## Bruce,

The NMOCD has reviewed the Remediation Plan for **Northeast Drinkard Unit #128**, <u>**1RP-5591**</u>. This remediation plan is denied for the following reason:

• Horizontal and vertical delineation have not been completed. In the area of the pasture, the flow lines are not permanent structures and can be maneuvered to allow for larger equipment such as backhoes and hydro-vacs, and other tools.

The NMOCD does not oppose the use of Microblaze as a form of remediation, but a confirmation sampling plan must be included in the remediation plan to confirm the soil is being remediated effectively.

Please let me know if you have any questions.

Thank you,

## **Cristina Eads**

Environmental Bureau EMNRD – Oil Conservation Division 1220 South St. Francis Drive Santa Fe, New Mexico 87505 505.476.3084 email: <u>Cristina.Eads@state.nm.us</u>

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
