The elevation of the derrick floor above sea level is ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well to an approximate total depth of 4400' to test the Queen formation. We will run approximately 275' of 8 5/8" casing and circulate cement to the surface. We will run approximately 4400' of 5 1/2" casing and run 525 sack of cement, 400 sack using 4% Gel and 125 sack of neat cement. The hole will be drilled with rotary tools.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
