The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Propose to drill this well to approximately 4500' to test the Lucas Sand.

Propose to drill from surface to 1650' with rotary tools and from 1650' to 4500' with cable tools.

We propose the following casing program, cement and C.C.

Set 13-3/8" cag. at 200', mudded to be pulled.

Set 8-5/8" cag. at 1650' with 150 sacks cement and C.C. 36 hours.

(In the event commercial production is found will run 1" stinger pipe in annulus of hole and cement 8-5/8" cag. from 150' to surface.)

Set 5 1/2" cag. at 4500' with 150 sacks cement and C.C. 48 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
