DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to a total depth of approximately 4150' to test the Queen formation. We will run approximately 1475' of 8 5/8" casing and cement with 50 sax and approximately 4100' of 5 1/2" casing and cement with 100 sax. Please refer to your letter of November 20, 1956 regarding the drilling of this well which will be an offset to the Neville G. Penrose Inc. well No. 2 Williams.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
