(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 3740 ft. MSL

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Well has ceased to produce commercial quantities of oil from the Wolfcamp.
We propose to abandon the Wolfcamp and attempt recompletion in the Pennsylvanian
by squeezing present perforations 10,597-620' with 100 sz slt-set cement.
Drill out squeeze cement and a bridge plug set at 10,780' and wash and cleanout
to approximately 13,875'. Set Baker Model "B" packer at 13,100' and acidize
old perforations 13,800-44' with 1,000 gallons mud acid. Sand and evaluate.

TD 14,916'

FMS 10,705'

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
