(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Well No. 4-12 is located 660 ft. from N line and 210 ft. from E line of sec. 13
13 sec. 13 13-2 13-2 13-2
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
13-2 upon 13-2 San Antonio
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill this well to a depth of 4750', with rotary being used to a depth of 1640', and cable tools from that point to total depth.

Surface casing, 13-3/8", will be run to a depth of 250' and cemented with 350 sacks, which will circulate to the surface. An intermediate string, 9-5/8", will be run to a depth of 1640', set in anhydrite and cemented with 50 sacks. The oil string for this well will be run to a depth of 4740', 5", and cemented with 200 sacks.

All casing run and cemented in this well will be under methods approved by the Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
