#### Describe Cause of Problem and Remedial Action Taken.\*

66 BBLS oil overflowed from the flare scrubber on the slop tank due to the three phase separator becoming swamped out because the linkage set screw on the oil dump fail closed. The linkage set screw on the oil dump was repaired to prevent further release. The oil tank has been returned to operation.

#### Describe Area Affected and Cleanup Action Taken.\*

66 BBLS of oil was released from the flare scrubber on the slop tank into the surrounding lined containment. All 66 BBLS oil remained in lined containment. Liner was checked for holes, no holes were found in the liner. Vacuum truck recovered all 66 BBLS of the released oil. No further action is necessary.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
