Describe Cause of Problem and Remedial Action Taken.*

Driver was loading from lack unit and was not close to the header valve and overfilled tank causing 17 barrels to spill from the vent valve. D&H Environmental was called out to access the problem and remove any free liquids if present. On Call was dispatch to locate any utilities from site. Site map was performed to outline areas of contamination and sampling was performed to determine the depth of the spill.

Describe Area Affected and Cleanup Action Taken.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Re: Western Refining – Crude Oil Spill Remediation
Devon Coach Whip Lease # 30-025-41912, Lee County, New Mexico

Dear Mr. Oberding

D&H Petroleum and Environmental Services (D&H) was called out to assess a spill that occurred at the Coach Whip site #30-025-41912-0000. It is estimated that approximately 15 barrels of crude oil were spilled at the site. A New Mexico One-Call ticket was placed to locate underground utilities in the vicinity of the incident. Prior to cleanup activities, a third party utility locator company will be scheduled to locate potential underground utilities at the location of spill within the property. Cleanup activities will be reviewed with Devon Energy Operating Company officials for approval prior to cleanup.

D&H arrived to site on June 18, 2015 to perform assessment of spill. Measurements of the affected area were approximately 65ft by 120ft. Exploratory pot holing was performed throughout the affected area to estimate the approximate depth of the impacted soil. Observations showed the affected area ranges from ¼" to ½" below ground surface (bgs). Background soil samples were collected on June 19, 2015, to determine Total Petroleum Hydrocarbon (TPH) background levels. The samples were sent to Hall Environmental Analysis Laboratory for analytical on TPH Oil Range Organics (ORO) & BTEX. A 24-hour turn-around time was requested for soil samples. D&H will review analytical results to determine the extent of excavation needed to remediate affected area. Based solely on assessment observations, it is estimated that approximately 40 to 50 cubic yards of contaminated soil will be removed.

A Release Notification and Corrective Action form will be submitted to the New Mexico Energy Minerals and Natural Resources (NMEMNR) Oil Conservation Division. Upon

approval from the NMENR Oil Conservation Division, D&H will begin cleanup excavations activities.

The following is a general scope of work for the cleanup of petroleum product spill at the site:

- D&H will follow up with the One-Call prior to any excavation activities to locate underground utility lines potentially affected by excavation.
- D&H will mobilize to the site to prepare Health and Safety Plan prior to commencing work.
- Based on the spill assessment performed on June 18, 2015 an estimated 2in of surface soils will be removed from the affected area. A Devon representative will be notified prior to the excavation.
- The affected area will be excavated using a backhoe unit and contaminated soil will be placed in a 12 yard dump truck.
- Upon approval, excavated soil will to be transported for disposal at R360 Landfill located at Mile Marker 66 Carlsbad HWY in Hobbs, New Mexico.
- Confirmation samples will be taken after excavation activities to determine if the area was remediated to cleanup levels.
- Analytical results from confirmation samples will be discussed with Western Refining representative, Manny Roman, Tomas Oberding from OCD and Bret Fulcks from Devon, for the approval of backfilling affected area.
- Native soil within the area will be utilized to backfill the excavated area. Prior to departing the site, a final walkthrough with a Devon representative will be performed for completion approval.

D&H will provide all labor and materials to perform the above scope on a time & material basis. We can begin immediately upon receiving the notice to proceed. If you have any questions with this scope of work, please give me a call at (915) 859-8150 ext 130 or (915)472-1926
