FINAL ANALYTICAL RESULTS: Sample Date 6/30/2003 Sample Depth 12 ft bgs

TPH, BTEX and Chloride laboratory test results completed by using an approved lab and testing procedures pursuant to NMOCD guidelines.

General Description of Remedial Action: This box has been the site of several historical leaks. The location was delineated vertically with a backhoe to a depth of 12 ft. TPH and chloride impact did not sufficiently decline with depth. On 3/18/2004, a soil bore was initiated at this junction and was advanced to a depth of 67 ft where moisture was encountered. Although TPH concentrations at this depth met NMOCD guidelines, chloride impact did not exhibit a decline with depth (see graph). The bore hole was plugged with bentonite at 57-67 ft and the remainder of the hole was backfilled with drill cuttings. The backhoe trench was backfilled with clean imported soil and a new watertight junction box has been built ft <direction> from this site.
