6		5.6 a	Permitting Process	Section 3.3 b of the Program Description outlines the major elements of the permitting process. The listing of these considerations should not be viewed as Federally imposed minimum policy, but rather as an outline of the information which will be necessary for EPA to evaluate the effectiveness of the State's permitting process.		
			5.6 b1	Siting	Requirements should be designed to assure that disposal zones are hydraulically isolated from USDWs. Such isolation may be shown by the applicant, or data, on file with the State which would be analyzed by qualified State Staff		
			5.6 b2a	Construction to Prevent Fluid Migration	All newly drilled Class II wells must be cased and cemented to prevent movement of fluids into USDWs		
			5.6 b2a	Criteria for Casing and Cementing Requirements	Casing and cementing requirements based on: the depth to the base of the USDW, the nature of the fluids to be injected, and the hydrologic relationship between the injection zone and the base of the USDW		
			5.6 b2b	MI Demonstration for Converted Wells	All newly converted Class II wells are required to demonstrate MI		
			n/a	Well Construction Monitoring			

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
			5.6 b3a	Operations Criteria	Adequate operating requirements should establish a maximum injection pressure for a well which assures that the pressure in the injection during injection does not initiate new fractures or propagate existing fractures in the confining zone. Limitations on injection pressure should also preclude the injection from causing movement of fluids into a USDW.		
			5.6 b3a	Pressure Limitation	Acceptable methods for establishing pressure limitations: calculated fracture gradients, injectivity tests to establish fracture pressure, or other compelling geologic, hydrologic, or engineering data		
			5.6 b3b	Detect/Remedy	An effective State program should have the demonstrated ability to detect and remedy system failures discovered during routine operation or monitoring so as to mitigate endangerment to USDWs		
			5.6 b4a	Plugging and Abandonment Elements	Plugging and Abandonment requirements should be reviewed for the presence of the following elements: A. Appropriate mechanisms available in the State program to ensure the proper plugging of wells upon abandonment		
			5.6 b4b	Plugging and Abandonment Goals	B. All Class II wells are required upon abandonment to be plugged in a manner which will not allow the movement of fluids into or between USDWs		
			5.6 b4c	Financial Responsibility Instrument	C. Operators are required to maintain financial responsibility in some form for the plugging of their injection wells		
			5.6 b5	Area of Review	An effective State program is expected to incorporate the concept of an area of review defined as a radius of not less than ¼ mile from the well, field, or project		

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
			5.6 b5	Area of Review ZEI	A state program may substitute a concept of a zone of endangering influence (ZEI). The ZEI should be determined for the estimated life of the well, field, or project through the use of appropriate calculation, formula, or mathematical model that takes the relevant geologic, hydrologic, engineering, and operational features of the well, field, or project into account.		
			5.6 b6	Corrective Action in AoR	An approvable State program is expected to include the authority to require the operator to take corrective action on wells within the AoR or ZEI		
			5.6 b6a	Corrective Actions	A corrective action may include any of the following types of requirements: recementing; workover; reconditioning; or plugging or replugging.		
			5.6 b6b	Discretionary Corrective Action Requirements	A State program may provide the Director the discretion to specify the following types of requirements in lieu of immediate corrective action: permit conditions which assure a negative hydraulic gradient at the base of the USDW at the well in question; monitoring program (i.e. monitoring wells completed to the base of the USDW within the ZEI); or periodic testing to determine if fluid movement outside the injection interval at other wells with the AoR. If monitoring indicates potential endangerment of any USDW, corrective action must be taken.		
			5.6 b6c	Director's Discretion	In cases where Director has demonstrable knowledge which assures that wells within the ZEI or AoR will not serve as conduits for fluid migration into a USDW, the Director may have the discretion to permit an operation without requiring corrective actions.		
			5.6 b7	MI Demonstration Requirement	An approvable state program is expected to require the operator to demonstrate the MI of a new injection well prior to operation and of all injection wells periodically; at least once every five years.		

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
			5.6 b7a	MI Definition	An injection well has MI if: i. there is no leak in the casing, tubing, or packer; and ii. There is no significant fluid movement into a USDW through vertical channels adjacent to the wellbore.		
			5.6 b7b	MI Test Details	Tests to demonstrate the absence of significant leaks: a pressure test with liquid or gas; the monitoring of annulus pressure in those wells injecting at a positive pressure, following an initial pressure test; or all other tests or combinations considered effective by the Director.		
			5.6 b7c	MI Test Details	Tests to demonstrate the absence of fluid movement in vertical channels adjacent to the wellbore: cementing records; tracer surveys; noise logs; temperature surveys; or any other test or combination of test considered effective by the Director		
			5.6 b7d	Alternate MITs	If the state allows or specifies alternative tests, the program description should supply sufficient information so that the usefulness and reliability of such tests in the proposed circumstance may be assessed.		
			5.6 c	Surveillance	See section 5.4		
			5.6 d	Enforcement	In assessing a State's enforcement program, EPA will consider not whether a State has all or any particular enforcement tools but whether the State's program, taken as a whole, represents an effective enforcement effort.		
			5.6 e	Public Participation	One factor to be used by EPA in assessing the "effectiveness" of a State program is the degree to which it assures the public an opportunity to participate in major regulatory decisions. It is assumed that most States already have legislation that governs public participation in State decision-making and defines such processes as appeals, etc.		
			5.6 e1a	Public Notice	The State may give public notice or it may require the applicant to give notice		

SDWA	Section	Guidance 19 Background	Subsection	Subsection Header	Guidance 19 Criteria	State Regulatory Language and Reference	Effectiveness Determination (has the state addressed the criteria effectively, y/n; and explanation if necessary)
			5.6 e1b	Posting Notice	The method of notice should be adequate to bring the matter to the attention of interested parties and in particular, the public in the area of the proposed injection. This may involve one or more of the following: i. Posting; ii. Publication in an official state register; iii. Publication in a local newspaper; iv. Mailing to a list of interested persons; or v. Any other effective method that achieves the objective.		
			5.6 e1c	Notice Content	An adequate notice should: i. Provide an adequate description of the proposed action; ii. Identify where an interested party may obtain additional information. This location should be reasonably accessible and convenient for interested person; iii. State how a public hearing may be requested; and iv. Allow for a comment period of at least 15 days.		
			5.6 e2	Public Hearing	The State program should provide opportunity for a public hearing if the Director finds, based upon requests, a significant degree of public interest. A. The Director may hold a hearing of his own motion and give notice of such hearing with the notice of the applications B. If a public hearing is decided upon during the comment period, notice of public hearing should be scheduled no sooner than 15 days after notice.		
			5.6 e3	Response to Comments	The final State action on the permit application should contain a “response to comments”, which summarizes the substantive comments received and the disposition of the comments
