**RE: FINAL SAN JUAN BASIN PIT CLOSURE REPORTS**

Dear Ms. Ebert:

The New Mexico Oil Conservation Division (OCD) has reviewed Conoco Inc's (Conoco) February 14, 2000 "CONOCO GROUNDWATER REPORT SUMMARY" and accompanying pit closure reports which were submitted on behalf of Conoco by their consultant On Site Technologies, Ltd. These documents contain the results of annual ground water monitoring at a number of former unlined pit sites in the San Juan Basin and requests closure approval of site remediation and monitoring actions at 5 sites.

Below is the OCD's review of the above referenced documents:

- A. The soil and ground water remedial activities conducted at the sites listed below are satisfactory and the OCD **approves** of final site closure on the condition that all site monitor wells be plugged and abandoned by pulling the casing and grouting the annulus from the base to the surface with a cement grout containing 3-5% bentonite. Please be advised that OCD approval does not relieve Conoco of responsibility if remaining contaminants pose a future threat to ground water, surface water, human health or the environment. In addition, OCD approval does not relieve Conoco of responsibility for compliance with any other federal, state or local laws and regulations.

1. Shephard & Kelsey #1E (Separator pit) Unit D, Sec. 29, T29N, R11W.

B. The ground water remedial actions at the sites listed below appear satisfactory. However, the pit closure forms for these sites do not contain any information on the soil remediation actions, the disposal of contaminated soils generated at the sites, land type, nor the exact location of the pit on the site. Therefore, final closure approval for these sites is **denied**. The OCD will reconsider issuing closure approval of these sites once Conoco submits completed OCD "Pit Remediation and Closure Report" forms for each site which includes the above information.

**RE: ANNUAL PIT CLOSURE SUMMARY AND GROUND WATER IMPACTS**

Dear Mr. Goates:

The New Mexico Oil Conservation Division (OCD) has reviewed Conoco's undated "ANNUAL PIT CLOSURES AND GROUND WATER IMPACT UPDATES, STATE OF NEW MEXICO, 1996" which was received by the OCD on May 20, 1997. This document contains the results of Conoco's recent work on the investigation and remediation of contamination from unlined production pits in the San Juan Basin. The document also contains Conoco's recommendations for future remedial actions.

The recommendations as contained in the above referenced document are approved with the following conditions:

1. **General Conditions**

- a. The ground water reports for each site do not include the cations/anions, metals and PAH ground water sample analyses that were supposed to be taken at each site. The OCD requires that Conoco conduct this sampling pursuant to Conoco's March 24, 1995 San Juan Basin ground water assessment plan which was conditionally approved by the OCD on April 5, 1995. The results of these analyses will be included in subsequent annual reports.

Mr. Neil Goates  
July 28, 1997  
Page 2

- b. Upon review of Conoco's file, the OCD noted that Conoco does not have a long term ground water monitoring plan nor a ground water remediation plan for pit closure sites with ground water contamination. The OCD requires that Conoco submit a comprehensive ground water remediation plan and long term ground water monitoring plan to the OCD by October 10, 1997.
  - c. All future annual ground water reports will be submitted to the OCD by March 1 of each respective year. The ground water reports will present the information on each site as a separate case. Each ground water case report will contain:
    - I. A brief summary of all ground water remediation and monitoring activities which occurred during the prior calendar year.
    - ii. Summary tables of all past and present ground water quality sampling analytical results and copies of the laboratory analytical data sheets for samples taken during the last year.
    - iii. A site map showing the locations of relevant site features (ie. wellhead, pit, monitor wells, etc.)
    - iv. A quarterly ground water potentiometric map using the water table elevation in all site monitor wells.
    - v. A geologic log and well completion diagram for each monitor well.
2. Farmington Com #1, Farmington C Com #1, Farmington B Com #1E and Farmington B Com #1

Due to the potential for public impacts from soil and ground water contamination at these sites, the OCD requires that Conoco conduct the following actions:

- a. By August 29, 1997, Conoco will complete the remediation of contaminated soils at each site according to Conoco's previously approved pit closure plan. Final reports containing the results of the soil remedial actions will be submitted to the OCD by September 26, 1997.
- b. By August 29, 1997, Conoco will submit a ground water remediation work plan for each site to the OCD. The work plan will include information on how Conoco plans to remediate the contaminated ground water, a long term ground water monitoring plan, an implementation schedule and, if not already completed, a plan to define the full extent of ground water contamination at each site.

Mr. Neil Goates  
July 28, 1997  
Page 3

3. Shepherd & Kelsey #1E (Separator pit)

The report recommends no further actions except additional ground water monitoring for this site. However, a review of the report data shows that the extent of ground water contamination at this site has not been determined. Therefore, the OCD requires that Conoco investigate the extent of ground water contamination pursuant to Conoco's March 24, 1995 San Juan Basin ground water assessment plan which was conditionally approved by the OCD on April 5, 1995.

To simplify the approval process for both Conoco and OCD, the OCD requests that future annual reports only address the ongoing actions related to ground water investigation, remediation and monitoring. Pit closure actions involving only contaminated soils need to be reported to the OCD only upon completion of all pit soil remedial actions when Conoco submits a final pit closure report to the OCD for approval. Pit closure actions involving only contaminated soils do not need to be reported to the OCD on an interim basis.

Please be advised that OCD approval does not relieve Conoco of liability if remaining contaminants pose a future threat to surface water, ground water, human health or the environment. In addition, OCD approval does not relieve Conoco of responsibility for any federal, state, tribal, or local laws and/or regulations.

If you have any questions, please contact me at (505) 827-7154.

Sincerely,

William C. Olson
