NMLB1113050834 EMERALD PWU 20 #1H @ 30-015-38338

Chris,

The OCD has denied the Site Characterization and Remediation Plan C-141s for incidents # NAB1912031438, NAB1900959144, NAB1718733399, NMLB1113050834 for the following reason:

- The Site Characterization and Remediation pages of the C-141 form were not included with the submittal. The most recent version of the C-141 form should be used for all incidents. All up to date forms can be found here, <http://www.emnrd.state.nm.us/OCD/forms.html>.

The Site Characterization and Remediation plan for this site was reviewed, and will be approved with the following conditions after the reports are submitted with the appropriate documentation described above:

- The S-9 sample area and possibly the S-2, S-3, S-6, and S-10 areas will need to be remediated to a depth of greater than 1' bgs.
- Individual grab samples will be collected from any wet or discolored areas.
- At a minimum, one sidewall sample will be collected from each cardinal direction of each excavation.

The Denied C-141 can be found in the online image file. Please review and make the required correction within 30 days prior to submitting through the fee portal. If you have any questions or believe this denial is in error, please contact me prior to submitting an additional C-141.

Thanks,

Cristina Eads

OCD approval does not relieve the operator of liability should their operations fail to adequately investigate and

remediate contamination that may pose a threat to groundwater, surface water, human health or the environment. In addition, OCD approval does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
