The elevation of the derrick floor above sea level is **3907** ft. **GL**

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill this well to an approximate depth of 4700' to test the upper Moon and Penrose Formations. 300' of 8-5/8" OD Casing will be run and cemented back to surface. If production is obtained 5-1/2" OD Casing will be run to total depth and cemented with 200 Sacks.

Rotary tools will be used.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
