Cause of Release

On 1/27/2019 a hydrovac truck was cleaning out a tank on the West Escavada 302H when the driver inadvertently opened the back hatch at released 8 bbls of produced water and oil from the truck. Clean up activities have taken place and confirmation sampling occurred on February 1<sup>st</sup> 2019.

### Smith, Cory, EMNRD

From: Sent: To: Cc: Subject: Smith, Cory, EMNRD Monday, May 20, 2019 9:32 AM Chad Snell James McDaniel; John Dockter RE: WEU 302H confirmation sampling

Chad,

OCD received the Closure request for the W. Escavada Unit #302H. The report was marked as a Closure however, Enduring is really requested a deferral request as the elevated chlorides in the top 4' are above the 600mg/kg standard however since they are located on the well site they will be remediated at P&A as indicated in the closure.

There is no further action at this site until P&A or earlier if the area is no longer in use. The Incident will remain open until remediation is completed.

# Site Assessment/Characterization

This information must be provided to the appropriate district office no later than 90 days after the release discovery date.

What is the shallowest depth to groundwater beneath the area affected by the release?		
Did this release impact groundwater or surface water?	🗌 Yes 🛛 No	
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	🗌 Yes 🛛 No	
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	🗌 Yes 🛛 No	
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	🗌 Yes 🛛 No	
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	🗌 Yes 🛛 No	
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	🗋 Yes 🛛 No	
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	🗌 Yes 🖾 No	
Are the lateral extents of the release within 300 feet of a wetland?	🗌 Yes 🛛 No	
Are the lateral extents of the release overlying a subsurface mine?	🗌 Yes 🛛 No	
Are the lateral extents of the release overlying an unstable area such as karst geology?	🗋 Yes 🛛 No	
Are the lateral extents of the release within a 100-year floodplain?	🗌 Yes 🛛 No	
Did the release impact areas not on an exploration, development, production, or storage site?	🗌 Yes 🛛 No	

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

Characterization Report Checklist: Each of the following items must be included in the report.

- Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- Field data
- Data table of soil contaminant concentration data
- Depth to water determination
- Determination of water sources and significant watercourses within <sup>1</sup>/<sub>2</sub>-mile of the lateral extents of the release
- Boring or excavation logs
- Photographs including date and GIS information
- Topographic/Aerial maps
- Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters. # **Remediation Plan**

Remediation Plan Checklist: Each of the following items must be included in the plan.
<ul> <li>Detailed description of proposed remediation technique</li> <li>Scaled sitemap with GPS coordinates showing delineation points</li> <li>Estimated volume of material to be remediated</li> <li>Closure criteria is to Table 1 specifications subject to 19 15 29 12(C)(4) NMAC</li> </ul>
Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)
<b>Deferral Requests Only:</b> Each of the following items must be confirmed as part of any request for deferral of remediation.
Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
Extents of contamination must be fully delineated.
Contamination does not cause an imminent risk to human health, the environment, or groundwater.
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. # Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

Closure Report Attachment Checklist: Each of the following items must be included in the closure report.

A scaled site and sampling diagram as described in 19.15.29.11 NMAC

Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)

Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)

Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

#### West Escavada 302H Remediation Narrative

#### 1/27/2019

A hydrovac truck was on site cleaning out a tank, when the driver of the truck inadvertently opened the back hatch. This caused a release of 8 bbls of produced water and oil onto the pad. The level indicator on the hydrovac truck had shown a level of 8 bbls just before the release occurred. Enduring Resources personnel went out onto site and accessed the release. The hydrovac truck sucked up standing pools of liquid shortly after. Remaining clean-up activities were scheduled for January the 30<sup>th</sup> 2019.

### 1/30/2019

Clean-up activities took place using a backhoe, that scraped up remaining impacted soil. Approximately 9 yards of soil was removed from impacted area. The NMOCD was notified via email (see attached *"Email Notification"*) that confirmation sampling would take place on February 1<sup>st</sup> 2019 at 9:00am.

### 2/1/2019

Sampling activities took place with no representative of the NMOCD onsite to witness. The impacted area was broken up into Six different sections, where a 5-point composite sample was taken from each section. Each Section was broken up into 20 Ft. by 10 Ft. sections due to the 200 square foot rule (see attached *"Scaled Map"* for reference). Samples were later sent in for analysis for BTEX, TPH (GRO/DRO/ORO), and Chlorides.

#### 2/5/2019

Returned results confirmed that no further excavation would be needed at this time due to the site being ranked with ground water being over 100 Ft. from surface (see attached *"Lab Analysis"*). The site was ranked by a cathodic that was drilled at a nearby location proving ground water to be over 100 Ft. from surface (see attached *"Ground bed drilling log"*).

There are areas of the release that did not meet the 600 mg/kg reclamation requirement, however these areas are currently in use for the exploration and production of oil and gas. Once the areas are no longer in use or at final abandon, Enduring Resources will return to the impacted areas and ensure area is remediated per 19.15.29 NMAC.

### Cory,

That was the level in the truck when the back hatch was accidently open. The crew had just began work and the level indicator on the truck showed 8 bbls.

Cory,

It happened on Sunday January 27, 2019. A hydrovac truck inadvertently opened back hatch causing the release, which was verified to have 8bbls in the truck. The Initial C-141 was submitted today.
