FULL DETAILS OF PROPOSED PLAN OF WORK

IN ACCORDANCE WITH THE PROVISIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

To set high pressure separator at either Federal Bowers "A" 1 or Federal Bowers "A" 4 or both with necessary gas regulators to supply gas at approximately 500 pounds working pressure for gas lift purposes. To install proper size tubing and necessary flow valves in Federal Bowers "B" 2, N. M. State "A" 2 and N. M. State "A" 3 to gas lift these wells with a minimum amount of gas. At the present time, N. M. State "A" 2 and N. M. State "A" 3 are produced by pumping and, unless authority is granted to gas lift Federal Bowers "B" 2, it will be necessary to place this well on the pump. It is believed that these wells can be produced with a gas fluid input ratio of under 500 cubic feet of gas per barrel of fluid. Authority is not requested to produce any well at greater than its prorated allowable.
