Please be advised that OCD approval does not relieve EPFS of liability if remaining contaminants are found to pose a future threat to surface water, ground water, human health or the environment. In addition, OCD approval does not relieve EPFS of responsibility for compliance with any other federal, state or local laws and/or regulations.

B. Ground waters at the sites listed below are contaminated with petroleum related constituents in excess of New Mexico Water Quality Control Commission ground water standards. At these sites, subsequent closure monitoring was not performed or the extent of ground water contamination at the sites was not been determined. Therefore, approval of these pit closure forms is **denied**. The OCD requests that, as necessary, EPFS investigate the extent of contamination, perform subsequent closure monitoring and/or remediate contaminated ground water pursuant to EPFS's November 29, 1995 ground water investigation/remediation work plan which was approved by the OCD on November 30, 1995.

1. 2C-22 #3 Line Drip (Drip pit)	Unit G, Sec. 13, T24N, R06W.

RE: Production Pit Closure Submittal

Dear Mr. Olson:

Enclosed herein are data packages for work completed at El Paso Field Services (EPFS) production pit locations where shallow groundwater was encountered during closure operations. The data included within indicate that these sites merit closure per the New Mexico Oil Conservation Division's (NMOCD) Vulnerable Area Orders and EPFS's closure plan submitted to the NMOCD. In front of each data package is a site specific checklist that indicates the work completed at each location. Each checklist is followed by a short summary of the activities and results of data collected to support closure.

Sincerely,

El Paso Field Services

Sandra Miller
