The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to test the red sand, expected at approximately 3800 feet. The well will be topped in with rotary tools and approx. 1400 feet of 8 5/8" surface casing will be run. From there the well will be completed with cable tools and 7" casing will be run to the top of the red sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
