Good Morning Christina,

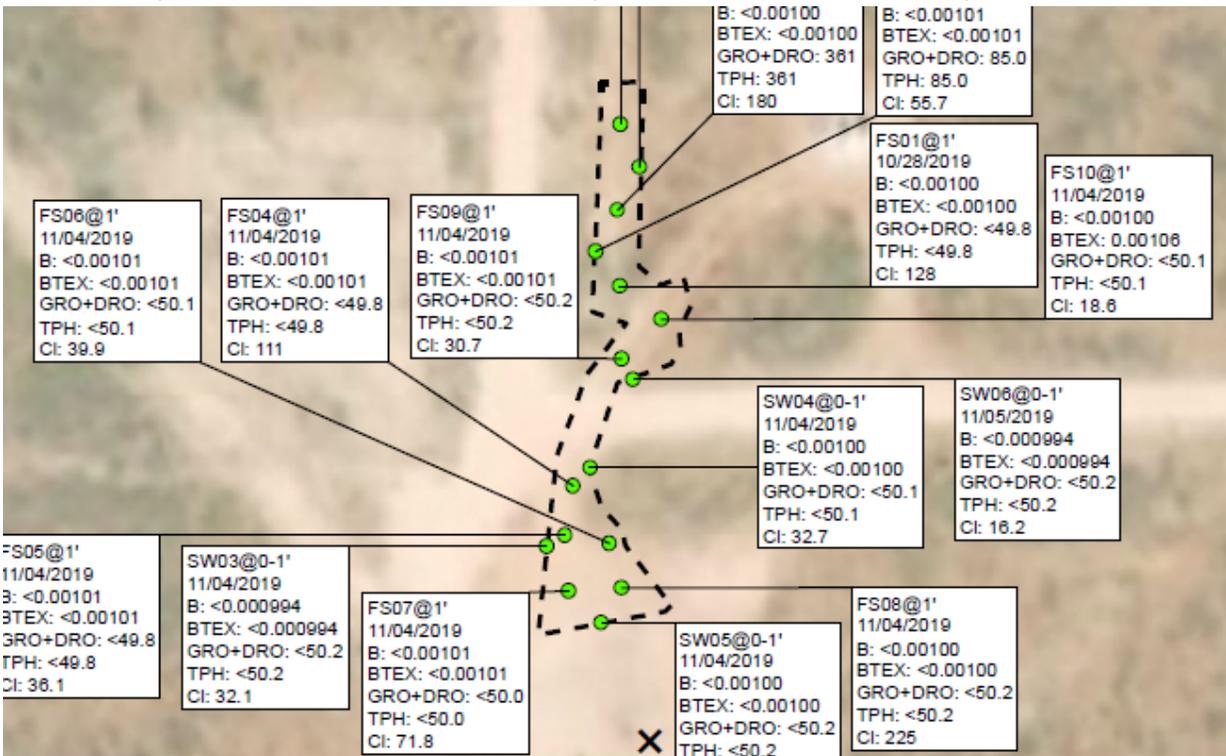

All areas inside the dashed lines, including the road area, were excavated to 1' bgs. The samples in the figure represent 5-point composite samples and their locations are representative of the 200 ft2 area they were collected. The sample locations are sited on the figure in the approximate center of the areas the 5-point composites represent. In this instance, sidewall sample SW06 was collected along the eastern sidewall including the eastern portion of the excavation in the road. Sidewall samples SW01 and SW03 were collected along the western sidewall of the excavation and contain aliquot samples from the road area. Similarly, composite floor samples FS04 and FS09 contained samples collected from portions of the road area to confirm impacted material from the floor had been removed. Let me know if you need anything else. --Kyle

Kyle,

I am currently reviewing this deferral request. It was submitted via the fee portal on 12/5/19. It appears that a sample wasn't taken from the road area (see snip below). Was the road sampled or dug up at all? Based on the pictures, it doesn't look like it was sampled, but I wanted to check with you first.

Thanks,

**Cristina Eads**
