Federal Sivilay Lease
Well No. 5 is located 660 ft. from S line and 1900 ft. from E line of sec. 13

Sec. 13 Section 13 13-South 33-East 107N
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

E K Queen Las New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft. 3939 g1

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to set a 5 1/2" plug at approximately 3900' in order to plug back this Queen Sand completion. We propose to attempt a Lower Yates completion by perforating from 3550 to 3560.

These perforations will be sand fractured with approximately 20,000 gal. lease crude and 30,000 lb. sand.

The calculated cement top outside the 5 1/2" casing is 1950'.

The setting of a bridge plug does not constitute permanent abandonment of the lower perforations. Should conditions warrant, at the time of permanent abandonment, the bridge plug must be drilled out and cement placed across all perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
