Re: Lovington San Andres Unit 58 Well Pad Abandonment Assessment Report

Dear Ms. Jones:

IRP 4018
nJXK1534931388
pJXK1534931450

Please find enclosed for your files copies of the following report for the Lovington San Andres Unit 58 Well Pad Abandonment Assessment Report. No RP number has been assigned for this project.

- *LSAU 58 Well Pad Abandonment – 2015 Soil Assessment and Delineation Activities Report, Unit E - Section 31 – Township 16 South – Range 37 East, Lea County, NM*

This report was prepared by Conestoga-Rovers & Associates (CRA) on behalf of Chevron Environmental Management Company (CEMC) to document assessment activities for site reclamation following abandonment activities of LSAU 58. Soil sampling in the release area indicate that vertical and horizontal delineation of TPH and Chlorides have been achieved at the site, and that no further assessment or remediation activities are warranted for this project.

Should you have any questions regarding the content of this report, please do not hesitate to contact me. I look forward to working with you in the future.

Sincerely,

Rob Speer
Environmental Project Manager

1. Introduction

GHD is pleased to present this soil assessment and delineation activities report to Chevron Environmental Management Company (CEMC) for the Lovington San Andres Unit No. 58 Well-Site location (hereafter referred to as the “Site”).

2. Project Information and Background

The Site is located in Unit E, Section 31, Township 16 South, Range 37 East, approximately 5.00-miles southeast of Lovington, New Mexico, in eastern Lea County (Figure 1 and Figure 2).

GHD understands the surface property is owned by the City of Lovington and the minerals are managed by the Bureau of Land Management. The LSAU No. 58 well was plugged and abandoned in August 2010. A dry hole marker is present at the location and surface equipment has been removed from the Site.

The original scope of work for the Site included reclamation activities that were developed in personal correspondences between Chevron Midland, Chevron Lovington, City of Lovington, and the Bureau of Land Management. GHD did not participate in any landowner or regulatory agency discussions regarding specific requirements for the Site reclamation. GHD was responsible for the project management, general oversight of the reclamation activities, soil sample collection, and documentation of all site activities. Site reclamation activities began on June 6, 2011 and were completed on June 10, 2011.

On November 20, 2013, GHD and Kegan Boyer (CEMC) met in Midland, Texas to review the status of the Site. CEMC requested that GHD develop and submit a site reclamation activities report detailing the 2011 field activities and any path forward recommendations for the Site.

In February 2014, GHD prepared and submitted a site reclamation completion report to CEMC detailing the site reclamation and sampling activities. Additionally, and based on analytical results of the soil sampling completed in June 2011, GHD recommended implementation of a soil boring program to assess elevated chloride concentrations at the Site. CEMC concurred with the recommendations outlined in GHD’s 2014 report. On July 11, 2014, CEMC submitted a GHD prepared work plan proposal for the evaluation of subsurface conditions at the Site to the City of Lovington attorney’s office. Ultimately, GHD returned to the Site in 2015 to execute the planned field activities. The results of those activities are provided herein.

3. Regulatory Guidance

Information available on the Petroleum Recovery Research Center (PRRC) Mapping Portal and the United States Geological Survey (USGS) Current Water Database for the Nation; the depth to groundwater at the Site is greater than 100-feet below ground surface (bgs); the nearest private domestic water source is greater than 200-feet from the release site; the nearest public/municipal water source is greater than 1,000-feet from the release site; and the release site lies more than 1,000 horizontal feet from the nearest surface water body. Consequently, the New Mexico Oil Conservation Division (NMOCD) total ranking criteria score is zero (0) for the Site. The site-specific

Recommended Remediation Action Levels (RRALs) that could be applied to this Site are: 10 milligram per kilogram (mg/kg) for benzene; 50 mg/kg for total benzene, toluene, ethylbenzene, and xylenes (BTEX); 5,000 mg/kg for TPH; and an NMOCD accepted 500 mg/kg for chlorides.

4. Drilling and Sampling - 2015

On September 8, 2015, GHD's contracted service provider, Harrison & Cooper, Inc. (HCI) of Lubbock, Texas submitted an initial New Mexico One Call utility locate ticket (2015370327). GHD submitted a MCBU Chevron Dig Plan with appropriate attachments for approval to the Chevron Buckeye Field Management Team. On September 17, 2015, GHD and HCI mobilized to the Site to begin soil boring activities. The soil boring was pre-cleared via air knife techniques to a depth of 5-feet bgs or until refusal. The remainder of the boring was advanced using an air rotary drill rig. One soil boring was advanced to approximately 30-feet bgs. A photo log documenting the 2015 drilling activities is included as Appendix A. The soil boring was logged in accordance with the Unified Soil Classification System and recorded. Visual representation of the singular (2015) boring can be found in Appendix B.

Soil samples were collected for laboratory analysis from the soil boring (SB-1) at varying intervals beginning at the surface (0-feet bgs). Soil samples were packed into laboratory prepared jars and stored in a cooler with ice. The soil samples were sent to Xenco in Midland, Texas for analysis of TPH by Method SW 8015B and chlorides by EPA Method 300/300.1. The soil laboratory analytical report for 2015 is included as Appendix C.

4.1 Soil Sampling Analytical Results - 2015

The soil type observed in soil samples collected during the 2015 drilling program consisted of dull brown sand, having small gravel in the matrix from the surface to approximately 3-feet bgs. Light yellow to gray very fine grained silty sand, unconsolidated, and poorly graded to approximately 20-feet bgs. Light to pale yellow becoming dull orange toward end of matrix, very fine to fine grained sand, interbedded with poorly cemented sandstone, unconsolidated, and poorly graded to approximate total depth at 30-feet bgs. Moisture content was observed as being slightly moist beginning at the 20-foot bgs sample interval.

All seven (7) soil samples collected from SB-1 for laboratory analysis were well below the Site RRALs for both TPH and chlorides. A soil analytical summary of the 2015 results is presented in Table 1. A Site Details and Analytical Results Map (2011 and 2015) is presented as Figure 3.

5. Conclusions

Evaluation of the analytical data obtained from confirmation sampling activities in 2011 and the soil assessment and delineation activities performed in September 2015 indicates that vertical and horizontal delineation of TPH and chloride impacts has been achieved at the Site. Based on data provided in this report, no further action is warranted at the Site.

Jake Ferenz:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number(s) 515850. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. The uncertainty of measurement associated with the results of analysis reported is available upon request. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 515850 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Kelsey Brooks

F = These samples were analyzed outside the recommended holding time.

P = Samples analyzed within the recommended holding time.

- X** In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to affect the recovery of the spike concentration. This condition could also affect the relative percent difference in the MS/MSD.
- B** A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
- D** The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
- E** The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
- F** RPD exceeded lab control limits.
- J** The target analyte was positively identified below the quantitation limit and above the detection limit.
- U** Analyte was not detected.
- L** The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
- H** The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
- K** Sample analyzed outside of recommended hold time.
- JN** A combination of the "N" and the "J" qualifier. The analysis indicates that the analyte is "tentatively identified" and the associated numerical value may not be consistent with the amount actually present in the environmental sample.

** Surrogate recovered outside laboratory control limit.

BRL Below Reporting Limit.

RL Reporting Limit

MDL Method Detection Limit **SDL** Sample Detection Limit **LOD** Limit of Detection

PQL Practical Quantitation Limit **MQL** Method Quantitation Limit **LOQ** Limit of Quantitation

Attachment A Laboratory Data Package Cover Page

Project Name: **LSAU 58**

Laboratory Number: **515850**

This Data package consists of : Laboratory Batch No(s) **698624, 977745, 698642, 698630**

This signature page, the laboratory review checklist, and the following reportable data:

- ☐ R1 Field chain-of-custody documentation;
- ☐ R2 Sample identification cross-reference;
- ☐ R3 Test reports (analytical data sheets) for each environmental sample that includes:
- Items consistent with NELAC 5
 - dilution factors,
 - preparation methods,
 - cleanup methods, and
 - if required for the project, tentatively identified compounds (TICs).
- ☐ R4 Surrogate Recovery data including:
- Calculated recovery (%R), and
 - The laboratory's surrogate QC limits.
- ☐ R5 Test reports/summary forms for blank samples;
- ☐ R6 Test reports/summary forms for laboratory control samples (LCSs) including:
- LCS spiking amounts,
 - Calculated %R for each analyte, and
 - The laboratory's LCS QC limits.
- ☐ R7 Test reports for project matrix spike/matrix spike duplicates (MS/MSDs) including:
- Samples associated with the MS/MSD clearly identified,
 - MS/MSD spiking amounts,
 - Concentration of each MS/MSD analyte measured in the parent and spiked samples,
 - Calculated %Rs and relative percent differences (RPDs) and
 - The laboratory's MS/MSD QC limits
- ☐ R8 Laboratory analytical duplicate (if applicable) recovery and precision:
- the amount of analyte measured in the duplicate,
 - the calculated RPD, and
 - the laboratory's QC limits for analytical duplicates.
- ☐ R9 List of method quantitation limits (MQLs) and detectability check sample results for each analyte for each method and matrix;
- ☐ R10 Other problems or anomalies.
- ☐ Exception Report for every "No" or "Not Reviewed (NR)" item in Laboratory Review Checklist and for each analyte, matrix, and method for which the laboratory does not hold NELAC accreditation under the Texas Laboratory Accreditation Program.

Release Statement: I am responsible for the release of this laboratory data package. This laboratory is NELAC accredited under the Texas Laboratory Accreditation Program for all the methods, analytes, and matrices reported in this data package except as noted in the Exception Reports. The data have been reviewed and are technically compliant with the requirements of the methods used, except where noted by the laboratory in the Exception reports. By my signature below, I affirm to the best of my knowledge all problems/anomalies, observed by the laboratory have been identified in the Laboratory Review Checklist, and no information affecting the quality of the data has been knowingly withheld.

Check, if applicable: ☐ This laboratory meets an exception under 30 TAC 25.6 and was last inspection by ☐ TCEQ or ☐ _____ on (enter date of last inspection). Any findings affecting the data in this laboratory data package are noted in the Exception Reports herein. The official signing the cover page of the report in which these data are used is responsible for releasing this data package and is by signature affirming the above release statement is true.

| | | Was the absolute value of the analyte concentration in the inorganic CCB <MDL? | | | X | |
| S3 | O | Mass Spectral Tuning | | | | |
| | | Was the appropriate compound for the method used for tuning? | | | X | |
| | | Were ion abundance data within the method-required QC limits? | | | X | |
| S4 | O | Internal Standard (IS) | | | | |
| | | Were IS area counts and retention times within the method-required QC limits? | | | X | |
| S5 | OI | Raw Data (NELAC 5.5.10) | | | | |
| | | Were the raw data (for example, chromatograms, spectral data) reviewed by an analyst? | X | | | |
| | | Were data associated with manual integrations flagged on the raw data? | X | | | |
| S6 | O | Dual Column Confirmation | | | | |
| | | Did dual column confirmation results meet the method-required QC? | | | X | |
| S7 | O | Tentatively Identified Compounds (TICs) | | | | |
| | | If TICs were requested, were the mass spectra and TIC data subject to appropriate checks? | | | X | |
| S8 | I | Interference Check Sample (ICS) Results | | | | |
| | | Were percent recoveries within method QC limits? | | | X | |
| S9 | I | Serial Dilutions, Post Digestions Spikes, and Method of Standard Additions | | | | |
| | | Were percent differences, recoveries, and the linearity within the QC limits specified in the method? | | | X | |
| S10 | OI | Method Detection Limit (MDL) Studies | | | | |
| | | Was a MDL study performed for each reported analyte? | X | | | |
| | | Is the MDL either adjusted or supported by the analysis of DCSs? | X | | | |
| S11 | OI | Proficiency Test Reports | | | | |
| | | Was the laboratory's performance acceptable on the applicable proficiency tests or evaluation studies? | X | | | |
| S12 | OI | Standards Documentation | | | | |
| | | Are all standards used in the analyses NIST-traceable or obtained from other appropriate sources? | X | | | |
| S13 | OI | Compound/Analyte Identification Procedures | | | | |
| | | Are the procedures for compound/analyte identification documented? | X | | | |
| S14 | OI | Demonstration of Analyst Competency (DOC) | | | | |
| | | Was DOC conducted consistent with NELAC Chapter 5? | X | | | |
| | | Is documentation of the analyst's competency up-to-date and on file? | X | | | |
| S15 | OI | Verification/Validation Documentation for Methods (NELAC Chapter 5) | | | | |
| | | Are all methods used to generate the data documented, verified, and validated, where applicable? | X | | | |
| S16 | OI | Laboratory Standard Operating Procedures (SOPs) | | | | |
| | | Are laboratory SOPs current and on file for each method performed? | X | | | |

- Items identified by the letter "R" must be included in the laboratory data package submitted to the TCEQ-required report(s). Items identified by the letter "S" should be retained and made available upon request for the appropriate retention period.
- O = organic analyses; I = inorganic analyses (and general chemistry, when applicable).
- NA = Not applicable;
- NR = Not reviewed;
- ER# = Exception Report Identification number (an Exception Report should be completed for an item if "NR" or "No" is checked).

| Attachment A (cont'd): Laboratory Review Checklist: Exception Reports | |
|---|--|
| Laboratory Name: XENCO LABORATORIES | LRC Date: 28-SEP-15 |
| Project Name: LSAU 58 | Laboratory Job Number: 515850 |
| Reviewer Name: KEB | Batch Number(s) : 698624, 977745, 698642, 698630 |
| ER# 1 | DESCRIPTION |
| 1 | SW8015B_NM Batch 977717, Surrogate o-Terphenyl recovered above QC limits. Matrix interferences is suspected; data confirmed by re-analysis. Samples affected are: 515850-007. |
| | |

1 ER# = Exception Report identification number (an Exception Report should be completed for an item if "NR" or "No is checked on the LRC).

Please contact your nearest XENCO distributor or write to XENCO Laboratories and its affiliates, subcontractors and agents. XENCO is a standard term and conditions of service unless previously negotiated under a fully executed client contract.

XENCO Laboratories

Prelogin/Nonconformance Report- Sample Log-In

Client: GHD Services, INC- Midland

Date/ Time Received: 09/18/2015 02:38:00 PM

Work Order #: 515850

Acceptable Temperature Range: 0 - 6 degC

Air and Metal samples Acceptable Range: Ambient

Temperature Measuring device used :

| Sample Receipt Checklist | Comments |
|--|----------|
| #1 *Temperature of cooler(s)? | 1.5 |
| #2 *Shipping container in good condition? | Yes |
| #3 *Samples received on ice? | Yes |
| #4 *Custody Seals intact on shipping container/ cooler? | N/A |
| #5 Custody Seals intact on sample bottles? | N/A |
| #6 *Custody Seals Signed and dated? | N/A |
| #7 *Chain of Custody present? | Yes |
| #8 Sample instructions complete on Chain of Custody? | Yes |
| #9 Any missing/extra samples? | No |
| #10 Chain of Custody signed when relinquished/ received? | Yes |
| #11 Chain of Custody agrees with sample label(s)? | Yes |
| #12 Container label(s) legible and intact? | Yes |
| #13 Sample matrix/ properties agree with Chain of Custody? | Yes |
| #14 Samples in proper container/ bottle? | Yes |
| #15 Samples properly preserved? | Yes |
| #16 Sample container(s) intact? | Yes |
| #17 Sufficient sample amount for indicated test(s)? | Yes |
| #18 All samples received within hold time? | Yes |
| #19 Subcontract of sample(s)? | No |
| #20 VOC samples have zero headspace (less than 1/4 inch bubble)? | N/A |
| #21 <2 for all samples preserved with HNO3,HCL, H2SO4? Except for samples for the analysis of HEM or HEM-SGT which are verified by the analysts. | N/A |
| #22 >10 for all samples preserved with NaAsO2+NaOH, ZnAc+NaOH? | N/A |

*** Must be completed for after-hours delivery of samples prior to placing in the refrigerator**
