**Subject:** [EXT] RE: Field work scheduled for NCE2003752717 (Holly Energy Partners - Artesia Station West/Tank 970)

Hi Cristina,

I guess it never fails – I told you on Friday that I didn't anticipate anything delaying the field work at Artesia Station West/Tank 970 (NCE2003752717) and then we get a winter storm. Due to the current poor road conditions and the forecast through Wednesday we've decided to postpone the field work at Artesia Station West/Tank 970 until the week of November 9<sup>th</sup> (two weeks from today).

If anything changes with that I will let you know. I will plan on sending you a confirmatory email re: the field work schedule late next week.

Also, we requested a second extension for this site by email on 10/20/2020 (email request is attached). Approving another extension for this site will provide us with sufficient time to perform the field work, evaluate the data, and submit a report to NMOCD. Clearly we can't predict the future, but our current plan is that this will be the last extension requested for this site. Our current extension ends tomorrow (10/27/2020), so your timely review and response to the extension request will be greatly appreciated.

As always I am grateful for your guidance and responsiveness. Please call or email with questions or comments.

Thanks!

-RD Varnell

**Subject:** Field work scheduled for NCE2003752717 (Holly Energy Partners - Artesia Station West/Tank 970)

Hi Cristina,

Per our discussion and my 10/21/2020 voicemail we will start field work at the Artesia Station West/Tank 970 site (NCE2003752717) on Tuesday, 10/27/2020. I'll let you know by return email if anything changes with that. As we discussed we will install at least one boring to a depth of 51 feet bgs and will leave that boring open for at least 24 hours to determine if groundwater is present at that depth.

Please call or email with questions or comments.

Thanks!
