Date: 12/7/2018	GAS CAPTURE PLAN	RECEI 8 7018 OCD	)	
<ul><li>☑ Original</li><li>☐ Amended - Reason for Amendment:</li></ul>	Operator & OGRID No.:	6317		

This Gas Capture Plan outlines actions to be taken by the Operator to reduce well/production facility flaring/venting for new completion (new drill, recomplete to new zone, re-frac) activity.

Note: Form C-129 must be submitted and approved prior to exceeding 60 days allowed by Rule (Subsection A of 19.15.18.12 NMAC).

## Well(s)/Production Facility - Bell Lake 19 CTB 3

The well(s) that will be located at the production facility are shown in the table below.

Well Name	API	Well	Footages	Expected	Flared or	Comments
	L	Location		MCF/D	Vented	
Bell Lake 19-18 State Com 7H		19-24S-33E	481 FSL & 1122 FEL	1		Will go to Bell Lake
30-0	25-	45491				19 CTB 3
Bell Lake 19-18 State Com 9H		19-24S-33E	481 FSL & 1092 FEL			Will go to Bell Lake
						19 CTB 3
Bell Lake 19-18 State Com 10H		19-24S-33E	481 FSL & 1152 FEL			Will go to Bell Lake
						19 CTB 3
Bell Lake 19-18 State Com 13H		19-24S-33E	538 FSL & 1952 FEL			Will go to Bell Lake
						19 CTB 3
Bell Lake 19-18 State Com 17H		19-24S-33E	538 FSL & 1922 FEL			Will go to Bell Lake

### Gathering System and Pipeline Notification

Well(s) will be connected to a production facility after flowback operations are complete, if gas transporter system is in place. The gas produced from production facility is dedicated to DCP and will be connected to DCP low/high pressure gathering system located in Eddy County, New Mexico. It will require 0' of pipeline to connect the facility to low/high pressure gathering system. Devon Energy provides (periodically) to DCP a drilling, completion and estimated first production date for wells that are scheduled to be drilled in the foreseeable future. In addition, Devon Energy and DCP have periodic conference calls to discuss changes to drilling and completion schedules. Gas from these wells will be processed at DCP's Zia Processing Plant located in Sec. 19, Twn. 19S, Rng. 32E, Eddy County, New Mexico. The actual flow of the gas will be based on compression operating parameters and gathering system pressures.

#### Flowback Strategy

After the fracture treatment/completion operations, well(s) will be produced to temporary production tanks and gas will be flared or vented. During flowback, the fluids and sand content will be monitored. When the produced fluids contain minimal sand, the wells will be turned to production facilities. Gas sales should start as soon as the wells start flowing through the production facilities, unless there are operational issues on DCP system at that time. Based on current information, it is Devon Energy's belief the system can take this gas upon completion of the well(s).

Safety requirements during cleanout operations from the use of underbalanced air cleanout systems may necessitate that sand and nonpipeline quality gas be vented and/or flared rather than sold on a temporary basis.

### **Alternatives to Reduce Flaring**

Below are alternatives considered from a conceptual standpoint to reduce the amount of gas flared.

- Power Generation On lease
  - o Only a portion of gas is consumed operating the generator, remainder of gas will be flared
- Compressed Natural Gas On lease
  - o Gas flared would be minimal, but might be uneconomical to operate when gas volume declines
- - o Plants are expensive, residue gas is still flared, and uneconomical to operate when gas volume declines
