The zone from 4100' to 4230' was acidized with 500 gals. low surface tension acid under a hook wall packer set in the casing at 4075'. We were unable to inject any acid in the formation because of excessive high pressure for breakdown of the formation. 2850 lbs. was put on the formation without a breakdown. Load water and acid was swabbed out and the well was swabbed dry. Natural production was "0".
