Christina,

The affected area is a pipeline right-of-way (ROW) with 8 pipelines in it as shown on the snapshots below with a blue dot. It is a ROW area that will not be reclaimed until the pipelines are abandoned; therefore we did not apply the reclamation standard to the delineation, but instead the Table 1 Closure Criteria as defined by the site characterization. Let me know if you need any more information. Thanks and have a good weekend. --Kyle

Hi Kyle,

See the image below.

I am reviewing the Muy Wayno Frac Pond site, nAB1929060813 (2RP-5674). The highlighted portion of this image, does this area have any buried or fixed structures preventing an excavation from taking place? I can't tell if this is a road or some sort of right of way. In the closure report, there are 2 samples that are below closure criteria, but exceed chloride concentrations for reclamation of the top 4 feet, which must take place after remediation if it is not on an active site. I wanted to ask before I provided a determination.

Thanks,

Cristina Eads
