If a Watercourse was Impacted, Describe Fully.\*

## **Describe Cause of Problem and Remedial Action Taken.\***

🗌 Yes 🖂 No

Lease operator arrived on location at the Altbeir 10 State 1H and discovered that oil was coming out of the bottom part of the site glass on the petcock valve of the ULPS vessel. Upon further investigation, he realized that the rubber gasket sealing the site glass had blown due to over tightening of the brass nut on the petcock. There were 7 bbls of oil spilled into lined containment. Lease operator closed the  $\frac{1}{2}$ " ball valve to stop the leak.

## **Describe Area Affected and Cleanup Action Taken.\***

Standard Trucking was called out and was able to recover 7 bbls of oil from lined containment. The lined containment was checked for holes, none were found.

> APPROVED By OCD District 1 at 2:13 pm, Aug 27, 2015

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
