rock layer at 6' bgs. Completed soil boring on 1/23/02, which demonstrated impact stopped

before reaching groundwater. Boring results also indicated impact did not extend below hard

rock layer at 6'. Boring results indicate impact stopped between 6' and 10' bgs, well above the

ground water. Delineated lateral extent, installed compacted clay barrier to inhibit vertical

transmissivity and water proof junction box. Backfilled with blended soil to below NMOCD TPH

guidelines. Natural attenuation will remediate the remaining hydrocarbons.
