13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

The previous operator intended to complete this well in the Basil Fruitland Coal zone. During a routine pump change, it was discovered that the well was perforated and fraced in the Picture Cliffs through perforations from 1775' to 1786' which is actually 39' below the intended Basil Fruitland Coal. It is proposed to set a CIBP above the current perforations and pressure test the CIBP and casing to 3500 psig. It is then intended to perforate the Basil Fruitland Coal from 1724'-1736' and frac that interval with a Halliburton frac of approximately 67,000 pounds of sand. It is anticipated that the well will be fraced on 9/20/11.

This well was originally placed on production by Rosetta Resources on 11/09/07.
