FINAL ANALYTICAL RESULTS: Sample Date 05/02/2001 Sample Depth 15'

Procure 5-point composite sample of bottom and 4-point composite sample of sidewalls. TPH, BTEX and Chloride laboratory test results completed by using an approved lab and testing procedures pursuant to NMOCD guidelines.

General Description of Remedial Action: Delineated vertical and lateral extent.

Performed soil boring, which demonstrated chlorides diminished from 6000 ppm at 10' bgs to 2000 ppm at 15' bgs. These results indicate impact probably stopped before reaching groundwater. Installed a compacted clay barrier to vertical transmissivity and water tight junction box. High impact soil was hauled to permitted disposal facility and remaining soil was blended with fresh soil and used for backfill.
