Barney Cookburn well No. 6. Production was tested from January 8, 1917, to September 2, 1922, and averaged 38.5 BBL. The highest daily production was 48 barrels on the 25th of August, and the lowest daily production was 17 barrels on the 22nd. The separator is set to flow (3) two-hour periods per day. However, the well "loads up" and does not flow regularly. At times it was observed to flow the head off and then within a few minutes
