**Total short term disturbance:** 4.381

**Operator Name:** APACHE CORPORATION

**Well Name:** BLACK & TAN 27 FEDERAL COM

**Well Number:** 304H

**Reconstruction method:** The areas planned for interim reclamation will then be recontoured to the original contour if feasible, or if not feasible, to an interim contour that blends with surrounding topography as much as possible. Where applicable, any fill material of well pad will be backfilled into the cut to bring area back to original contour.

**Topsoil redistribution:** Topsoil will be evenly distributed and aggressively revegetated over the entire disturbed area not needed for all-weather operations.

**Soil treatment:** After all disturbed areas have been properly prepared, areas will need to be seeded with recommended seed mixture, free of noxious weeds. Final seedbed prep will consist of contour cultivating to a depth of 4-6 inches within 24 hrs prior to seeding, dozer tracking or other imprinting in order to break soil crust to create seed germination micro-sites.
