Detailed account of work done, nature and quantity of materials used and results obtained.

Testing Queen Formation, Perforations 3060-64 and 3067-75' after Fracturing with 10,000 Gallons and 15,000 lbs Sand. From 6/1/56 to 6/15/56 the well swabbed and flowed back approximately 8 to 10 bbls of emulsified lead oil. On 6/15/56 the well was treated with 100 bbls of lease crude and 50 gallons of N-S Emulsion breaker by Halliburton.

6/15 Swabbed back 134.8 bbls Lead oil

6/14 Swabbed XXXX 31.8 bbls, 98% Lead Oil, 2% Water, 2% BSAW

6/14 Swabbed 10 bbls.

6/16 to 6/25 Flowing well at approximately 5 bbls per day without any apparent improvement in breaking the emulsion.

Tentative plans are to drill plug at 3075 and set pumping unit to test perforations in Grayburg from 4415-4420, 4430-4444, and 4450-4464 in an effort to exhaust the water encountered with the hopes that it might make a commercial producer at that depth.
