FINAL ANALYTICAL RESULTS: Sample Date 7/10/2002 Sample Depth 20 ft

Procure 5-point composite sample of bottom and 4-point composite sample of sidewalls. TPH, BTEX and Chloride laboratory test results completed by using an approved lab and testing procedures pursuant to NMOCD guidelines.

General Description of Remedial Action: Soil directly below the box was consistently impacted by TPH down to 17' BGS with 1380 ppm; impact subsided below this depth. Chloride: were found to affect the soil below the entire barren area surrounding the box. Groundwater at this location was presumed to occur at 56' BGS, but a soil bore conducted on 6/25/02 found no water and red bed was encountered around 65' BGS. The TPH impacted soil was removed and disposed of at a permitted facility producing a 20' x 20' x 20' excavation which yielded a bottle composite field test of 44 ppm TPH. This hole was then backfilled with the blended soil that field tested 218 ppm TPH and 1405 ppm chlorides. The top 4' of the 82' x 112' area was removed and a 10-12" clay liner was installed at 4' BGS to inhibit further downward migration of chlorides. The remaining chloride-affected soil was blended with clean soil and placed on top of the clay liner. This location is no longer a junction and a box is not required. Natural attenuation is expected to remediate any remaining hydrocarbons.
