Midland, Texas 79703

Attention Mr. Tommy Zachry

Gentlemen:

On Form C-105 recently submitted for your Eidson Well No. 1 located in Unit L of Section 35, T-16-S, R-35-E, the producing formation was shown as Morrow from perforations 12,180' to 12,196'. However, after examining the logs for the well, Mr. Paul Kautz, Geologist in this office, has concluded that the perforations are in the Mississippian formation rather than the Morrow. He has picked the tops as follows: Strawn @ 11,536', Atoka @ 11,680', Morrow @ 12,000' and Mississippian @ 12,178'.

Please re-examine your records to determine if you concur with these findings and advise this office of your decision. Unless you have data to support the Morrow classification, the well will be classified as a Mississippian gas well.

If you do concur with Mr. Kautz' findings, please resubmit Form C-105 correcting the information accordingly. Further, the Formation Record on the back of the previously submitted Form C-105 has not been completed correctly. Please correct this portion of the form to correspond with the attached example.

Yours very truly,

OIL CONSERVATION DIVISION

Jerry Sexton
