**Re: Site Characterization Report and Proposed Work Plan**

**Sundown Energy, LP**

**Catena Lease – South Vacuum 27 #003**

**RP #: 1RP-\_\_\_\_\_**

**Approximate Geographic Coordinates: 32.71451°N, -103.43543°W**

**Closest Well API: 30-025-36891**

**Unit Letter I, Section 26, Township 18S, Range 35E**

**Lea County, New Mexico**

Dear NMOCD Environmental Specialists:

Tomahawk Construction Resources, LLC by and though its subcontractor Sport Environmental Services, LLC is submitting, on behalf of Sundown Energy, LP (*Sundown or Client*), a Site Characterization Report and Proposed Work Plan for the Catena Lease – South Vacuum 27 #003 (*Catena Lease or subject site*) where a release of produced water occurred on a 3-inch poly-line froze due to low temperatures. The release was discovered on February 27, 2020 and NMOCD was immediately notified by Mr. Wes Able with Sundown. Mr. Able spoke over the phone with a representative from NMOCD and relayed his observations of the release. Ultimately, Mr. Able and the NMOCD representative estimated that approximately twenty (20) barrels of produced water were released. A brief summary of work that has taken place at the subject site to ensure that the impacts of the release are minimized is available below and a Site Characterization C-141 Form has been prepared which is available in **Attachment A**. Please note that the geographic coordinates associated with the site have been updated from those listed on the Initial C-141 to show the release location more accurately. At the time this report was prepared a remediation permit number had not yet been assigned to this release by NMOCD.

**Executive Summary & Site History**

The ground surface at the subject site is flat and consists of sandy soil in the top six to nine inches – these characteristics caused the produced water that was released to soak into the soil too quickly to be recovered. At approximately nine inches below ground surface (9”bgs) the soil is replaced by a hard and consistent rock layer which prevented further sampling with direct push technology and made excavation beyond 9-inches infeasible. As will be discussed further in this report, the rocky layer appears to have prevented the downward migration of the produced water and prevented chloride contamination. Soil sampling conducted shortly after the release confirmed that total petroleum hydrocarbons (TPH) and benzene, toluene, ethylbenzene, and xylenes (collectively referred to as BTEX) were not constituents of concern associated with the produced water and that only chlorides would require further analysis.

To ensure that any potential impact from the chlorides that were present in the produced water was mitigated, the client removed the sandy soil from within the release footprint and properly disposed of it at an

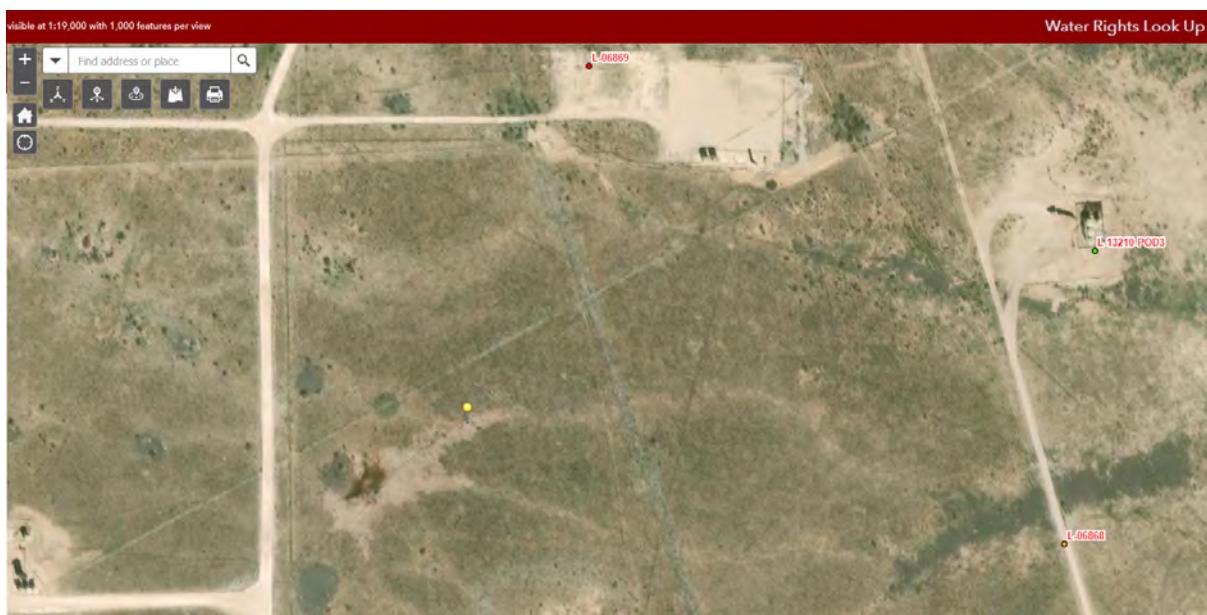

approved facility. Next, Sport Environmental returned to the subject site with a third-party environmental drilling company to conduct soil sampling via an air rotary rig. With the chloride-affected soil removed, it was possible to vertically delineate the release without creating potential conduits for migration of remaining chlorides. As will be detailed later in this report, the rocky layer appeared to have prevented the downward migration of chlorides and full vertical and horizontal delineation was achieved. Moreover, the results strongly indicate that impacts of the release were limited to approximately the top foot of soil within the release footprint most of which was removed and appropriately disposed of prior to commencement of the delineation work. Although some portions of the subject site exhibited chloride concentrations in excess of 600 mg/kg within the top four feet of the release footprint, the subject site's extensive rock layer makes removal of these portions infeasible and soil sampling indicates that the release does not appear to pose a risk to groundwater. In addition, sampling of horizontal points (e.g., HDP8-001 @ 10' bgs) outside of the release area suggests that some chloride concentrations of approximately 1,500 mg/kg may be naturally occurring and unrelated to this release.

Based on the results of this sampling, Sport Environmental, on behalf of the client, will be requesting the NMOCD approve plans to backfill the six-to-nine inch excavation within the release footprint with fresh soil and proceed with formal closure of this release. If NMOCD approves of this plan, final documentation will include a formal closure report, a Final C-141, and photographs of the backfilled excavation.

### ***Site Assessment & Characterization***

As part of site assessment and characterization of the site, aerial imagery was evaluated for the presence of major watercourses within a 0.5-mile radius of the release site. Aerial imagery demonstrating the absence of surface water within a 0.5-mile radius of the release site can be found within **Attachment B**.

A groundwater depth evaluation was performed as well. New Mexico Office of the State Engineer (NMOSE) and United States Geological Survey (USGS) sources were reviewed for groundwater depth information. The closest water wells with groundwater depth information showed that groundwater depth is approximately 57 to 60 feet below ground surface. Please see **Figure 1** below and **Attachment C** for the NMOSE Water Right Summary.

*Figure 1 – NMOSE Water Rights Look Up*

This query established groundwater depth at the site to be approximately 57 feet below ground surface ('bgs). Therefore, the appropriate remediation standard as specified in the NMOCD Table 1 (NMAC 19.15.29.11) will be applied

**Table 1:** Site Closure Criteria (Adapted from NMOCD Table 1(NMAC 19.15.29.11))

<b>Closure Criteria for Soils Impacted by a Release: Minimum depth below any point within the horizontal boundary of the release to groundwater is between 51 and 100 feet</b>	
<b>Constituent</b>	<b>Limit (mg/Kg)</b>
Chloride	10,000
TPH (Total Petroleum Hydrocarbons) (GRO+DRO+MRO)	2,500
GRO + DRO	1,500
BTEX (Benzene, Toluene, Ethylbenzene, and Xylenes)	50
Benzene	10

### Initial Characterization

On March 25, 2020, initial release characterization by means of horizontal and vertical delineation sampling was performed. The release footprint was mapped with a GPS device to generate a Release Site Plan denoting sample location placement as shown in **Attachment D**. Upon arrival at the site, it was visually noted that soils had dried out since the last rainfall event making it possible to see visual indications of the release perimeter and to estimate its area (approximately 3.18 acres).

During sampling, a rocky layer and bedrock was encountered 9" below ground surface (bgs) resulting in an inability to perform additional depth sampling using the truck-mounted Geoprobe 540UD direct push unit. However, Sport Environmental successfully collected thirty-three (33) grab samples from the soil surface (0-9"bgs) while on location consisting of horizontal delineation samples and release footprint samples. These samples were delivered to Xenco Laboratories, a National Environmental Laboratory Accreditation Program (NELAP) Certified laboratory under proper chain-of-custody for processing and analysis. Each constituent was analyzed using appropriate analytical methods. Chlorides were analyzed using EPA Method 300, Total Petroleum Hydrocarbons (TPH) using Method 8015B, and BTEX constituents on the using Method 8260. The sampling confirmed BTEX constituents were not present in the produced water and did not impact the subject site. **Attachment E** contains the full analytical results including the chain-of-custody. Some of the surface samples indicated that TPH was present at the surface and that chlorides were present at concentrations exceeding 10,000 mg/kg, but the affected soil was removed and sent to an authorized facility for disposal. The site plan including sample locations is available in Figure 2 below.

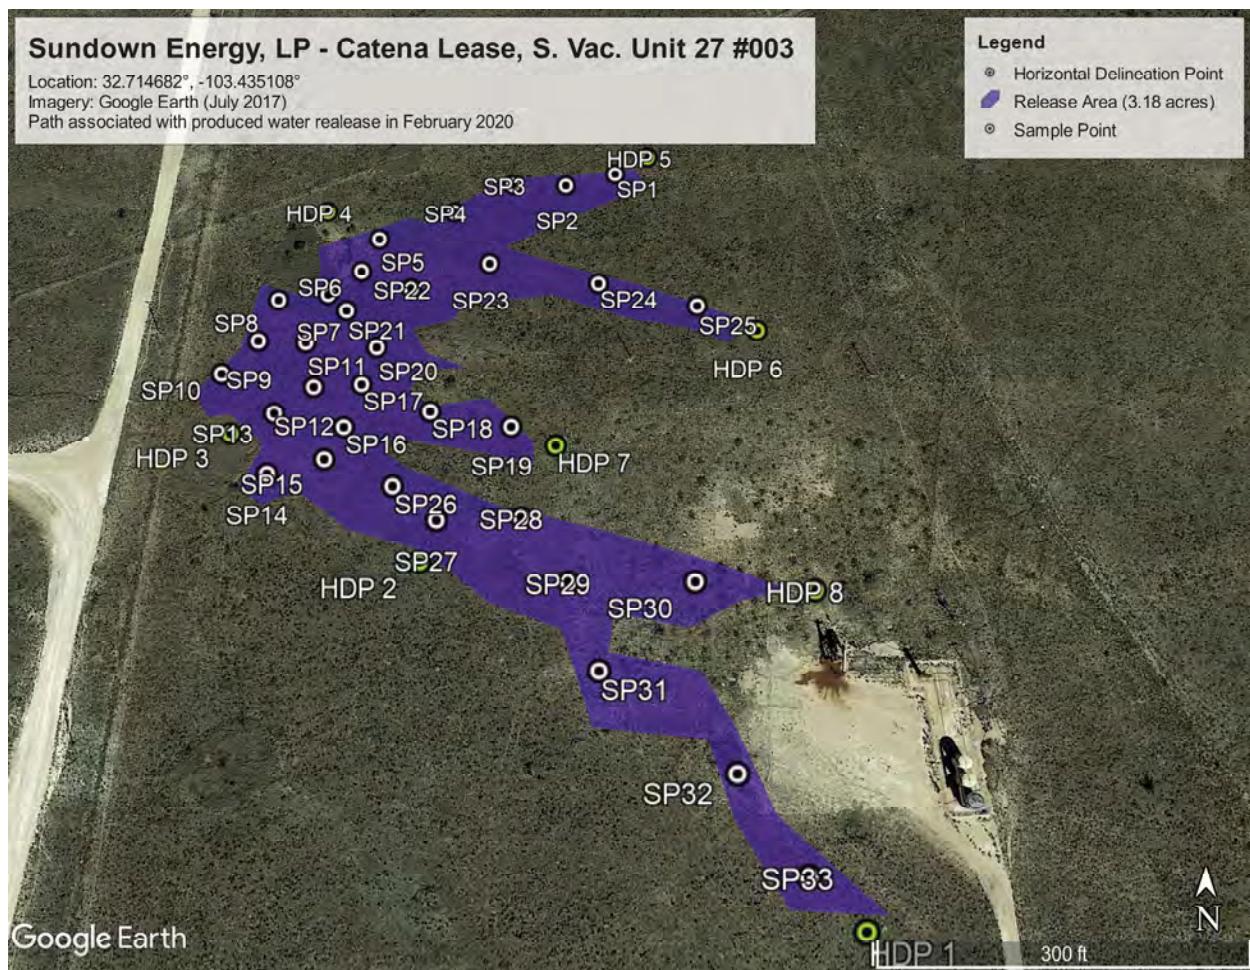

Figure 2 – Site Plan and Chloride Results – Sampled March 25, 2020

### Full Delineation

On May 27, 2020, another round of soil sampling was conducted using an air rotary rig operated by Talon LPE. This round of sampling made it possible to bore through the bedrock layer. Each borehole conducted during this round of sampling was terminated at 20' bgs and the soil characteristics were similar throughout the samples. Lithology data (*i.e.*, boring log) representative of the subject site was generated for the Catena Lease and is available in **Attachment F**. Overall, the results strongly indicated that the rocky layer was protective of underlying soils. The full analytical report from this round of sampling is provided in **Attachment G** for reference. In addition, a site plan and a sample data summary are included on the following page for easy reference. **Attachment H** contains the same site plan and sample data summary in higher resolution for reference.

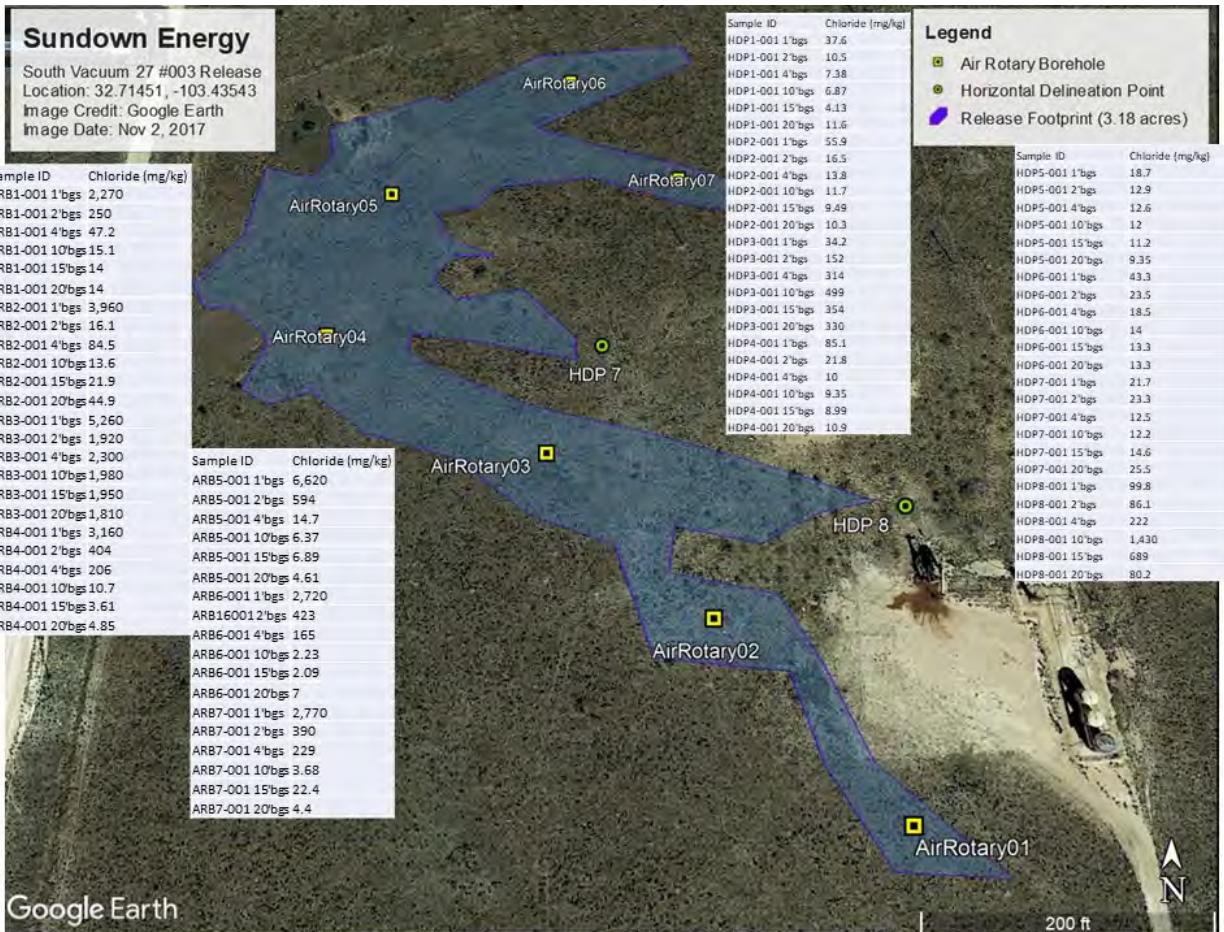

Figure 3 – Site Plan and Chloride Results – Sampled May 27, 2020

After the boreholes were drilled, they were filled with bentonite and sealed to prevent the creation of conduits for chlorides that were present at the surface (primarily at the one-foot below ground surface depth interval where the rocky layer begins). Air Rotary Borehole (ARB) location 3 had chloride concentrations of more than 1,000 mg/kg throughout the intervals sampled. However, it is worth noting that Horizontal Delineation Point (HDP) 8 shows a chloride concentration of 1,430 at ten feet below ground surface and the remaining intervals sampled at that location have significantly lower chloride concentrations. These results indicate that some of the chlorides observed below the surface may be naturally occurring or otherwise unrelated to the release. A summary table of the analytical results associated with this round of sampling is available on the following page as Table 2: Sample Data Summary for May 27, 2020 Soil Sampling Results.

Table 2: Sample Data Summary for May 27, 2020 Soil Sampling Results

Sundown Energy - Catena Lease South Vacuum 27 #003 Sample Data Summary for May 27, 2020 Soil Sampling Results

## Work Plan Proposal

Given the consistently low concentrations of chlorides present at depth within the release footprint, the successful horizontal delineation of the release site, and the rocky layer preventing removal of the uppermost remaining portion of the site, Sport Environmental respectfully requests that NMOCD grant approval to proceed with adding fresh soil to fill the six-to-nine inch area within the release footprint to ensure that erosion and ponding potential are minimized. Sport Environmental also requests that if NMOCD has any seeding/vegetation regrowth requirements that they be made known so that they may be fulfilled. Please note that vegetation present at the subject site was sparse prior to the release.

### ***Geo-tagged Site Photographs***

Photographs documenting the condition of the subject site at various points during the cleanup process are included in the photographic log that follows. Whenever possible, geotagged photographs contain the geographic coordinates, date, time, and other data associated with their capture.

### **Photographic Log**

Photograph	Description
	The subject site and a neighboring battery are pictured in an aerial image captured by a drone operated by Sport Environmental on March 25, 2020.
	An aerial view of the release site also captured via drone on March 25, 2020.

Photographs of the site on May 7, 2020. These images depict the subject site prior to the excavation of six to nine inches of soil. This would be as much soil as could be reasonably removed without risking damage to the protective bedrock layer.

This photograph shows the size of rocks present once excavation near the SP15 location had been performed.

This photograph shows the size of rocks present once excavation near the SP23 location had been performed.

Smaller rocks are piled at the subject site on May 7, 2020 as excavation of soil from the release footprint takes place.

An air rotary rig is present at the subject site to conduct boreholes for horizontal and vertical delineation on May 27, 2020.

An air rotary rig is present at the subject site to conduct boreholes for horizontal and vertical delineation on May 27, 2020. Vegetation is sparse, but similar to vegetation in the surrounding area.

### ***Request for Work Plan Approval***

A review of the analytical results associated with site characterization efforts was performed. The results indicate that a small volume of soil, primarily at the surface of the excavation where rocks and bedrock made removal infeasible contained chloride concentrations greater than the 600 mg/kg limit recommended for the top four feet of soil. However, this rocky layer prevented the downward migration of chlorides and made it possible for the client to effectively remove the sandy soil from within the release footprint and minimize potential release impacts. The client proactively removed and disposed of this soil at an approved and a review of surface water and groundwater data indicates that this release, if approved for closure would not be likely to cause a human health or environmental impact. No further excavation is currently planned for the subject site. The backfilling, seeding, and submission of a final report would be completed within 90 days following NMOCD's approval of the proposed plan. Sport Environmental respectfully requests approval of this work plan on behalf of Tomahawk Construction Resources, LLC and Sundown Energy, LP.

Thank you for considering this proposal. If NMOCD have any further questions or comments regarding this request for the work, please contact us at (432) 683-1100.

Sincerely,

*Cianna J Logie*

Was this a major release as defined by 19.15.29.7(A) NMAC?

Yes  No

If YES, for what reason(s) does the responsible party consider this a major release?

If YES, was immediate notice given to the OCD? By whom? To whom? When and by what means (phone, email, etc)?

### Initial Response

*The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury*

- The source of the release has been stopped.
- The impacted area has been secured to protect human health and the environment.
- Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices.
- All free liquids and recoverable materials have been removed and managed appropriately.

If all the actions described above have not been undertaken, explain why:

The ground surface at the subject site is flat and the produced water that was released soaked into the ground too quickly to be recovered. No crude oil is believed to be present in the released fluids. No free liquids were present once the release had been stopped. No impact to human health or the environment is anticipated based on the volume and characteristics of this release.

Per 19.15.29.8 B. (4) NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please attach a narrative of actions to date. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see 19.15.29.11(A)(5)(a) NMAC), please attach all information needed for closure evaluation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

## Site Assessment/Characterization

*This information must be provided to the appropriate district office no later than 90 days after the release discovery date.*

What is the shallowest depth to groundwater beneath the area affected by the release?	57 _____ (ft bgs)
Did this release impact groundwater or surface water?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within 300 feet of a continuously flowing watercourse or any other significant watercourse?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within 200 feet of any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within 300 feet of an occupied permanent residence, school, hospital, institution, or church?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within 500 horizontal feet of a spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within 1000 feet of any other fresh water well or spring?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within incorporated municipal boundaries or within a defined municipal fresh water well field?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within 300 feet of a wetland?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release overlying a subsurface mine?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release overlying an unstable area such as karst geology?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Are the lateral extents of the release within a 100-year floodplain?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Did the release impact areas <b>not</b> on an exploration, development, production, or storage site?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No

Attach a comprehensive report (electronic submittals in .pdf format are preferred) demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined. Refer to 19.15.29.11 NMAC for specifics.

**Characterization Report Checklist:** *Each of the following items must be included in the report.*

- Scaled site map showing impacted area, surface features, subsurface features, delineation points, and monitoring wells.
- Field data
- Data table of soil contaminant concentration data
- Depth to water determination
- Determination of water sources and significant watercourses within ½-mile of the lateral extents of the release
- Boring or excavation logs
- Photographs including date and GIS information
- Topographic/Aerial maps
- Laboratory data including chain of custody

If the site characterization report does not include completed efforts at remediation of the release, the report must include a proposed remediation plan. That plan must include the estimated volume of material to be remediated, the proposed remediation technique, proposed sampling plan and methods, anticipated timelines for beginning and completing the remediation. The closure criteria for a release are contained in Table 1 of 19.15.29.12 NMAC, however, use of the table is modified by site- and release-specific parameters.

## Remediation Plan

**Remediation Plan Checklist:** *Each of the following items must be included in the plan.*

- Detailed description of proposed remediation technique
- Scaled sitemap with GPS coordinates showing delineation points
- Estimated volume of material to be remediated
- Closure criteria is to Table 1 specifications subject to 19.15.29.12(C)(4) NMAC
- Proposed schedule for remediation (note if remediation plan timeline is more than 90 days OCD approval is required)

**Deferral Requests Only:** *Each of the following items must be confirmed as part of any request for deferral of remediation.*

- Contamination must be in areas immediately under or around production equipment where remediation could cause a major facility deconstruction.
- Extents of contamination must be fully delineated.
- Contamination does not cause an imminent risk to human health, the environment, or groundwater.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

## Closure

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (electronic submittals in .pdf format are preferred) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

**Closure Report Attachment Checklist:** *Each of the following items must be included in the closure report.*

- A scaled site and sampling diagram as described in 19.15.29.11 NMAC
- Photographs of the remediated site prior to backfill or photos of the liner integrity if applicable (Note: appropriate OCD District office must be notified 2 days prior to liner inspection)
- Laboratory analyses of final sampling (Note: appropriate ODC District office must be notified 2 days prior to final sampling)
- Description of remediation activities

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

**Debi Moore:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 656945. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 656945 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink, appearing to read "JB".

## CASE NARRATIVE

**Client Name:** Sport Environmental Services, LLC

**Project Name:** Sundown Energy, LP

Project ID: 8015  
Work Order Number(s): 656945

Report Date: 04.02.2020  
Date Received: 03.26.2020

---

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

### Sample receipt non conformances and comments:

#### Sample receipt non conformances and comments per sample:

None

#### Analytical non conformances and comments:

Batch: LBA-3121250 Inorganic Anions by EPA 300

Lab Sample ID 656945-035 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Chloride recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 656945-019, -020, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -031, -032, -033, -034, -035, -036, -037, -038.

The Laboratory Control Sample for Chloride is within laboratory Control Limits, therefore the data was accepted.

Batch: LBA-3121544 BTEX by SW 8260C

Lab Sample ID 656945-019 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Ethylbenzene, Toluene, m,p-Xylenes, o-Xylene recovered below QC limits in the Matrix Spike and Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 656945-019, -020, -021, -022, -023, -024, -025, -026, -027, -028, -029, -030, -031, -032, -033, -034, -035, -036, -037, -038.

The Laboratory Control Sample for Toluene, m,p-Xylenes, Ethylbenzene, o-Xylene is within laboratory Control Limits, therefore the data was accepted.

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.      **ND** Not Detected.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

**SMP** Client Sample      **BLK** Method Blank

**BKS/LCS** Blank Spike/Laboratory Control Sample      **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

**MD/SD** Method Duplicate/Sample Duplicate      **MS** Matrix Spike      **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

\* (Next to analyte name or method description) = Outside XENCO's scope of NELAC accreditation

**Notice:** Signature of this document and relinquishment of samples constitutes a valid purchase order from client company to Xenco, its affiliates and subcontractors. It assigns standard terms and conditions of service. Xenco will be liable only for the cost of samples and shall not assume any responsibility for any losses or expenses incurred by the client if such losses are due to circumstances beyond the control of Xenco. A minimum charge of \$75.00 will be applied to each project and a charge of \$5 for each sample submitted to Xenco but not analyzed. These terms will be enforced unless previously negotiated.

**Inter Office Shipment or Sample Comments:**

Relinquished By:

Brianna Teel

Date Relinquished: 03.26.2020

Received By:

Monica Benavides

Date Received: 03.27.2020

Cooler Temperature: 1.9

# XENCO Laboratories

## Inter Office Report- Sample Receipt Checklist

**Sent To:** Houston

Acceptable Temperature Range: 0 - 6 degC

**IOS #:** 61049

Air and Metal samples Acceptable Range: Ambient

Temperature Measuring device used : HOU-068

**Sent By:** Brianna Teel

**Date Sent:** 03.26.2020 10.39 AM

**Received By:** Lisandra Torres

**Date Received:** 03.27.2020 09.22 AM

Sample Receipt Checklist		Comments
#1 *Temperature of cooler(s)?		1.9
#2 *Shipping container in good condition?		Yes
#3 *Samples received with appropriate temperature?		Yes
#4 *Custody Seals intact on shipping container/ cooler?		Yes
#5 *Custody Seals Signed and dated for Containers/coolers		Yes
#6 *IOS present?		Yes
#7 Any missing/extra samples?		No
#8 IOS agrees with sample label(s)/matrix?		Yes
#9 Sample matrix/ properties agree with IOS?		Yes
#10 Samples in proper container/ bottle?		Yes
#11 Samples properly preserved?		Yes
#12 Sample container(s) intact?		Yes
#13 Sufficient sample amount for indicated test(s)?		Yes
#14 All samples received within hold time?		Yes

\* Must be completed for after-hours delivery of samples prior to placing in the refrigerator

**NonConformance:**

**Corrective Action Taken:**

**Client:** Sport Environmental Services, LLC

**Date/ Time Received:** 03.26.2020 10.25.00 AM

**Work Order #:** 656945

Acceptable Temperature Range: 0 - 6 degC  
Air and Metal samples Acceptable Range: Ambient  
Temperature Measuring device used : R9

Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?	5.5
#2 *Shipping container in good condition?	Yes
#3 *Samples received on ice?	Yes
#4 *Custody Seals intact on shipping container/ cooler?	N/A
#5 Custody Seals intact on sample bottles?	N/A
#6*Custody Seals Signed and dated?	N/A
#7 *Chain of Custody present?	Yes
#8 Any missing/extra samples?	No
#9 Chain of Custody signed when relinquished/ received?	Yes
#10 Chain of Custody agrees with sample labels/matrix?	Yes
#11 Container label(s) legible and intact?	Yes
#12 Samples in proper container/ bottle?	Yes
#13 Samples properly preserved?	Yes
#14 Sample container(s) intact?	Yes
#15 Sufficient sample amount for indicated test(s)?	Yes
#16 All samples received within hold time?	Yes
#17 Subcontract of sample(s)?	Yes      Xenco Stafford-BTEX8260
#18 Water VOC samples have zero headspace?	Yes

\* Must be completed for after-hours delivery of samples prior to placing in the refrigerator

## Attachment F

### Boring Log

**Boring Log**

Client: Sundown Energy, LP

Site Name: Catena Lease - South Vacuum 27 #003

Date: May 27, 2020

Location: 32.71451, -103.43543

Drilling Company: Talon LPE

Drill Type: Air Rotary Drilling Rig

Depth (ft.)	Notes
Surface	The top 9" of sandy soil have been removed. Large rocks are present and consistent throughout the release footprint.
1	Large rocks -- poorly graded. Strong hydrochloric acid reaction. Dark gray (10YR 4/1) soil. Some very fine organic material (i.e., plant roots)
2	Large rocks -- poorly graded. Strong hydrochloric acid reaction. Dark gray (10YR 4/1) soil. Some coarse sand.
3	Large gravel and coarse sand. Poorly graded. Strong hydrochloric acid reaction. Brown (10YR 4/3) soil.
4	Some coarse sand. Poorly graded. Strong hydrochloric acid reaction. Brown (10YR 4/3) soil. No organic matter.
5	
6	
7	Some coarse sand. Poorly graded. Strong hydrochloric acid reaction. Brown (10YR 4/3) soil. No organic matter.
8	
9	
10	
11	
12	Very fine sand -- poorly graded. Some coarse sand. Very pale brown (10YR 7/3). Strong hydrochloric acid reaction.
13	
14	
15	
16	
17	
18	Very fine sand -- poorly graded. Very pale brown (10YR 8/3). Strong hydrochloric acid reaction.
19	
20	

Borehole Terminated

*Other Notes: No unusual odors or visible presence of oil was observed at the time these borings were conducted. Soil characteristics were similar at all locations.*

Project Address:

**Debi Moore:**

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 662867. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 662867 will be filed for 45 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink, appearing to read "JB".

## CASE NARRATIVE

***Client Name: Sport Environmental Services, LLC***

***Project Name: Catena Lease-S Vac 27 #003***

Project ID: 8015  
Work Order Number(s): 662867

Report Date: 06.03.2020  
Date Received: 05.28.2020

---

This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory.

**Sample receipt non conformances and comments:**

---

**Sample receipt non conformances and comments per sample:**

None

**Analytical non conformances and comments:**

Batch: LBA-3127477 Inorganic Anions by EPA 300

Lab Sample ID 662973-001 was randomly selected for Matrix Spike/Matrix Spike Duplicate (MS/MSD). Chloride recovered below QC limits in the Matrix Spike Duplicate. Outlier/s are due to possible matrix interference. Samples in the analytical batch are: 662867-088, -089, -090.

The Laboratory Control Sample for Chloride is within laboratory Control Limits, therefore the data was accepted.

## Flagging Criteria

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

\*\* Surrogate recovered outside laboratory control limit.

**BRL** Below Reporting Limit.      **ND** Not Detected.

**RL** Reporting Limit

**MDL** Method Detection Limit      **SDL** Sample Detection Limit      **LOD** Limit of Detection

**PQL** Practical Quantitation Limit      **MQL** Method Quantitation Limit      **LOQ** Limit of Quantitation

**DL** Method Detection Limit

**NC** Non-Calculable

**SMP** Client Sample      **BLK** Method Blank

**BKS/LCS** Blank Spike/Laboratory Control Sample      **BKSD/LCSD** Blank Spike Duplicate/Laboratory Control Sample Duplicate

**MD/SD** Method Duplicate/Sample Duplicate      **MS** Matrix Spike      **MSD:** Matrix Spike Duplicate

+ NELAC certification not offered for this compound.

\* (Next to analyte name or method description) = Outside Xenco's scope of NELAC accreditation

Air and Metal samples Acceptable Range: Ambient  
Temperature Measuring device used : R9

Sample Receipt Checklist	Comments
#1 *Temperature of cooler(s)?	1.6
#2 *Shipping container in good condition?	Yes
#3 *Samples received on ice?	Yes
#4 *Custody Seals intact on shipping container/ cooler?	N/A
#5 Custody Seals intact on sample bottles?	N/A
#6*Custody Seals Signed and dated?	N/A
#7 *Chain of Custody present?	Yes
#8 Any missing/extra samples?	No
#9 Chain of Custody signed when relinquished/ received?	Yes
#10 Chain of Custody agrees with sample labels/matrix?	Yes
#11 Container label(s) legible and intact?	Yes
#12 Samples in proper container/ bottle?	Yes
#13 Samples properly preserved?	Yes
#14 Sample container(s) intact?	Yes
#15 Sufficient sample amount for indicated test(s)?	Yes
#16 All samples received within hold time?	Yes
#17 Subcontract of sample(s)?	N/A
#18 Water VOC samples have zero headspace?	N/A

\* Must be completed for after-hours delivery of samples prior to placing in the refrigerator
