**FINAL ANALYTICAL RESULTS:** Sample Date 6/30/2003, 3/17/2004 Sample Depth 12 ft, 70 ft

TPH, BTEX and Chloride laboratory test results completed by using an approved lab and testing procedures pursuant to NMOCD guidelines.

**General Description of Remedial Action:** This box has been the site of several

historical leaks. The location was delineated vertically with a backhoe to a depth of 12 ft.

Chloride impact did not sufficiently decline with depth. On 3/17/2004, a soil bore was

initiated at this junction and was advanced to a depth of 70 ft and moisture was

encountered at about 67 ft. Although TPH concentrations met NMOCD guidelines, chloride

impact did not exhibit a decline with depth (see graph). The bore hole was plugged with

bentonite at 60-70 ft and the remainder of the hole was backfilled with drill cuttings. The

backhoe trench was backfilled with clean imported soil. A new junction box was not needed

here anymore and the new replacement pipeline was plumbed straight through.

**ADDITIONAL EVALUATION IS MEDIUM PRIORITY.**
