Well No. 1 is located 1980 ft. from N line and 660 ft. from W line of sec. 33

SW/4 NW/4 17 S 33 E NMPM

(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Maljamar Lea New Mexico

(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is ..... ft.

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On November 4th we jet perforated the 7" casing in this well from 3695' to 3720' and perforated into the Queen sand. This sand is now producing 55 barrels per day through the perforation. We wish to run a Lane-Wells electric pressure plug and set at 3750 feet and produce this well from the red sand, plugging off from the San Andres pay section. This well has been producing 2½ barrels a day from the lower pay section.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
